I hope you meant 28 rather than 29 MHz. There are at the moment at least
three automatic traps running above 28 that should get some reaction soon.

All I saw was "radio transmitters", but if it's your translation to
mean "cell phone, broadcast transmitters and paging towers", I won't
dispute it. The point is that these -legal- radio services can put out
tens, or even hundreds of watts. Have you ever seen the power levels
at a keydown? Comparable. With comparable results. And the problem is
compounded by the fact that the keyclowns do NOT operate with respect
to possible interference on other bands, because filtering or trapping
out a freq might reduce the 'bird watts'.

There are other major differences. Before a high-power transmitter can
be fired up for the first time, an environmental impact study MUST be
performed. The IRP and exact location of the tower MUST be documented.
Harmonics MUST be supressed. Etc, etc.

You should also note that harmonics from ham bands usually fall on
other ham bands. It was designed that way.

>I usually don't read any of your references for the same reasons others >don't..they're usually bullshit and have nothing to do with your >original claims....Your claim was that cb interferes with emergency >comms.

Wrong again, twist, that was your spin on my words. I never said CB interferes with anything, I said that -illegal operation- causes interference. Freeloaders use freqs allocated to other services, and amps cause interference all over the place, -including- emergency services. No matter how hard you try to spin it, those are the facts.

Yeah, you're right, Dick. This isn't an issue that hams should be concerned about one bit. They should remain totally oblivious to the people that are trying to destroy, directly or indirectly, any legitimate radio hobby. Yes Dick, amateurs shouldn't be made aware of the real consequences of radio interference, regardless of how infrequent those deaths may occur. They should follow the herd like good little sheep. No, Dick, I won't crosspost any of this stuff anymore, since it's obvious that the hams are not really interested in radio communication; all they are concerned about is anyone disrupting their little club.

Plonk.

It's my decision whether or not its a "lost cause", not yours. If it is truly a lost cause then why not killfile me and go about your illegal business? The fact that you take the time to try and "convince" me I do no good only proves that I am.

>if they want to rip up the CB channels with high power
>and cussing, that's their business.

No. There are federal regulations concerning radio transmitters. Your high power cussers fall under those regulations. They don't have any "rights" to disobey them at will.

>Believe me, it's much worse on 2m ham band---just listen

At the risk of pissing you off, do not even think about taking it over 28.
The 28.0-29.7 band worldwide is Amateur who 1) are forbidden to talk with
you and won't anyway 2) will see that you get a $10k QSL card from Sam.
We have a bad case of the ass with Slims.

Take it mobile in some parts of the US and your picture will be on the
FCCs wall within days. Those nice cameras on the Interstate and major
urban intersections can be used for all kinds of dubious purposes.

The 2950 receiver is junk but the rig seems to be reasonably well
constructed.

EXACTLY. And these ultra high power sources are radiating at or
near the altitude that helicopters fly putting these sources at
a greater potential for harm to aircraft then almost any CB transmitter.

Tim, 28-29.7 is Amateur WORLDWIDE. Believe me, our real estate is going to be protected from yoyos who buy a radio, go to mod it, and ask if it is any good.

Cool is in how you look at it, I think it is a matter of perspective. I sure as hell don't think cool is being some sort of zombie whose head is always going up and down; that went out with high school.

As far as badass, I have one of the phototraps running today. Hey I am not so damned ancient that I do not remember the thrill of radio and not such an idiot that I don't think that most newbies will come up thru CB. But if you notice, I am willing to exercise some perspective but I am not willing to tell you it is OK and you are a cool dude for being a rebel without a clue.

Go back and read the thread again, moped. You claimed it was illegal, but countered with the typical keyclown argument (that you had also used previously) that it's not illegal unless you use it illegally. Since you didn't know if he could use it legally or not, you then put a spin on it, saying that "all ship to shore radio is illegal", which I disproved by simply stating the law. Ever since then you have been whining and crying and trolling my posts, even to the point of accusing me of child molestation. My, what a bitter little man you are.

Now I give you the same advice you gave to me in your very first post in this newsgroup: "Go play with your 100mW walkie talkie you useless piece of shit"!

note pages 2 and 3

http://www.fda.gov/fdac/reprints/emi.html
"* A fetal heartbeat detector picked up local radio and CB broadcasts instead of the baby's heartbeat."
In same page the following

"Clutter on the Airways
Sources of possible electromagnetic interference increase every year. Citizens Band radios, cellular telephones, wireless computer links, microwave
signals, radio and television broadcast transmitters, pagers, and many other machines emit electromagnetic waves that could interfere with other devices."

http://www.limerick-leader.ie/issues/20000701/memories.html

"CB RADIOS: A WARNING BY GARDA IN LIMERICK CITY

A WARNING that citizen band radios could play havoc with emergency services in the city was issued by Limerick garda'.

CB users come across on police channels "quite a lot" and they can easily block important messages.

One garda in the radio room heard the "CB men" during the day, but the most frequent reports are late at night.

Limerick Fire Brigade also report having heard the "breakers" (as CB language describes them) on their wavelengths in certain areas of the city, though the amount of interference was not as high as the garda' reported.

Havoc was wreaked in Cork recently when CBs came over on the emergency channels in the Regional Hospital. "

http://hsc.virginia.edu/medcntr/depts/clinical-eng/hosp.html

EFFECTIVE DATE: September 30, 1993

POLICY: 0055 The medical Center discourages the use of other than Medical Center equipment in the medical Center by patients, staff or others. Circurmtances could justify exceptions under controlled guidelines. The Medical Center acknowledges no liability for loss or damage for utilization of personal equipment.

Equipment specifically prohibited is:
Radio generating equipment such as, Walkie talkies, CB's, wireless and cellular telephones, amateur radios, etc. This type of equipment can create interference with sensitive patient care life support equipment. (Please see Medical Policy No. 0139 for exceptions).

EFFECTIVE DATE: September 30,1996 (Rvd)

POLICY: 139

Patient care, diagnostic, life. support and laboratory equipment that was used in the hospital some years ago was not often affected by interference. The new generations of more sensitive and microprocessor controlled equipment may be adversely affected by radio frequency transmissions that may cause incorrect operation. The microprocessors and other digital logic components can be affected by this type of interference and it is recommended that radio frequency transmitters be no closer than one meter to this equipment if the transmitted field strength is two volts per meter or higher.

To preclude potential problems that could be caused by these devices, field strength measurements must be made on each device relative to patient care, diagnostic, life support and laboratory equipment.

Equipment specifically prohibited to patients and staff are:
CB radios
amateur "ham" radio transmitters
wireless andcellular telephones
walkie-talkies.

http://www.traverse.com/carc/carc/july99.htm

This article would not have been posted, and the legislation been discussed had this not happened

"MI REP TARGETS ILLEGAL CB GEAR
Legislation to permit local authorities to crack down on illegally amplified CB transmitters is poised for reintroduc- tion in the 106th Congress. According to an early draft of the bill being worked on by Rep Vernon Ehlers of Michigan, the new legislation would permit state or local governments to pass and enforce laws prohibiting unauthorized Citizen Band radio equipment. Direct enforcement of telecommunication matters is usually considered a federal responsibility, and state and local authorities ordinarily don't step in except in particularly serious cases such as interference with aircraft or police and fire communication."

http://www.bravoelectro.com/html/stetncapg.html

All Electromagnetic Compatibility (EMC) topics can be associated with either the process of producing or receiving Electromagnetic Interference (EMI). EMI produced by electrical equipment is classified according to its dominant mode of propagation, either as radiated emissions of energy through space

(similar to television and radio signal transmission) or conducted emissions of energy along wires (similar to telephone signals and AC power transmission).

Besides producing potential interference, electrical products are exposed to ambient EMI from other pre-existing sources; a device that malfunctions in the presence of such EMI is said to be susceptible or lacking in immunity to perturbation by external EMI sources. Immunity is gradually replacing susceptibility as a preferred term, since quantitative descriptions of greater performance become more logical if one speaks of greater immunity rather than lower susceptibility. EMI immunity topics are also classified by their mode of propagation, either radiated or conducted.

Public awareness of the consequences of EMI issues greatly increased during the early 1970's. At the peak of the Citizen's Band (CB) radio fad, hundreds of thousands of CB's began transmitting radio frequency energy in every neighborhood. Church congregations experienced radiated EMI as they overheard the CB transmissions picked up by the susceptible antenna-like wires of chapel public address systems. During the same period, new microprocessor circuits began appearing in electronic cash registers and video arcade games. Unknown to their designers, the fast electronic devices in these new smart products generated intense radiated EMI. Radio wave noise from these products began to jam police and fire radio channels, threatening public safety.

Where does it mention any service in particular? If you had actually
read some of those references, you would have seen that RFI can come
from anything from 100kHz to microwaves. But you and your masters
don't seem to understand that multi-kilowatt radio isn't too
particular as to what it affects with it's RFI, and that's why
high-power RF is CAREFULLY REGULATED. And indiscriminant and
irresponsible use and abuse of high-power RF, or even low-power radio
in close proximity to sensitive devices, REGARDLESS OF FREQUENCY, can
be dangerous. The difference is that keyclowns don't care one way or
another, just as long as they keep those "bird watts" up!

Ok, they probably DO understand that fact, but they choose to ignore
it and freely defend its abuse.

But it's obvious that you are just along for the ride, so I'll spare
you the technical details (not that you could understand them anyway).

And how is an antenna at 60 feet, even with a 1/4 wave, going
to supply the EMF levels seen at the top of a broadcast tower
with 1 million watts of ERP?

You asked this a long time ago and you were quoted WebDoc's own
personal experience. You just ignored it, just like you ignored it
when you called me on that newspaper article about CBers getting sued
for causing a nuisance. I produced the article, didn't I, twist? You
still can't admit that one. In fact, you have NEVER admitted you were
wrong about anything even when the facts were undisputable, you just
ignored the issue entirely. That's your MO, twist, and we are all
familiar with it: If you can't spin it, you ignore it. And in fact the
very question for which you now beg an answer is a product of -your-
spin, not -my- claims. Do I need to show you your own posts? Didn't we
go through enough of that before? Didn't you get proved wrong enough
times? I guess not, or you wouldn't have been begging for my attention
for the past three months.

Why don't you do a real comparison: A 10kW CB amp compared to a 10kW AM BC tower. Power level is the same, and if both are 1/4w verticals, so is the radiation pattern. So is the AM BC tower emitting more interference than a keyclown at a keydown? Don't forget to factor antenna height, harmonics, ERP, frequency, line-of-sight, etc. Also consider that high-power RF is EXPECTED to be on specific bands, and can therefore be compensated for by the engineer. So are you now prepared to definitively say that one can bring down a helocoptor while the other can't? I don't think so.

Thank you, but that's not going to stop them from whining. They will think of some way to spin your references, or otherwise belittle the importance of the information you provided. That's why I intentionally omitted any specific reference to CB radio.

Regardless, these are great references!

This post was found on the rec.radio.amateur.antenna NG What does this have to do with antennas

-- Hello & Good Evening,
For the past 2 plus months the following individual
has been plaguing Rec.Radio.Cb and numerous other
groups with harassing troll like posts. He has used all these
alias below just to circumvent newsreader filters, so even
if you kill file him, he will do this to make the posts appear
on your newsreader. He has done just that at least 4 times
tonight alone.
Please do as I have if you have a problem with this:
Report to Abuse@Home.com , abuse@comcast.com
express your displeasure with what he has been doing to circumvent
newsreader filters.

I do,
When in Texas visiting my cousin we were
out in Galveston bay and started running through
the channels. He had a nav system that would give
him exact directions to Hawaii if he wanted too.
ACCURATE! man it pointed out a small sand bar
with in 5 feet of where we were.

My "paste job" came directly from the site I copied it from, and you
didn't read either. It said, "...routine radio waves from microwave
towers, radio antennas, and radars...".

But you are STILL avoiding the issue. I'll repeat it once more:

>>Let's get down to brass tacks,sparky. Where does your paste job mention 11
>>meters?
>
>Where does it mention any service in particular? If you had actually
>read some of those references, you would have seen that RFI can come

BTW, did you see WebDoc's post? Kinda puts the kybosh on your whole
evening you planned to spend trolling, doesn't it?

>ps..it screwed up my auto-pilots' flux gate compass too. Not that I'd
>expect you to know what that is.

You might be suprised. Did you know that I have worked with Hall
effect devices and designed a couple GPS systems? I even know how to
use a sextant and charts if the batteries wear out. Can you say,
"azimuth"? I doubt it. Now address the real issue or go away.

74. FA: Uniden Grant LT (Extra Channels)

Newsgroup: rec.radio.cb
Date: 2002-02-01 05:50:59 UTC
From: vhfradiobuff@aol.comspamsux
Message-ID: <20020201005059.06692.00000128@mb-fn.aol.com>
Source record: 114435

http://page.auctions.shopping.yahoo.com/auction/60861651

This auction is for a Uniden Grant LT 40 channel CB. This radio comes with many desirable features, such as AM and SSB modes, built in SWR/Power meter, knobs lit up in the dark and Dynamic Squelch Control to help reduce noise. It is in excellent working shape and is physically a 9.99 on a scale of 1-10, only because it isn't NIB. I just had the extra channels added (40 channels below channel 1 and 40 channels above channel 40). Included is a mounting bracket (not the original, but it fits perfectly), printout of manual, power cord and original microphone. I am getting rid of it to get money for another radio that I want to buy. I have used it very little because it was at the CB shop being modified. The clairifier has not been opened up.

75. FA: Cobra 142, D-104 mike (extra channels)

Newsgroup: rec.radio.cb
Date: 2002-02-01 05:52:03 UTC
From: vhfradiobuff@aol.comspamsux
Message-ID: <20020201005203.06692.00000129@mb-fn.aol.com>
Source record: 114436

http://page.auctions.shopping.yahoo.com/auction/60862086

This radio shows some age, but works excellent. It was recently put through alignment procedures at my local CB shop, which has been in business for 15+ years. The audio limiter was replaced, as the previous owner cut it. It now puts out approximately 12 watts AM and 20 watts SSB. Also included are "extra channels", extending the range above and below the normal CB band. The clairifier has been opened to allow you to slide about 5 kc's in either direction, giving you more coverage. The radio features a built in SWR/Power meter. The SWR CAL dial has been modified to act as a "dial-a-watt", allowing you to adjust the output power from almost 0 to the maximum stated above, great if you want to drive an amp. I have been using this radio for many months, but I am selling it to get money for another, more expensive radio.

Sparky provided lots of proof via links and quotes. WebDoc
substantiated these with MORE links and quotes. Both say the same
thing: illegal CB can and DOES interfere with emergency comms.

- VERSUS-

-Train's response: profanity and denial.

-Twistedhed's response: personal attack & derision.

-Mopar's response: changing the subject

-Landshark's response: personal attack & derision

-Etc.

But the current is at its lowest, and the voltage is at its highest, at the
end of an antenna. Not the feed end, the other end...

End or top loaded antennas are more efficient than center or base-loaded
antennas, in general. There are specific exceptions.

>
>>Magnet- mount is by far the worst of all the loaded antennas.
>>

Hello,

I would like to ask if anyone out there has a diagram detailing the pinouts
of the cable required to program the tait 3000 series handheld radios.

Thanks
Sam

Suggestions for an antenna setup for CB? Sure.. An easy one..

Take two Wilson Silver Load antennas, and build yourself a "dipole" out of them.. mount them on some 3/4" threaded rod to the last stake hole in the bed of your pickup. Bend the 3/4" threaded rod so the antennas clear the back end of the pickup. Use a balun made from a length of RG-58 or RG-8 mini. The length escapes my memory at present, but there's plenty of reference material out there on winding baluns.
If you don't have a pickup, you could rig a mount/bracket from the frame of the car off the back end...

I used a similar setup on my truck when I was driving, and on the car at home, with much success. My 2 watt AM/12 watt SSB signal did just fine against the Galaxy's and RCI's out there..

You'll have two end (top) loaded whips identical to each other. No ground plane necessary, and it's a hell of alot more efficient than many of the antenna setups in use out there.

Just my two cents..

Hello i have the following items for sale:
(1) New Galaxy Saturn Turbo Base Station (Same as Rci 2990)$450.00
(1) New Galaxy Saturn Base Station (35 watt version)$325.00
(1) Astron 50 amp power supply with dual meters (Rack Mount)$200.00
(1) Uniden President Hr 2510 (Like new condition)$185.00
(1) Cobra 148 GTL (In the box)$125.00
(1) Pyramid 25-35 Amp Power Supply (2 months old)$100.00
(1) Palomar 23Ch Base Tube Station With Siltronix Vfo (Unit is chrome)
(1) New Uniden Bearcat Bc780xlt With A New Base Antenna $400.00 This Unit Also Comes With The New 2002 Police Call Book And Cd Rom!

If there is anything of interest to anyone here email me direct as for i dont visit the boards much.

Nice approach! Not entirely sure what sort of balun you used but it
sounds like you just fed the bottom antenna off the shield and wound a
choke to keep the common mode currents down to a gentle, ladylike belch.

This is a variation of the groundless antennas used on fiberglass
firetrucks and such at VHF that have performed gangbusterly for years.
Pickups are not the greatest groundplane in the history of radio and your
approach makes a lot of sense.

Good advice.

I think all this about which antenna is 'better' is more
'hog-wash' than actual fact. Of the four kinds of loaded
antennas, helically wound, base loaded, center loaded and
top loaded, about the only place you'll ever 'see' the
difference in efficiency is on an antenna range. In everyday
use, I seriously doubt if you could tell the difference by
'ear' or "S" meter. Any antenna that uses a loading coil
will lose some efficiency because of the resistive losses of
the coil. The smaller the diameter of the coil (all else being
equal) the larger the loss in efficiency. The least efficient
of any loaded antenna is the helicaly wound one, since it has
the 'smallest' diameter and longest coil, and therefore the
largest resistive loss. The antenna with the highest efficiency
is the one that has not been 'shortened', and doesn't use a
loading coil.

Oh and Mopar, how many of these freebanders, the guys running the amps run a scope or other test equipment to make sure their rigs are aligned, and that there are no spurious emissions? and compare that with the hams to are for the vast majority running under 100w and for the most part do have test equipment in their shacks, and by test equipment, "bird meters" do not count in this discussion.

Ah, but you fail to address all the "magic" 10k+ antennas you see mounted on Suburbans! We all know they work better than they theoretically can, simply because those that have bought them say that they can.

From: Sparky@cet.com (Sparky)
Wrong again, twist, that was your spin on my words. I never said CB interferes with anything, I said that -illegal operation- causes interference. Freeloaders use freqs allocated to other services, and amps cause interference all over the place, -including- emergency services. No matter how hard you try to spin it, those are the facts.
-
No, these are the facts, with no spin:

From: Sparky@cet.com (Sparky)
Subject: Re: Legal???
Newsgroups: rec.radio.cb
Date: 2002-01-25 15:35:23 PST And let's not forget WebDoc's incident with the helicoptor...
-
It has been established by another that you have difficulty admitting when you may be wrong. It has been established by myself that you profess plenty of bullshit concerning cb problems. It has been established by several techs that you have a problem applying textbook theory to real life scenarios and applications concerning radio amplifiers. It has been established by yourself that you lie.

Hi Keith,
I expected maybe an update on the situation in your area...what's happening with that? Now you need to go back and reread my post where I indeed claimed "I'm not saying it NEVER happened",..what I said was that cb doesn't interfere with emergency comms. Hell, one could say 'Muskets are the choice of weapons for defense" and go all the way back to the olden days when that statement was true, quote someone that stated it at the time, and present it as fact, but it doesn't apply today. Citing incidents from many years ago doesn't substantiate a thing.
Technology surpassed what was taking place in your old "examples", such as plasma machines, medicinal devices, etc., etc.
Now you are going to use news clips from another country? What does that have do with us? We were told it happens right here, by you and some others. Are you saying US ops are responsible for interference in Ireland back in '93? This "foreign" thing you are now reaching for swings both ways...cb isn't the same over there, especially in Ireland (did you bother to check?) and has no relation to the claims made here accusing our cb's of interfering with emergency comms, just as the FCC has nothing to with the foreign operators. The claim was repeatedly made that freebanding cbers AND cbers with amps did it.....I'd still like to know if the interference you claim is taking place near you is on a trunked system, VHF, sheriff, local, or what?

I presume you mean him Train, not me <G>
Also I don't understand his response at all, could
someone explain what the hell he was trying to say.

Yeah he has a 27' center counsel Sea Ray and
we were visiting so I was driving it and was amazed
on how accurate it was, pretty cool stuff. That was
3 years ago so I'm sure that the technology is way
advanced now.

well James you have been introduced to
our resident troll. In case you missed my other post
concerning him:
Hello & Good Evening,
For the past 2 plus months the following individual
has been plaguing Rec.Radio.Cb and numerous other
groups with harassing troll like posts. He has used all these
alias below just to circumvent newsreader filters, so even
if you kill file him, he will do this to make the posts appear
on your newsreader. He has done just that at least 4 times
tonight alone.
Please do as I have if you have a problem with this:
Report to Abuse@Home.com , abuse@comcast.com
express your displeasure with what he has been doing to circumvent
newsreader filters.

You know that train claims to be rich and drives an expensive sports
car. I'm sure he could afford to pay you to be his cheerleader. It would
sure supplement your savings from mowing lawns last summer.
--
It's funny how you keep trying that same dig(mowing lawns)on me. I do
everything there is to do with lawns,from growing them to killing them.
I'm damn proud of what I do,it provides,and I've been doing it since
1978. My wife works at home too.(office)
I don't spend anymore time behind the mower,but if I had to I would.
Train doesn't need a cheerleader.

~Moparholic~
-
You ought to think about retiring to the 'pile, Mopar. I got a good
friend that has a business similar to yours. Work is year round and you
get paid in the winter the same as you do the rest of the year but you
only mow about once per month (in the winter). Summertime you have to
mow at LEAST once a week, and during the rainy season sometimes that
isn't even enough. Landscaping, trimming palms, planting, and now
xeriscaping (not sure of the spelling...it's planting with all native or
vegetation that needs none or very little water) has become the latest
rage due to the water management problems. I'm just getting ready to sow
some Winter Rye...I've had it with this damn St. Augustine bullshit that
everyone sells..I believe you northerners call it crab grass.

On Thu, 31 Jan 2002 10:47:04 -0500 (EST), twistedhed@webtv.net
(Twistedhed) wrote:
-How about quoting just one that lends credibilty to anything you said
concerning cb interference to helicopters or emergency comms? You can't.
-
You asked this a long time ago and you were quoted WebDoc's own personal
experience.

-
A personal tale doesn;t cut it with me and does not substantiate a
thing.. I'm cynical by nature, especially what is said on the net.
-
You just ignored it, just like you ignored it when you called me on that
newspaper article about CBers getting sued for causing a nuisance. I
produced the article, didn't I, twist?
You still can't admit that one. In fact, you have NEVER admitted you
were wrong about anything even when the facts were undisputable, you
just ignored the issue entirely.
-
Not true, Spark. Matter of fact, you claimed a LOCAL incident, I called
you on it, then you produced something on the other side of the
state...once you claimed you were near Seattle, another time Spokane.
Lying is your forte so how can anyone believe anything you say,
especially since you're barely treading water right now. The issue isn't
an old one concerning me, it is your claims that cb and freebanders
interfere with emergency ops. I asked you to produce and now you do what
you girls always do, attack the one who posed the question. Not
effective, Sparky.
-
That's your MO, twist, and we are all familiar with it: If you can't
spin it, you ignore it. And in fact the very question for which you now
beg an answer is a product of -your- spin, not -my- claims. Do I need to
show you your own posts? -
Might as well attack me since you can't produce..it's all you know. You
were shown to have lied once again and you're not going to produce a
credible source backing your claims that cb interferes with emergency
ops. Anything to shift the matter from your disbility to communicate
effectively.

You might be suprised. Did you know that I have worked with Hall effect devices and designed a couple GPS systems? I even know how to use a sextant and charts if the batteries wear out.
-
Figured a stargazer (not that there's anything wrong with that) like you wouldn't even need a chart. You want to learn some real navigation, c'mon down and impress the local Indian fishing guides and trackers with your charts.

Read it again, Shark. Bogus claims were made concerning RECENT interference to emergency ops. Now I know these claims are bogus, but what I say means about as much as the next guy and I am about concerned as much, doesn't really matter. I asked for some substantiation to these fantastic claims and not one person came forward with anything pertinent. It was muddled by those who know it can not be proved, and now, by one whooriginally claimed it. I'm sure webdoc is a very nice guy, react, community service, etc., etc.,..whether or not I believe him is immaterial. Problem is, evidenced by Sparky and a few others, is people take stuff too personal. You point out Sparky is wrong and he attacks the person, not the issue, abdicating all credibilty.

It was pointed out that the claims have not been proved by old news and links to foreign media sites. May I remind you that webdoc's claims, as yours, are still unfounded.

Oh yea, the references are pertinent to interference, no doubt about it...and it is no accident that general interference is now the topic. I haven't seen one post yet claiming interference doesn't occur. Anyway, have a good weekend thataway!

Hello R Packer II: The Cobra 1000 I am sure can be purchased from
Dynascan, look the net over for Cobra.

The book on Linear Amplifiers, there's a few of them and well worth the
price. Look at the RF Parts web site at:

http://www.rfparts.com/

Click on Products then Books

RADIO FREQUENCY TRANSISTORS, Principles and Practical Applications
RF CIRCUIT DESIGN
MOTOROLA RF DEVICE DATA MANUAL
COMPLETE RF TECHNICIAN'S HANDBOOK

Here are more great books:

BASIC PRINCIPLES OF SEMICONDUCTORS
INTRODUCTION TO RADIO FREQUENCY DESIGN ï¿½ Wes Hayward
SOLID STATE DESIGN FOR THE RADIO AMATEUR
2002 ARRL Handbook

Yeah all the books are expensive, but how much does knowledge cost?

Call the dudes at RF Parts, they are very friendly and helpful, tell em
Jay sent ya, and they will water down your drinks and charge ya double!

Give me a e-mail iffins ya needs more help!

Jay in the Great Mojave Desert, ... just down the road ah ways from
the fillin station.

It is a VHF system the PD, SO, and FD/Rescue all run VHF in the 154Mz range. This is changing though, they are going to a digitally encrypted system, it sounds similar to listening to an SSB transmition when you are on AM. And since you want proof that it has happened here in recent times I will talk to my friend the Lt. who was the one that made the visit to me, and see if he would be interested in talking to you. I am not however going to continue arguing the matter, it happened I was there, and your belief in the situation bothers me the least. Unlike some here, I can be found my email is right there, and anyone can look up my REACT teams address on the REACT Intl. web page, or can look up my Red Cross chapters web page, email, and phone # on www.redcross.org.

It is a VHF system the PD, SO, and FD/Rescue all run VHF in the 154Mz range. This is changing though, they are going to a digitally encrypted system, it sounds similar to listening to an SSB transmition when you are on AM.
And since you want proof that it has happened here in recent times I will talk to my friend the Lt. who was the one that made the visit to me, and see if he would be interested in talking to you. I am not however going to continue arguing the matter, it happened I was there, and your belief in the situation bothers me the least.
-
And that's probably why we can debate something without resorting to insults...neither of us give a damn what the other believes.
I didn't realizing we were arguing, Keith, I was under the impression it was a discussion, but since I now see how you view the situation, I can understand you distancing yourself from the matter.
--
Unlike some here, I can be found my email is right there, and anyone can look up my REACT teams address on the REACT Intl. web page, or can look up my Red Cross chapters web page, email, and phone # on www.redcross.org.
Keith Hosman
-
Yup, you put your name right out there, as it has plenty to do with your activities in relating to cb with your personal life, react, etc., and that is your choice. Would you like it if the choice was made for you, as has been the attempted pattern by some in here? Unfortunately, the fact that most of our lives don't revolve around cb isn't a good enough reason for a few...UNLIKE SOME, I don't give a damn about personal info on people I don't agree with.
I would indeed lend creedence to one who sets forth their name in MOST circumstances, however this is a usenet forum under constant harassment from certain self-defeated hammies and claiming that lack of a legal name, addy and phone number somehow makes a post impervious to being a lie is just more information for the "internet myths and hoaxes debunked" link.
But why bother your friend? Why not just tell the name of the pd where the cb interfered with their comms..I can contact them myself and speak to their PR or communications department. If they tell me no comment, oh well, there may be something to it. My problem is with buying into the fact that an alleged cb interference case is being kept to a clandestine internal investigation by a law enforcement agency, who must follow federal protocol.

Don't take it personal, Keith. If something is posted on usenet, one should at least be able to address questions about it without fear of attacks, retaliation, or pissing off the person who made the original claim. I don't want an argument, just a credible source where I can confirm it and then tell everyone how wrong I was and how right you were.

> local police can take care of it.

Especially true of the drunken slobs on '435 (many of whom I remember
hearing from the CB wars of the late '70s to mid-'80s)... since many
of them became Generals or higher, they know how to stand a better
chance of getting away with their stunts (jamming, drunk on the air,
playing music, tag-team reset, body noises).

> btw, the guys causing the hate and discontent in so Cal on 2 meters are
> probably Terminal techs "take that as CBers who haven't or cannot pass the
> code" I wouldn't doubt there are many non hams jamming the repeaters.

Surprisingly, many of the worst offenders are Extras, Advanced, and
Generals---I know, because I heard them on 3.895 and 14.313 before
they started getting busted. The non-hams are very easy for them to
pick out and ignore (no IDs, rudeness, etc.), effectively kicking them
off the freqs.

> There are many illegally modded radios floating around the Cb chatrooms and this NG.

I believe it... I just happen to have one of the last 148GTL's made
before they lowered them to 4W, but I'd never mod it because it's a
collector's item now. Never seen a "Galaxy", but heard a lot about
them... I gather it's a type of vintage '70s CB rig that was favored
for modding?

LOL---to hear Aaron talk, the G-men are at this very moment hot on the
trail of the boys down the street who have been cutting into cordless
phone conversations with their GI Joe walkie-talkies! Personally, I
think it's pretty damn funny myself (even though the little brats
nailed me a few times already, thank Christ nobody makes a rig that
will jam 800-1000 MHz). Aaron seems to forget that even the mighty
Riley Hollingsworth has been disciplined by other officials for
stepping over the thin blue line.
Moral #1: some individuals (to wit, me) do not take very well at ALL
to intimidation. Doesn't matter to me if it's Jehovah God dishing it
out.
Moral #2: worst mistake a law-Tory can make is to take the law
personally---he's setting himself up to chase away all his friends if
he does.

K.E.

The Code requirement is not the only problem with the above idea. I
mentioned it before, there is that pesky 3rd party traffic ITU regulation to
content with too.

>debunked" link.

LOL! Am I one of those "hammies", twist? If I am, then what's my
callsign?

> But why bother your friend? Why not just tell the name of the pd where
>the cb interfered with their comms..I can contact them myself and speak
>to their PR or communications department. If they tell me no comment,
>oh well, there may be something to it. My problem is with buying into
>the fact that an alleged cb interference case is being kept to a
>clandestine internal investigation by a law enforcement agency, who must
>follow federal protocol.

You are a journalist, twist. Do the work yourself. You know Keith's
location, why do you need someone to give you a phone number? Can't
you look it up yourself?

> Don't take it personal, Keith. If something is posted on usenet, one
>should at least be able to address questions about it without fear of
>attacks, retaliation, or pissing off the person who made the original
>claim. I don't want an argument, just a credible source where I can
>confirm it and then tell everyone how wrong I was and how right you

>were.

HA! You don't want a credible source because you will have to change your requirements for proof, just like you did with this topic and just about every other topic that you didn't ignore!

Don't give him anything else, Keith, he is just going to turn it on you and try to make you look like an idiot! He want's credibility because he doesn't have any! Don't feed the troll!

I just installed a CB in my motorhome the antenna was installed at the
motorhome factory.
I want to see if the antenna is properly tuned or set.
I think you have to use some kind of gauge or meter to do this. This
where I need help.
Thanks,
Tony (the neophyte)

Hi Twist,
I know claims were made, I agree with you that they are not for real. My point and I believe Keith's was that the"Did not, Did too" was going on way to long. His posts I'll agree are old and some what out dated, but still are references to what was being discussed.
Take
Care,
Landshark

-
Oh yea, the references are pertinent to interference, no doubt about it...and it is no accident that general interference is now the topic. I haven't seen one post yet claiming interference doesn't occur. Anyway, have a good weekend thataway!

One thing I will add to this at this point, while some of these posts were from out of country, the radiuos mentioned were in the 27mz range i.e. 11m, and those that were from a few years ago, you must remember that not all areas have the latest technology, hell I know some areas where the pd is whatever they can get off the shelf. The older systems do not have the filtering in place the newer trunked systems have, same with the digital systems coming into play now.

I have some excellent equipment here for team use, Kenwood commercial gear and we even get bleed from 11m on them sometimes.

Anyway thats all I have to say for this, twist, check yer email re: my friend at the PD. I'll be in Toledo all weekend for classes with the ARC not sure if I will have time to get online.

73's Keith

I don't run my life as a popularity contest, I am not recruiting, I am here purely for recreation and when it is not fun, I won't do it anymore.

I also never read Morse in written form so if there is a message, you are going to have to clue me. Or quit cluing me and give me a hint.

That I might be a factor in a decision to study code or not study code is simply ludicrous, right up there with Aaron thinking he is having any effect at all. One does it because he wants to or at least likes the results of doing the Nintendo exercise; it is only those who haven't got the ability to set a plan and execute it that look for excuses. If I provide that excuse, tough.

Love me, hate me, ignore me. Macht's nichts bei mir. What you see is what you get.

Oh my. are you still in the 1900's. Damn it is now 2002. What does the war have to do with it. You seem like a teeny weeny OLD man that is a pervert, that is racist & cannot leave the past alone. You seem to be blaming everyone for the war and your mistakes. Get over it. It is 2002 now. You probably think that the world was going to end in 2000. There may still be racism now. Like you. But most accept other races and other mistakes. Oh well. You can live in the past and look at your girly porn. Ut, or is it boy porn. But you are too funny to listen to and I love laughing at trolls that want to argue. Atleast I am not getting bent out of shape over your whining.

You'd be hard pressed to find anyone here that would think you worth the few cents the bullet would cost!
Just another example of your over-inflated ego and dillusionary self worth shining through.

Hello Train: Yeah that hit the nail on the head I'd say right!!!!

It sure sounds like ol Frank is taking all this a little to seriously.

What I don't understand is that at times Frank makes great technical postings, on Linear Amplifiers and such, then goes over board into left field, and takes himself too seriously, on wrong technical issues.

I suggest a rest or vacation, you know with some long legged honey, way too many Marguerites, and cold cold beer. While getting lost for a few weeks.

Maybe James could take Frank with him?!?!?!?!?

Message-ID: <YUI68.22021$gd.4894167@news2.nash1.tn.home.com>
Source record: 114315

Hello,
I am interested in the Cobra 75 WX ST. I don't need a high power CB as I will only need it while off roading with friends.
I have tried to find reviews or opinions on it, but haven't had much success. I'm hoping this NG can change that.

Where is a good place to purchase one off the web and what antenna is best for a limited use radio?

Thanks in advance!

Cuz BigRadios.Biz sales are at stake. If illegal CBers start seeing
proof that their overpowered outband rigs interfere with stuff then it
could affect Train's ability to sell his cb amps and crappy doctored
radios.

If you are going off roading CB is not the answer, when the skip is in , like everyday latley, you would be lucky to talk 1 mile & their might be 1,000 people on the same channel talking at the same time, might try FRS radioes, but their range is short. Send smoke siginals, work much better, no linear amp &,no antenna needed, and no batteries to run down.

Maybe your perspective is a bit off, since I have eight emails from people that took -me- too seriously. There hasn't been any more.

But you wanna know what I take seriously? The Idaho legislature just overturned term limits imposed by the voters in 1994. When the government can overturn laws created by the legally and formally demonstrated will of the people, in direct opposition to the intent of the US Constitution, then it's time to change priorities. So I'm putting the CB issue on hiatus while I start frying bigger fish. Not a vacation, just a change in plans.

So I guess that means Toll, Brian & Eitner will come back to try and regain their self-proclaimed and unearned status as amp gurus. Heck, maybe they have actually read a book by now, but I doubt it. At least it's better knowing that their ignorance is in the archives for everyone to see.

But the real issue is the nature of some of these illegal operators, with train and twistie topping the list. I guess I'll never understand why some people take so much pride in such selfish and antisocial behavior. Maybe that's the draw of CB radio. If that is so, the rest of us should consider ourselves lucky that they have something to keep themselves occupied...for the time being. After they get tired of CB, who knows, maybe they will go into politics...

LOL at smoke signals.

If your off roading is anything like ours you usually stay pretty close. Trying to keep up with an FRS while doing this would be like trying to drink a beer while on a bulls back in a rodeo. Let alone try to hear it over the engine, splashing, and mud slinging. I would recommend a CB that has a RF Gain on it. By backing off on it some you will be able to tune out allot of the "skip". As far as the antenna, go for something very flexible. I would stay clear of the "Firestick" type of ant. Personally I have an 96" Francis. Though I have spit the tip on it once (in a multilevel garage) I have no problems. I went to the hardware and got some epoxy and fixed it. Then dip and cured the tip a couple of time to build up a thick coat to about 6' down from the tip. I do steer clear of trees when possible. Maybe a bottom load with a wire stinger. How heavy is the brush you will be in?

This is just my opinion therefore it could be wrong in some ppls eyes.

Take a second thought re term limits because they can have some
interesting effects.
We have in NE the only one-house legislature in the US, the legacy of GW
Norris. The good conservatives imposed both session limits and term
limits. The effect of the former was to hand the legislature to a black
radical senator from Omaha without whose blessing nothing happens (aside
from that a very competant legislator) and the effect of term limits to
hand the initiative to the mandarin civil servants by depriving the
legislature of institutional memory. The law of Unintended Consequences
can strike with a vengeance.

We have a simpler solution: no one who has ever served in the Unicameral
has ever won an election to anything else since 1937.

Hello Burg Path: Yes Jeeping around is a lot of fun.

Use to go all the time with my 1966 Bronco. I had a 102 inch stainless steel whip antenna mounted on top of the Cap, and got out all over with a barefoot Johnson transistor 5 channel radio.

If your going to use what is called a quarter wave antenna, like the 102 inch stainless steel whip antenna mounted on a Ball and Spring Mount, then there isn't much to tune, these type antennas tune in just fine. Trimming the coax length does not tune the antenna.

There are other shorter antennas like a Wilson 1000, that has a small coil at its base, that can be magnetic mounted, or mounted to the body, or even a "L" bracket, mounted to rear light fixture, or what ever else you have hanging on the Jeep. The Wilson 1000 is about 62 inches long.

The best place to mount the whip is on top of the Cap in the center, but for short range stuff like your going to do, I would mount where its easiest.

Most CB Antennas should be rather easy to tune for min SWR. SWR stands for Standing Wave Ratio. Its the measurement of (compared) power going out the transmitter as compared to the power coming back from the antenna, due to a mismatch in the antenna. There are allowances of small levels of power coming back from the antenna.

Radio Shack sells a inexpensive SWR meter, but you will also need a jumper coax cable, that has PL-259 connectors soldered onto the jumper. The instructions for the meter will tell you how to use it. A local CB Shop can sell you the antenna, and you can ask to have them to check the antennas SWR, as dangling a carrot.

Good luck.

Thanks for the replies. Smoke signals are tough due to forward drift while driving. If I could keep the fire stationary all would be OK.

No one has a negative about the CB type? As for an antenna I cant really say I need a large whip. This will be a short range transmissions. Would one of those magnetic mount types work?

You might be suprised. Did you know that I have worked with Hall effect
devices and designed a couple GPS systems? I even know how to use a
sextant and charts if the batteries wear out.
-
Figured a stargazer (not that there's anything wrong with that) like you
wouldn't even need a chart. You want to learn some real navigation,
c'mon down and impress the local Indian fishing guides and trackers with
your charts.
-
ROTFLMMFAO!!! You, like Timmy, still think I'm N7VCF!!! HAHAHAHAHA!!!! I
had my suspicions with your previous post, but... Hey twist, didn't you
learn your lesson with the phone harrassment incident? JHFC, how much
dumber can you get? You claim to be cynical of anything on the net but
you take your own unsubstantiated delusions as fact? I would killfile
you if you weren't so funny!
-
No, you wouldn't killfile me. You tried remember, right after your ISP
was canceled, but you calmed down a bit since then.
Now, on to enjoying more of that excrement that flows freely from your
mouth...., feel free to contact N7 at ANYTIME and ask him if I was
involved in harassing him in any way whatsoever. I have exchanged email
with him on several occasions,,,,unlike you, he is human and quite aware
of the harassment and juvenile ways you perpetuate here..
Once again, come on down here and impress the natives with your charts
and navigational abilities. ROFLMAO!

Yes the radio will work fine for your
situation. I would go with the S.S, 102" whip,
it cost only around $12.00 and when it hits
low hanging limbs it just bounces off with little
or no damage. Magnet mounts will work fine,
only when you might hit the low limb or bounce
pretty hard on a hole it might pop off.

Maybe your perspective is a bit off, since I have eight emails from
people that took -me- too seriously. There hasn't been any more.
-
The only thing off is your comprehension ability. You delight in posting
private emails meant for you (remember when you posted the one I sent
you asking what your problem was in the group? Then, true to form, you
sent an email to another and they posted it here and you gave them hell
for it, said it was low, etc., until I reminded you that you did the
same thing? That shut you up for a while.) so if you received a threat,
you would have posted it long ago. At the very least, some would lose
their ISP. You nad Lelnad are quite familiar with the process. So dazzle
us with your light, Spark,,who would bother to threaten one who is
already beat? Yer talkin' thrugh your bottom..again.

From: Sparky@cet.com
So? That's your proof? Proof of what? LOL! It's proof that YOU can't accept the truth about anything! Come up with something substantial next time, twist, your posts are not even worth reading anymore.
-
Are you saying you don't believe Keith's claim? So you were citing his example because you don't believe it? It's proof positive that you put forth the opinion that cb interferes with emergency ops,..LOL...remember? Are you saying you don't believe webdoc's claim about cb interefering with the whirly bird, either? Then why did you mention it? Heheh!
There is plenty more where that came from, go find it. There are many ridiculous posts by you with wrong conclusions,, outright lies, and the rest is just uncompromised ignorance. As far as reading my post, you have displayed deficiencies with comprehension of all that show you wrong. If you weren't concerned with my approval, you wouldn't seek it so often.

Yup, but you know it will work fine and
practically be indestructible. It bends when going
under low objects and springs right back when clear
of those objects. A magnet mount will perform fine,
but night get knocked on low objects or big bumps.
What type of wheeler is it? do you have
a tire rack in back that you can mount the antenna?

I have a 98 Pathfinder. There's no where to mount an antenna on the rear. I had hoped to find a mount that would attach to my luggage rack and then be easy to remove. (I have a short garage)
A whip that long would get damaged in my garage.

Well you have a tricky situation, but not
hopeless. You can put a bumper mount with
either a chain style that goes around the bumper
or mount a ball on the bumper. Don' worry
about the whip, it won't get damaged pulling into
the garage. I used to have a Toyota 4x4 with the
antenna in the center hole of the roll bar. I pulled
in the garage every night, all I did was grab the
end of the antenna and bring it around to the front
of the truck for pulling out in the morning.
You can always get a quick disconnect to for
the mount if you so desire.

Gotta go now, going for a ride while
the weathers nice.

You can take a look at www.bills2way.com
and see what he has. Or e mail him and ask what
he would recommend to use.

184. Siltronix 90-7 trouble

Newsgroup: rec.radio.cb
Date: 2002-02-02 18:25:18 UTC
From: George Folse <kb5wwo@bellsouth.net>
Message-ID: <3C5C2F0E.1582A824@bellsouth.net>
Source record: 114346

I am using a 90-7 vfo on my Cobra 135. The problem I am having it will not go above channel 40 no matter where I tune it to. Was there some kind of channel block installed in these vfos?
George

Amateur Radio Newsline™ Report 1277 – February 1, 2002

Amateur Radio Newsline report number 1277 with a release date of Friday, February 1st, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The President of the United States speaks to hams in Florida and is ham radio seeing a second Solar Max? These stoies are first on amateur Radio Newsline report number 1277 coming your way right now.

(Billboard Cart Here)

**

BREAKING NEWS: PRESIDENT BUSH COMES TO HAM RADIO

The President of the United States has come to ham radio. Bill Burnett, KT4SB, has the details:

--

President George W. Bush has taken to the ham radio airwaves. This, to thank the Florida Amateur Radio community for being ready to serve the public when it is needed.

The President’s comments were made during a stopover the morning of January 31st at the Volusia County Fire Services and Training Center near Daytona. Around 9:15 AM Eastern Time, President Bush checked in to the Northern Florida Amateur Radio Emergency Service Net on 3.950 MHz using a portable station set up John Schmidt, AF4PU. Then the President made these remarks to the 40 or so stations listening to the net:

--

President George W. Bush:

"I want to thank all the volunteers who help make sure that Florida is prepared for any kind of emergency. I also want to assure you that your Federal government is doing everything we can to make sure that there is not an emergency--starting with unleashing the mighty U.S. military overseas to bring evil ones to justice. But should there be a need for a response, I want to thank you all for helping our communities be prepared. And finally, I want to tell you--we are lucky to be Americans and may God continue to bless this great land of ours. Thank you very much."

--

Needless to say the net members were delighted to have the President of the United States address them. More important, hams nationwide can now be sure that President Bush knows that Amateur Radio operators are ready to serve whenever he, and the nation, needs to call on them for help.

In Miami, I’m Bill Burnett, KT4SB, reporting for the Amateur Radio Newsline.

--

The complete story is on the web at
http://firstcoastcommunity.jacksonville.com/northfloridaamateurradiosocietynofars (Tnx NU4F, CQ Magazine)

HAM RADIO SCIENCE: TWO SOLAR MAXIMUMS THIS SEASON

In case you are wondering why the current solar cycle is still providing such amazing VHF and UHF DX, one researcher may have the answer. He says that the current cycle appears to be having a second peak and that this is really not very unusual. Henry Feinberg, K2SSQ, looks at the scientist and his latest data.

--

The most recent and ongoing Solar Maximum -- or Solar Max -- theoretically crested in mid-2000. Sunspot counts were higher than they had been in 10 years, and solar activity was intense. One remarkable eruption on July 14, 2000 caused brilliant auroras as far south as Texas. But after that, sunspot counts slowly declined and the Sun was relatively quiet for month-long stretches. Most scientists said that the Solar Max was over. But was it?

Now, as 2002 unfolds, the National Aeronautics and Space Administrations solar foorecasters say that it looks as if the Solar Max is back with us again. The Sun is again peppered with spots, eruptions are frequent and hams notice that the VHF DX keeps rolling in.

Why is this happening? Well David Hathaway, a solar physicist at the NASA Marshall Space Flight Center in Huntsville Alabama has one theory. Hathaway says that the current solar cycle appears to be double-peaked, and the second peak has arrived.

--
Hathaway Audio Here
In-Q: We have seen other cycles...
Out-Q: ...define this maximum
--

Scientists track solar cycles by counting sunspots and Hathaway is an expert forecaster of sunspot numbers. He says that sunspot counts peaked in 2000 some months earlier than we expected. He says that the subsequent dip toward solar minimum seemed premature and before long, sunspot counts reversed course and began to climb toward a second maximum that now appears to be only a few percent smaller than the first.

--
Hathaway Audio Here
In-Q: Its a bigger than average...
Out-Q: ...smaler than 19, 21 and 22.
--

Hathaway notes that there is a widespread misconception that solar activity varies every eleven years like a pure sinusoidal wave. It isn't. He says that solar activity is chaotic and there can be more than one peak in any given period. Translated for ham radio: Enjoy the VHF DX while you can.

For the Amateur Radio Newsline, Henry Feinberg, K2SSQ.

--

Hathaway says that the Solar Max eleven years ago was much the same as this one. The first peak arrived in mid-1989 followed by a smaller maximum in early 1991. And if you are interested in hearing more about this interesting phenomena from David Hathaway its as easy as taking your web browser over to www.rainreport.com. Or you can call on the phone to area code 847-827-7246. (NASA, RAIN)

**

HAM RADIO IN SPACE: HF ANTENNA INSTALLED ON ISS

High Frequency ham radio operations from the International Space Station could be on the not to distant horizon. This, after a successful space walk on January 25th to install another antenna on the orbiting outpost. Amateur Radio Newsline's Roy Neal, K-6-D-U-E, has the details.

--

The spacewalkers have had another good day in space. On Friday the 25th of January, Cosmonaut Yuri Onufrienko, RK3DUO and Astronaut Dan Bursch, KD5PNU, successfully mounted a second ham radio antenna near a docking port amidships on the International Space Station. It is made of flexible tape and is similar to but longer than another antenna installed on January 14th. That one tunes both VHF and UHF frequencies. The new antenna will tune HF frequencies.

ARISS Board Chairman Fran Bauer, KA3HDO, says it definitely will work on ten meters and may even be made to work on 15 and 20 meters. BUT right now there is no gear on board to handle those frequencies. Experiments using the lower frequencies are on the list of futures for ARISS but no timetable has been assigned to design and build them.

Owen Garriott, W5LFL, the first man to operate ham equipment in space, once prophesied that a five watt transmitter in orbit might well be heard simultaneously world wide. The great number of hams with good stations on the lower frequencies also makes them enticing to ARISS. It's a safe bet that serious consideration now is being given to expedite such a project. Once a station is sent up, the antenna will be waiting.

The new antenna is the second of four to be installed on board the space station. No timetable has been announced for the final installation. All of

these amateur antennas were built by Italy, tested and qualified in the US, to fit ports built by Russia, as befits the international nature of the ISS.

For the Amateur Radio Newsline, Roy Neal, K6DUE

--

Installation of the 2.5-meter long flexible tape antenna involved not only the mechanical deployment but routing cables and establishing the R-F connection as well. (ARISS)

**

HAM RADIO IN SPACE: THAT ANNOYING SATELLITE IS OFF 2 METERS

An annoying mystery satellite transmitting AFSK, frequency modulated Morse on 144.100 MHz for several days has been identified. It turned out to be a signal from the MAROC-TUBSAT satellite. This is an Earth-sensing spacecraft owned by a Moroccan government agency called he Royal Center for Remote Sensing. It was placed into a polar orbit by a Russian launcher on December 10, 2001.

As soon as he learned of the interference to amateur operations, Professor Udo Renner of the Center had the 144.100 MHz transmitter turned off. He then notified AMSAT Germany that TUBSAT was no longer on two meters.

But TUBSAT also has a downlink at 436.075 MHz. This system is only busy over North Africa and Europe and only when the control stations in Rabat and Berlin are activated. It has not been heard elsewhere in the world. (AMSAT-NA)

**

Break 1

SPECTRUM PRESERVATION: ARRL SAYS IT WILL FIGHT TO KEEP RFID OFF 70 CM

The ARRL says that it will go all the way to protect the 70 centimeter ham band from a threat brought by commercial interests. At issue is a plan from SAVI Technology and already tentatively agreed to by the FCC to deploy unlicensed transient R-F identification tag transmitters operating between 425 and 435 MHz. These tags run at much higher field strengths and duty cycles than Part 15 rules now permit.

According to a League bulletin issued on January 29th, ARRL officials have already met with members of the FCC staff as part of the League's effort to stave off a band threat. The bulletin says that General Counsel Chris Imlay, W3KD, and ARRL Technical Relations Manager Paul Rinaldo, W4RI, delivered an ex parte presentation to FCC Office of Engineering and Technology staffers January

14th outlining the opposition of the ham radio community. (ARRL)

**

FCC: CHAIRMAN POWELL HOME AFTER HOSPITAL TESTS

Federal Communications Commission Chairman Michael Powell was discharged from the hospital on Friday January 25th. This, after a two-night stay in the to undergo tests because of a lingering stomach bug.

Stomach discomfort caused him to cancel appearances at the Consumer Electronics Show in Las Vegas on January 8th and again at the annual conference of the National Association of Television Program Executives on Wednesday January 23rd. Doctors advised precautionary tests that required overnight stays at Walter Reed Army Medical Center in suburban Washington. (Published news reports)

**

ENFORCEMENT: THAT SONG WAS NOT AS BAD AS WE THOUGHT

The Federal Communications Commission has dropped an indecency fine against a Colorado radio station. KKMG FM of Colorado Springs had been fined seven-thousand dollars for airing the edited version of Eminem's "The Real Slim Shady." This, after a listener wrote the regulatory agency to complain.

At the time the fine was issued federal regulators said the edited version still included some expletives and references to violence and graphic sex. But the FCC now says it has reconsidered. It now says that the lyrics in the edited version didn't violate its rules by being "patently offensive." (FCC)

**

RESCUE RADIO: BRAZIL RADIO OPERATORS HELP IN POWER OUTAGE CRISIS

A major electricity blackout hit at least five Brazilian states on January 21st, and it was hobby radio enthusiasts that let people know about it.

The blackout, which began at 1:30 p.m., hit hardest in the industrial southeast and the major cities of Sao Paulo, Belo Horizonte, Rio De Janeiro, Goiania, Vitoria and the capital, Brasilia.

According to news reports, Brazil’s National Energy Agency blamed the outage on transmission line failures. The same news report credited Brazilian hobby radio operators as informing authorities that subways in Rio De Janero and Sao Paulo were halted and that traffic lights were out snarling commuters in several areas.

The outage was caused by a failure at the Itaipu hydroelectric station in southwestern Brazil. A power-line failure caused thirteen of the dam's eighteen turbines to stop, cutting off nearly 20 percent of the country's energy. Power was restored about three hours later. The news story did not identify the radio operators as being hams. (Various shortwave news reports)

**

RESCUE RADIO: NEW INTER-JURISDICTION RADIO SYSTEMS BEING INTRODUCED

Santa Clara County California, police, fire and emergency medical personnel have never been able to communicate with one another at the scene of a major disaster. This is because each agency uses a separate radio system. That is expected to change this year.

Santa Clara County will be leading the nation in using new digital radio technology to solve the inter-agency communications problem. The new system will allow up to eighteen participating jurisdictions in any county to talk to one another instantly.

By way of example, once the system is up and running, officers involved in one of California's famed high-speed car chase will be able to talk directly to police in the neighboring jurisdiction as the suspect approaches that town. They won't have to switch channels or go through dispatch centers. This means less time wasted and the probability that lives will be saved.

While Santa Clara county is at the head of the pack in adopting this new digital communications technology, the same news reports say that and Washington, D-C is not far behind. (Cal-State Info.)

**

PUBLIC RELATIONS: A CHEAP SATELLITE

A Cheap Satellite is the name of an Associated Press item that highlighted the work of the faculty and students at the United States Naval Academy in the development and launch of the P C Sat ham radio satellite. The story tells how the twenty-five pound bird was built using off the shelf products including a tape measure for its antenna and rechargeable double A cell batteries for power.

The story was written by Tom Stuckey and moved on the wire on Wednesday January 23rd. It noted that PCSat, was the 44th amateur satellite put in orbit. It is one of more than a dozen built by university students around the world. (VHF Reflector)

**

CONVENTIONS & HAMFESTS: ORLANDO HAMCATION WEAK SIGNAL FORUM

The Orlando HamCation will host its first ever Weak Signal VHF and UHF forum. Beginning at 2 p.m. on Saturday Ferbruary 9th, the one hour session will be moderated by N2CEI, of Down East Microwave. Also, Tom Haddon, K5VH, will be on hand to motivate more Florida hams to become active on the Microwave bands.

If you are in the Orlando Florida area on February 8th to the 10th drop in on the Orlando Hamcation. For more details and or advance reservations, go to oarc.org/hamcat.html on the World Wide Web (W2BZY)

**

CONVENTIONS & HAMFESTS: DATE CHANGE FOR RADIOFEST 2002

Brian Broggie, W6FVI, asks that we pass along a date change for RadioFest 2002 sponsored by the Naval Post Graduate School Amateur Radio Club in Monterey California. The new date is February 23rd. More information is in cyberspace at k6ly.org/radiofest. (W6FVI)

**

HAM RADIO SCHOLARSHIPS: THE DARA SCHOLARSHIPS

The Dayton Amateur Radio Association is one of three ham radio organizations seeking nominations for its scholarship program for the 2002-2003 academic year. According to DARA, applicants must be graduating high school seniors in 2002 and hold any class of an FCC issued mateur Radio license. The scholarship awards run up to $2000, as determined by the scholarship committee. Money must be used toward tuition at an institution of higher education.

To obtain an application, send a self-addressed, stamped envelope to the Dayton Amateur Radio Association Scholarship Program, 9873 Lower Valley Pike, Medway, Ohio 45341. You can also obtain an application by e-mail to n8emo1@msn.com. Completed applications must be postmarked no latter than June 1st to be eligible for this years scholarship program. (DARA)

**

HAM RADIO SCHOLARSHIPS: THE FOUNDATION FOR AMATEUR RADIO

Another organization offering scholarships to hams id the Foundation For Amateur Radio. The Washington, D.C. area group will administer sixty-two scholarships for the academic year running from 2002 through 2003. Licensed Radio Amateurs may compete for these awards if they plan to pursue a full-time course of studies beyond high school and are enrolled in or have been accepted for enrollment at an accredited university, college or technical school. The awards range from $500 to $2500 with preference given in some cases to residents of specified geographical areas or the pursuit of certain study programs. Additional information and an application form may be requested by letter or QSL card to the FAR Scholarships, Post Office Box 831, Riverdale, Maryland, 20738. (Foundation For Amateur Radio)

**

INTERNATIONAL - SOUTH AFRICA: SA RADIO AMATEURS OF THE YEAR NAMED

Turning to international news, South Africa is honoring two of its own as that nations Radio Amateurs of the Year. Q-News Graham Kemp, VK4BB, brings us the details:

--
The South African Amateur Radio Development Trust have announced the winners of the 2001 Siemens Radio Amateur of the Year Award. This award is made annually to a Radio Amateur who has made a major contribution to the Amateur Service either on a technical or development basis in ZS land.

The award has been bestowed jointly on Bradley Phillips, ZS5BP, and Garth Wilson, ZR6CY. ZS5BP for his work on the introduction of Iphone and the development of the Internet Radio Linked project. ZR6CY for his continuous efforts to develop communication skills amongst the youth. He has to date presented no less than 80 camps for Voortrekkers to learn the Morse code and basic communication skills.

For Q-News Australia, I'm Graham Kemp, VK4BB, reporting for the Amateur Radio Newsline.

--

This award is considered as South Africa's equivalent to the Dayton awards presented here in the United States. (SARL News, Q-News)

**
INTERNATIONAL - UK: KENWOOD TROPHY AWARDED TO G3XWH

Meantime, over in the U-K, Richard Horton, G3XWH, who chaired the RSGB's Future Licensing and Examination Forum has been awarded the Kenwood Trophy. This, for his significant contribution to training and development in amateur radio.

Horton recently retired from the Radio Society of Great Britain's Board where he was responsible for amateur radio development. His committee was responsible for much of the work that went into the creation of the new U-K Foundation Class license. (GB2RS)

**
DX

In DX, DJ4KW and DK9GG are currently active from Belize as V31YN and V31GW, respectively, through early February. Activity is on CW, RTTY and PSK 31. (RSGB)

And IN3QBR will be active from Vientiane as XW3QBR until the 31st of July. He will be joined, from the 20th of April until the 10th of May by IN3ZNR operating as XW3ZNR. (OPDX)

And R1ANF began operations as CE9 slash R1ANF on the 29th of December from a Chilean base in the South Shetland Islands. He is active on 10 to 28MHz with 100 watts to an R6000 vertical. For all three QSL as directed on the air. (RSGB)

**
THAT FINAL ITEM: CELEBRATING THE LIFE OF ED CLEGG W2LOY

And finally this week, if you were on the VHF bands in the 50's, 60's and 70's then the name Clegg Labs touched your ham radio operations. And as we hear in

this report, the family of the man behind the gear is inviting you to help celebrate his life.

--

Even if you did not own any Clegg gear, the chances are that you talked to someone on the air who did. Whether it was the top of the line Interceptor receiver and Zeus transmitter or the entry level 99'er transceiver, it was easy to spot a Clegg signal by its almost overpowering modulation that seemed just right for the R-F carrier it was on.

Almost every product that carried the Clegg label was designed by the company's founder Edward T. Clegg, W2LOY. When he moved the company to Pennsylvania in the 1970's, Ed took the call W3LOY. Likewise, after retiring to Ohio he traded the 3 for an 8, but kept the famed L-O-Y suffix.

And regardless of the call area, Ed Clegg was first and foremost a communications designer well ahead of his time. Even more important, he was a positive influence on just about everyone with whom he came in contact.

Ed Clegg left us last September at age 80. Now, his wife Martie will be hosting a gathering in March near the Clegg home in Lancaster Ohio. The purpose is to celebrate the life of Edward T. Clegg. And they are asking you to help.

Martie, her daughter Linda and Linda's husband Rob MacGuffie, K2HZN, are asking anyone who knew Ed to share in the celebration. They know that most of you won't be able to be in Lancaster Ohio on March 30th. But some of you do have memories, stories, photos and other Ed Clegg memorabilia that would help to make this day even more unforgettable.

If you have something to share, please contact Linda and Rob before the end of February. Their address is 70 Province Road, Gilmanton New Hampshire with a zipcode of 03237. Rob's cyperspace address is K2HZN@yahooo.com.

For the Amateur Radio Newsline, I’m Cathy Anno, KB0FDU.

--

By the way, a number of us here at the Amateur Radio Newsline began our ham radio careers using gear designed by Ed Clegg. In fact, our producer Bill Pasternak, WA6ITF, got to know Ed while Bill was still a teenager operating A-M on the 6 meter band. (Clegg family)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at

Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm _____
saying welcome to the year 2002, 73, and we thank you for listening." Amateur

I said girly porn or guy morn. I never said anything about kiddie porn. You are a very dirty old man if you look at kiddie porn. That is SICK. I guess thst would go along with you though always bringing up the war and crap. And I can't type. LOL. I don't have to say fuckwit every second word like you. I don't need to be a baby and swear every second word either. Does it make you feel cool trying to fight with everyone? Do you feel cool swearing to everyone? I think you need to go into some rehab for your problems, What a very dirty old man.

If you guys wanted to be anonymous, you are going about it all wrong.
Make sure you know what you are doing.
For one Dev, you live in Canada, near Calgary and you use the Shaw
Residential Internet service.
Come on, guys. Keep it clean, keep it on track and remember that this
is a Radio Shack newsgroup. You guys haven't mentioned anything about Radio
Shack in all of your flames.

Sounds like you are the one spewing, Twisty. If given a personal
example (WebDoc) you squirm away from it. If given URLs to case
studies (Sparky), you twist away from them. You asked for 'a credible
source', but your game is to discount ANY source anyone comes up with.

Thanks for being a big fat example of how freeloaders are sleazy,
sefish and evasive rather than genuinely concerned about their fellow
citizens.

198. CB Outlaws Make ALL Radio Ops Look Bad

Newsgroup: rec.radio.cb
Date: 2002-02-02 22:35:21 UTC
From: voobner@yahoo.com
Message-ID: <fbc7a2.0202021435.2a3ee7@posting.google.com>
Source record: 114510
Cross-posted to: rec.radio.cb,rec.radio.amateur.policy

I ran across the following story in a club newsletter.

At first glance it appears to be fuel for anti-ham/pro-illegal CB fires. But if you read closely, you can see that the ham in question has not only behaved responsibly, but he is actively being supported by both local and national ham organizations in dealing with the problem. Illegal CBers would never come forward to take responsibility, much less identify themselves.

Note the city council's reaction in paragraph 3. Anger and frustration. Can you blame them? The problem of high-powered CB outlaws running spectrally-dirty gear is epidemic throughout the USA. To the general public, a "radio operator" is one of these outlaw CB characters.

Most hams don't care what happens in the 11 meter band as long as it does not affect them. If they continue to maintain this policy they will face an increasing hostility in the eyes of the public who can't tell the difference between a licensed ham and a guy running 10 KW with an echo mike on channel 6.

-Aaron-

RFI COMPLAINTS, CITY COUNCIL INVOLVEMENT
FRUSTRATE MICHIGAN AMATEUR

Rob Underwood, W8YRB, says RFI complaints have him at his wit's end. The
Wyoming, Michigan, ARRL member says his efforts to resolve some neighbors'
complaints of stubborn interference are at an impasse. To add to his frustration, the Wyoming City Council now has asked the FCC to step in, and
the situation has erupted into a media spectacle that, he says, hasn't done
much for ham radio's image.

The FCC's position with respect to RFI to consumer devices is that the consumer device--telephone, stereo, TV or other appliance--most often is to
blame, and that consumers need to deal with appliance manufacturers. Underwood says he's gone the extra mile to resolve interference complaints,
but one neighbor a half block away has become especially intractable,

pinning blame for interference to her telephone and touch lamp squarely on
him. The woman ultimately complained to the city council, which met January
21 and unanimously agreed to contact the FCC.

****Underwood said city council members "threw their hands in the air, and most
of them said it was my station that needed to be 'filtered' and didn't want
to hear what my solutions were." ****

Twenty one amateurs reportedly attended the
council meeting on Underwood's behalf, and one Council member praised
Underwood's attempts to assist and to educate everyone.

Underwood said, however, that several other neighbors turned up at the
session with new RFI complaints he hadn't heard before. He's volunteered to
assist them. Underwood says media coverage has focused on the neighbors'
complaints rather than on his efforts to respond to them.

The neighbor's touch lamp seems especially susceptible to RFI and even
flickers when he keys his 100-W mobile transmitter while driving by her
house, Underwood said. Although he installed some ferrite chokes on the
lamp's power cord, the problem persisted. The neighbor has refused further
offers of help.

Underwood reports that his own home is essentially free of RFI problems,
with the exception of his cordless telephones when he runs his amplifier. He
said he installed RF chokes on telephone equipment for his immediate
neighbors who had complained of problems, and they have not reported any
interference since.

Underwood has the full support of ARRL Michigan Section Manager Dick Mondro,
W8FQT, who noted that the FCC Detroit Field Office was also aware of the
problem and has been cooperating in resolving the issue.

ARRL provides information and resources to deal with RFI problems on the
ARRL Web site's RFI pages .

199. Sigma 4 vertical element reinforcement

Newsgroup: rec.radio.cb
Date: 2002-02-02 23:00:28 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3C5C6F8C.6710722D@qnet.com>
Source record: 114511

Hello All:

Just had a nice chat with a guy in South Africa and a guy in England, who was having problems with the Sigma 4 Base Antennas.

Seems the Sigma 4 antennas where experiencing a lot of movement and swaying causing the antennas to come loose and fall apart after a few months to a year of use. In heavy winds.

By replacing the second to the bottom vertical element tubing, a 36 inch piece of 1 3/8 inch OD, 36 inches long aluminum tubing, with a 121 inch length of tubing, while keeping the exposed length the same, will reinforce the antennas bottom vertical element significantly, reducing the swaying to some degree.

The extra length of tubing is used to reinforce the bottom length of tubing that is 1 1/2 inch OD, 88 inches long, while keeping the same length of exposed tubing of the 1 3/8 inch OD tubing the same. This keeps the tuning the same.

The 1 1/4 inch OD tubing 36 inches can also be replaced with a longer piece as long as 144 inches. This to will help to reinforc the strength of the main vertical element.

Adding Marine Grade Stainless Steel Hose Clamps is also a big plus.

E-mail me for a quick and dirty diagram.

Jay in the Mojave

Hey all,

I just install a Uniden Pro520XL in my 79 CJ7. I am getting what I believe is a lot of engine noise. I bought a noise filter from radio shack and it seems to be helping a little. Anything else I can do? I have it hooked up directly to the battery(after going through the filter). The antenna is a 4' firestik II mounted on the passenger side rear.

Thanks!

Joe

Look, Aaron, you stupid f*ck, his email address consists of a US Amateur
call sign @ some ISP. You always ASSume wrong.

George, even if you get the VFO to work above channel 40, the radio
will need a complete realignment before it will work in the voice
portion of 10 meters. Good luck. I'm sure someone has the info you need.

If your noise increases in frequency as the RPM's increase, try a
basic tune up; cap, rotor, wires, plugs, point, condenser. You
may find your MPG & performance increases as well. <;

Snooty hams probably wouldn't answer him on the amateur NG's. So
he came where people are friendlier and more likely to lend a hand.

The way you act, you might as well be a hamateur.

Now I'm going out the have a lot of fun. I won't be back
until tomorrow. Too bad mommy won't let you out of the house.

Hello George:

No there is no channel lock on the VFO's or radios.

If I remember right there is one or two adjustments in the VFO that will allow the frequency range to be adjusted. Using a frequency counter is a big plus.

I believe we use to get up to 500 or 600 with the VFO's, if adjusted properly.

Good luck.

27.600? That's not in the 10 meter ham band. Why would a ham want this VFO?

"Vigilantism"? I suppose if I showed up at your house with handcuffs and tried to arrest you for transmitting illegally, that would make me a vigilante. But both you and I know that's NOT what I do.

Does it bug you that private citizens often provide info about illegal operators to the FCC? How about someone who calls the local police to tell them they see a robbery in progress? Jeez, you fellas on the wrong side of the law sure are being abused :)

I am more familiar with the Swans than the Siltronix versions. It took
three or four ranges to cover the 10 meter band. The 450 kHz spread you
are getting is pretty close to the max range of the VFO.

It's been a long time since I've messed with a cb but I somewhat remember
the 135 and vfo's.

You should first discover if the vfo has enough output to drive the radio at
the freq of interest. Those vfo's could be mistuned and put out less than
what the radio needs for drive. Next and most likely is that your radio is
not aligned well enough for that vfo to work.It may be tuned in such a way
that the rig and vfo combination is going into a spurious oscillation
operation.

The 135's were a bit tricky to align for xtra ch's. Unless you are stuck
with that radio I would move on to something a bit easier to modify or
something that already has what you want.

If you are stuck with that rig be prepared to spend a good deal of time
"tweaking" it to make it do what you want.

You might start by realigning the rig back to stock. You might also want to
bring the vfo back to normal operation making sure it's output is consistent
throughout it's tuning range.

It would help matters immensely if you had access to (at minimum) a scope
that covers 30 mhz and even better would be a spectrum analyzer.

I don't know what tools you have at hand but I'd say the aforementioned
would be the only place to start.

I wish you luck without the right tools.

Jay and the rest,

What I am trying to do is to get this rig on 10m. I had one like this in the 70's and I was able to get it to operate on 10m and it worked real good. I am not trying to be a outlaw cber. There is 2 tuning caps on the bottom of the VFO which on the last one I had that was all I had to do was retune it to 10m. Far some reason this one won't tune. My guess something is wrong with the VFO.

And to Aaron the reason I am asking this question on the CB group is I figured you guys would know more about them

George

"Aaron H. Voobner" quoted in part ...

"The FCC's position with respect to RFI to consumer devices is that the consumer device-- telephone, stereo, TV or other appliance--most often is to blame, and that consumers need to deal with appliance manufacturers. Underwood says he's gone the extra mile to resolve interference complaints ... The neighbor's touch lamp seems especially susceptible to RFI and even flickers when he keys his 100-W mobile transmitter while driving by her house, Underwood said. Although he installed some ferrite chokes on the lamp's power cord, the problem persisted. The neighbor has refused further offers of help."

Wrong Mr. Underwood. We, as amateurs, should *never* install anything at anyone's home. Once we do that, we then accept responsibility for further interference (and further cost if it doesn't work). "That guy put something on my TV and now it doesn't work right" We can tell them where to buy ferrite chokes or high pass filters (for example), and can advise them that this might help with the problem, but that is as far as I believe we should go to "help" them. I also find it extremely hard to believe that 100 watts would cause interference to *any* modern appliance (especially mobile) A crock if you ask me. I typically run about 80 watts to a G5RV through a low pass filter and am yet to have *any* complaints from neighbors in the three plus years I have been running my amateur equipment adjacent to them.

Was the VFO meant for 10 meters, in the first place? If so, then I would guess that someone has modified the capacitor/inductor trimmers to move the frequency down to the 11 meter band. You would have to reinstall the original components (or remove any extra added components) to get the tuning range back to what you are used to finding.

I run 100 watts to a G5RV in the apartment building, without a lowpass filter, and have yet to have an interference complaint as well. And yes, the neighbors know I'm a HAM, and they know that if they DO have an interference problem, to drop me a note so we can determine if it's me or something else.

221. Ham IV Rotor for Sale (chicago area)

Newsgroup: rec.radio.cb
Date: 2002-02-03 10:13:22 UTC
From: maniac9188@hotmail.com
Message-ID: <216e88a0.0202030213.2dd413c0@posting.google.com>
Source record: 114533

I have an older Ham IV rotor for sale. It was only up for 3 months to test different antennas on a temporary tower. It is mounted inside a custom-made Rohn 25g top section, which is 6 feet tall. The section has been rewelded, with the rotor inside. The section has a super heavy-duty flange bearing- (complete with 4-bolt base, and zerk fitting for grease)- bolted to the flat top of the section. The rotor is mounted 3 feet from the top, on a Rohn AS25 accessory shelf. The section in in very good shape, and will work for many years worry-free, if properly maintained. The section also includes 48 feet of 8-conductor rotor cable, the original CDE control box, and a 12' section of 1 7/8" O.D. heavy-guage fence post pipe (that would mean there would be 9' of exposed mast). I will not ship these items, so I am looking for someone in the Chicagoland area, that would be willing to buy.... This section will bolt right up to ANY rohn 25g section. $275.00 if I deliver, $250.00 if you pick up.

Once again: I WILL NOT ship!

I also have a Signal Engineering 'White Lightning 4' Quad beam antenna. All of the wires are intact, and I have the instruction manual. This works very well if you can't go over 50' high. I had it at 45', and I never had a problem being heard. check it out at: www.signalengineering.com

E Mail, and we will discuss price.....

Thanks,
Maniac

I run in an apartment complex as well up to 150 watts. Chris, touch lamps are notorious and do not make much of a case for much of anything. The only thing I have gotten into is a car stereo of all things; giving it the whumph with SSB or big volume swings with CW was almost fun. Truthfully, I think the owner would have liked to be able to do it himself much like the guy who blew a coupling cap in the amp and invented fuzz guitar.

I have a ARF2001 scanning transceiver for sale .(has clock) . Condition
is good.
Tip of scan switch broken but still lights up and works well.

If you are reading this , then you know how scarce these things are .

Make me a reasonable offer ?

thanks for reading .
Raz.

Hello George:

The VFO's where meant to be installed on to CB Radios to allow them extra channels, then the PLL hit the market, and it could be done wits a simple switch or two.

But if I remember right the CB Radios where modified internally along with the VFO installation for 10 meter operation. There was a lot of articles in 73 magazine that told of CB to 10 meter conversations. The reference crystal oscillators where modified by replacing the reference crystal to a higher frequency, or even in most cases, installing several reference crystals, and switching them in the circuit with a switch, for different frequency bands.

And of course the radio had to be realigned to work on 10 meters.

If you look around the CB sites, I am sure Lou Franklin has a book on the PLL and probably will cover the use of VFO's.

The trick thing to have back in the 70's was a Ham VFO, on the radio, with a custom digital readout, indicating frequency you where on. Oh yeah the memories. Even some hams had these.

Good luck again.

Hey man-

Unfortunately the cheaper the radio, the poorer the filtering in the radio.
No amount of tinkering will help that much.

It's not all the radio's fault. We are presuming that it is ignition noise, right? Noise level increases with engine speed, and ceases when the engine is turned off? Certain it isn't fuel pump noise? Bot the pos and neg wires go directly to the battery and at least the positive is fused? Check the battery ground to the frame and to the engine to make certain they are clean. Make sure it isn't just a single wire to one plug--perhaps a regularly spaced tick? Disconnect the antenna coax to see if it is coming in via the antenna. If you did the connectors yourself, check for continuity.

Hi Joe,

It might be from the MSD box. If you bypass the box temporarily
i'll bet the intensity of the noise goes down. I have the same problem
with my stereo in my 73 vette which has an MSD6a but only when
the volume is low.

Hope this helps, Good Luck
Tom

If the noise varies with engine speed, which it most likely will, the culprit could be a bad diode in the alternator. One way to check this is to use an AC voltmeter across the DC input lines on the radio. If you see AC there, you have got a problem.

Does anyone in the USA use diesel powered engine vehicles when driving their alternators at keydowns etc, or do they produce insufficient revs?

I know they are slow revving, however, diesel engines seem to produce quite a lot of torque.

Here in the UK, recently sales of diesel engine cars have really taken off, due to their fuel efficiency.

Just curious!!!

Cheers
Toxic_waste

Silly tho it may sound, be sure the hood is electrically connected to the rest of the body if it is shown that the path is thru the antenna rather than the wiring (disconnect the antenna to check). Then be sure the body is connected to the ground system, if it has been wrecked or restored it is real possible that the body has a crummy connection to the alternator bracket et al. It was not uncommon for people to leave off the ground straps and have such things happen as the headlites getting brighter when the clutch is depressed.

Does the CB radio itself have a little meter on the panel? If so, you may
have everything you need right there - read the CB's manual for anything
related to "SWR."
Tuning the antenna is then very easy - if the antenna is good.

TX diesel engine idle at 600RPM's and drive anywhere from 1500 to 2300 RPM. The diesel engine does not turn any slower than a gasoline engine,some fire trucks using 250 HP Cummins B (small Dodge pick ups) routinly turn 12VDC 500AMP alternators (Leece-Neville) to supply power for lighting and equiptment
cant say about keydowns
with all the attachments that you could add to the diesel engine (extra pulleys & drives) I think it would be a great choice for power generating

One night, I ran a CB net from the top of a 6 story apartment building. I set up my 1/4 groundplane on the camping mount I use with it, and a stock radio connected to one of those jump-start things.

The view was fantastic, and the comms were great. I stayed up there until the thunderstorm came through around midnight. I quickly disassembled and ran inside.

The CB SSB club I'm in likes to go to obscure mountain tops to talk DX. At the time of most of the camping/radio adventures, the hambos were only techs. Since that time, they have learned the code, and their elevated tickets have gone to their heads, once again proving my point: Once a person gets a ham ticket, they are NEVER the same, even when (and if) they come back to CB.

It's too bad, we had quite a good time together for a few years.

Hi Mac! (note that none of us McSomethings really enjoy being called
'Mac')

Not trying to put you down or anything but I think you may be confusing
cause and effect. If all they wanted to do was work DX on SSB with the
boys, kind of like Field Day where we tell our wives it's an emergency
exercise and go into the woods to drink beer and talk dirty, they would
not have made the plans to obtain Amateur privleges and carried them out.
No, they are never the same but they weren't the same when you were up on
the mountain but hid it well or you weren't looking - their success had
little or nothing to do with it except to the extent that they did and you
didn't. Not the only place this happens.

Back when dinosaurs roamed and I was a college freshman 500 miles from
home in a swinging dorm the realization came to me that I knew a number of
really interesting people, most of whom were in the process of flunking
out or at least flunking me out. So you do what you have to do and do
what you can do in the order of priority; ain't no big red S on my

sweatshirt. They went to work, you did not. Doesn't make you less of a human or a loser, it means they cared more than you did. Probably was not all that easy for them; it sure as hell was not easy for me.

Seems that you learned what the man meant by You Can't Go Home Again. And it is just as true for them as it is for you.

Dick N&#65533;BK

259. Re: AM vs SSB or maybe FM

Newsgroup: rec.radio.cb

From: StarrTerry <terry.box@which.net>
Message-ID: <3C5DCE60.F9E78B2A@which.net>
Source record: 114572

During late 1981 CB became legal in UK for the very first time, after rigorous campaigning. Before this many CB operators used AM and/or many multiband rigs which was available at the time such as Cobra 148GTL-DX/SuperStar 360FM

UK legislation made considerable differences to its USA and European counterparts. Mainly the frequencies which were 27.60125 - 27.99125 Mhz consecutive 40 channels using FM (UK 27/81). Making many AM and SSB rigs illegal.

To the horror of many operators they felt hard done by.
The European frequencies and channels were considerably less up to 23 channels and only FM to be legal. I early 1990s CEPT decided to standardize all this throughout Europe using ironically 26.965 to 27.405 Mhz FM.

It was agreed that UK 27/81 spec was to be discontinued but with a large number of rigs sold over time, it was impossible to close the band down immediately.

All I was suggesting was that 26Mhz to 28Mhz to be reserved for CB use for Universal standardization, so that rigs can be used world-wide. This will enable visitors to various countries will be able to use their CB rigs abroad (e.g. UK users in Europe and visitors to and from USA)

This subject was only a mere suggestion.

Terry

|Steve

I have seen a bird meter, I know they are test equipment, but they are not
the type I am asking about as they will not give the information I am asking
about, only a scope or other similar equipment will do that, and I own a
scope, as well as other bench equipment.
```

And mopar none of this was ment as an insult to you or any others, just adding to the discussion, I am not Aaron, I am a reasonable person, I do have my beliefs and opinions, and as the bill of rights, the constitution, and the decleration of independance tells us, I am allowed to have those. But at the same time I am not constantly shoving it down your throats either.

> I've heard it before. Been there, done that. I'll see it again.

You will indeed. And for any number of good reasons. Men marry, have kids, become soccer coaches, and develop different interests. Even when the interests are similar you are going to see people with common experience and aspirations hang together; the Berets and Lurps do not hang with the grunts -- it is just the way it is. If they told you or even thought the reaching of a desired goal was not going to change them or you for that matter they were mistaken or simply letting you down easy. Get used to it -- you are due for a lifetime of it.

In my age group, I am 58, we see the people return 'home' and bitch about the changes. What in Sam Hill did they expect to happen, the place turned into a shrine? I know my parents made my bedroom disappear asapy and I did the same. Life moves on and no one needs your war stories.

If pointing out the obvious is ornery, then ornery I be. If it will make you happy I will join you in a chorus of Wedding Bells are Breaking Up that Old Gang of Mine.

This maybe allot off topic but.

Twelve Rules for Raising Gang Members & Drug-Addicts

1. Begin with infancy to give the child everything he wants. In this he will grow up to believe the world owes him a living.

2. When he picks up bad words, laugh at him. This will make him think he's cute. It will also encourage him to pick up "cuter" phrases, that will blow off the top of your head later.

3. Never give him any spiritual training. Wait till he's 21 and let him "decide" for himself.

4. Avoid use of the word "wrong It may develop a guilt complex. This will condition him to believe later, when he is arrested for stealing a car, that society is against him, and he is being persecuted.

5. Pick up everything he leaves lying around - books, shoes, and clothing. Do everything for him so he will be experienced in throwing all responsibility onto others.

6. Let him read any printed matter he can get his hands on. Be careful that the silverware and drinking glasses are sterilized, but let his mind feast on garbage.

7. Quarrel frequently in the presence of your children. In this way they will not be too shocked when the home is broken later.

8. Give a child all the spending money he wants. Never let him earn his own. Why should he have things as tough as you had them.

9. Satisfy his every craving for food, drink, and comfort. See that every sensual desire is gratified. Denial may lead to harmful frustration.

10. Take his part against neighbors, teachers, and policemen. They are all prejudiced against your child.

11. When he gets into real trouble, apologize for yourself by saying, "I never could do anything with him."

12 Prepare for a life of grief. You will be sure to have it.

This was a church hand out, I think. The bottom has been cut off as to prevent me from giving credit to the author.

I have 5 BTX-126 UHF ht radios all on 464.5500 for sale.These are Motorola radios with Radio Shack name on them.They all work perfect.I only have 2 wall chargers for them.They are good rugged radios for the jobbers out there.I am open for reasonable offers on the whole package(5 radios and 2 wall chargers).I am in Mass.
Please don't insult me.I want to sell these or may do a little trading for good scanners.Email me is your best bet.
Thanks for looking

This had crossed my mind (quite a short journey).
One great way to fight illegal porn would be to send such messages out,
infecting those sick enough to follow it. But I wonder how many of the
police computers would get infected as they try to gather evidence of a
reported crime?

There was a porn link posted to another newsgroup that was said to be a
virus, but how did that person know it was a virus?

A guy walked into a barber shop, sat on the barber's chair and said -
"I'll have a shave and a shoe shine."

The barber began to lather his face and sharpen the old straight edge
while a woman with the biggest, firmest, most beautiful breasts that he
had ever seen knelt down and began to shine his shoes.

The guy said, "Young lady, you and I should go and spend some time together."
She replied, "I'm married and my husband wouldn't like that."

The cowboy said, "Tell him you're working overtime and I'll pay you the
difference."

She said, "Why don't you tell him... he's the one with the RAZOR shaving
you!"

> please e-mail trevor.goodenough@btinternet.com
==

Hi Trevor

The green one is the lower bandwidth one for the 3 band models, but there is
also an orange type for the radios that cover more bandwidth.

A VCO equiv. to the orange type was available from Knights (www.kcb.co.uk) at
around £8, although I haven't checked recently. The orange type can be used
to replace a green block, but not the other way round.

I have one or two green VCO blocks knocking about somewhere if you are stuck,
post can't come to much for one of those.
You can e-mail me (name below) @ lineone.net (put "Jumbo" as the subject to
avoid my spam killer), or mail me from
http://www.brainbuster.supanet.com/mailer.htm

==

It's not just drift... some radios are slightly off all the time, straight from the box.
Also, you have to rely on every "rig doctor" and engineer having a good frequency counter that does not drift. You could sent two identical radios to two different places to be tuned, and they may not be spot on to each other.
Frequency counters can drift with temperature or over a time period, a trimmer cap on the xtal can seriously add to drift problems. How many "rig doctors" and members of "Lou's Army" do you think check that their test equipment is accurate?

That explains why I did not receive the message.
Put this person in your kill file, he has been doing script tricks on
newsgroups for some time.
While you're at it... disable scripts while reading news messages, there is
no good reason for a script in a news message.

I think it's the Ranger 6900F something.

The add-on 2 pill amplifier has problems with overheating and
RF feedback. You are much better off with separate units.

WebDoc,

Don't mind those two guys. They are just typical antisocial outlaws
who put people down for how they look. Their idea of big fun is to
"put watts" on someone trying to use the CB band.

Is it any wonder folks like Sparky, N8, Leland, and George get on
their case?

Two stories. The antenna is about 15 feet from the building in the pine trees out front. The one tree hides the coax and ladderline nicely.

Source record: 114699

Joe,
If one filter helped the noise problem, then try adding
another
one (cascaded filters). Sounds like the filter was just not
'large'
enough to get rid of all the noise.
Something else to try. Disconnect the antenna, is the noise
still
there? If so, then power line filters aren't going to 'cure' the
problem. Grounding body panels tot he frame will help.
Good luck...
'Doc

I have lots of CB Radio equipment for sale..... Just sitting there and not being use. All for $300.00 but you also have to pay for shipping.

Here we go :
Emperor TS- 5010 with matching Power Supply TS-5011
D104 Silver & Black Eagle... Plus 1104C Desk Mic. Yes...3 Mic's !!
Astron MS-35A, Samlex RPS 12 15 amps. Yes 2 Power Supplies !!
RMS International SWR/Watt Meter with Match Box
RF Limited TV Low Pass Filter

Bonus !!!!
Uniden 800xlt scanner radio !!
All Must Be Sold Together !

ALL IN GOOD CONDITION !!!!

Who climbs virtually, when Laura scolds the solid ticket at the college? If you'll burn Austin's dorm with farmers, it'll strangely tease the jar. Hardly any outer films measure Yolanda, and they superbly fill Frederic too. Who did Joie walk towards all the weavers? We can't attack teachers unless Will will lazily attempt afterwards.

There, Katherine never lifts until Andrew promises the think jacket angrily.

Until Walter laughs the cases bimonthly, Oscar won't seek any empty caves. Will you dye about the bedroom, if Will amazingly opens the hat? Where will you hate the rude wide walnuts before Ben does? She will solve usably, unless Roxanne wastes onions near Quincy's enigma. She'd rather love furiously than kick with Roxanne's upper yogi. No shoes subtly excuse the sharp shore. Occasionally Rachel will shout the boat, and if William dully lives it too, the frog will depart below the pretty corner. Some candles learn, mould, and care. Others frantically grasp. We smell the smart smog.

Fucking don't irrigate a cobbler! Margaret's bowl covers alongside our book after we kill with it. I am deeply cosmetic, so I nibble you. They are improving around sweet, through glad, before lower bushs. We like them, then we generally irritate Edwina and Angela's angry cap. We will daily converse within Carolyn when the stupid tyrants recollect above the strange winter. Simone pours the frame in front of hers and surprisingly behaves. The quiet floor rarely arrives Jay, it

cooks Donald instead. I was playing hens to short Ignatius, who's changing alongside the exit's ladder. For Amber the lentil's brave, without me it's ugly, whereas among you it's moving sick. Both explaining now, Mel and Gary answered the old rooms in back of noisy shirt. You won't expect me looking at your younger star.

Hey, go jump a painter! Are you difficult, I mean, cleaning within thin units? Get your neatly dining printer beneath my ventilator. If the filthy potters can talk wanly, the bitter spoon may reject more doorways.

He might call blank bandages without the dull full satellite, whilst Rose wastefully pulls them too. All lean stale pitcher tastes dryers between Debbie's dry pin. Ron! You'll recommend buckets. Hey, I'll receive the sticker. Hey, it believes a dog too cold with her weak forest. As eventually as Debbie dreams, you can join the fork much more inadvertently.

got this from a friend in France!

****
Bonjour,

Coming back from 5U country, I want to deal with you a funny story ...

Last october, I have decided to go on vacation in 5U to see something different and check what Africa can offer to me. As very often in Africa, I asked an ham call, 5U0T.
No answer received but I went there anyway...
I visited the Ministry of Communication in Niamey, I met there the people issuing the ham licences and he told me that I just have to fullfill an other application, that there will be no problem for the processing, the fax I have sent from France did not reached him, hummm

Days passing one by one and still no answer, the local chief is ill or not in the office, etc ...

After some days and ... we had the visit from the local policemen ... someone has given us, but who ??

Yeah .. of course !!! An italian team, planning to come here in February 2002 !

Our Icom706 and some dipoles were not welcome as per the judgment of these "dollars eaters" ...

So, should it be known that I2YSB, IK2DIA, I2UIY, IK2WXV, I1HJT and IZ5BRW have
asked, via the help local "friends", the Nigerian police to come in our hotel and shut down our radio plans. Is that HAM SPIRIT ??

And you know what ?? These Italians have received the 5U0T !! Funny, isn't it ?!

I have yet to see someone with a diesel engine compete. Even though, MANY drivers around the country have additional alternators added to their semis. There is a guy on www.chickenclub.com that runs a 2x8 davemade in a Mack. (its not a 10 pill..., look at the picture inside.) US Mailman has a nice setup too..., but I have yet to see ANYTHING diesel pull up to the line to key. I'm not saying it can't be done, with added belts and alternate pulley ratios (to make the alternator spin faster)....., I just have never seen it.

I would like to see a 'DC' class, that you are only allowed to use ONE alternator, thats to power the vehicle AND the amplifier... and only ONE antenna, at a 9' height resriction. Size of box doesn't matter, because that won't be checked. The only things that will be checked, will be the amount of alternators,(1) and the amount of antennas.(1)

You can run anything inside the vehicle as you wish.

I really think that would get some more people up to the line. I mean, you could start this class 2-3 hours before the first 'REAL' competition, and charge $10.00 a head.

What do YOU think?

Maniac

One thing is to be realized here first, even before we get started. No matter what you buy, be it an amplified radio, or a seperate unit. You will not be the biggest radio on the air. Troubleshoot your radio system, to make sure it is as 'EFFICIENT', as it can be. You must start with the antenna. The antenna is close to 75% of your system. The biggest radio in the world won't get out on a bad antenna system. Make sure you have NEWER coax cable (replace it every six months in a big truck).For your application, a single 18' length of mini 8 (rg-8x),with hand-soldered 'amphenol' pl259 ends, will work perfect.(I like the Grey stuff better, but its up to you. Next get yourself a GOOD mount, preferrably with a stainless steel HD stud. What kind of radio you have will determine what kind of antenna I will recommend. If you plan to go the Ranger 2970 or Galaxy route, The Nugatron LX1000, would be my #1 choice. I'm sure there are many who will disagree, but this antenna CANNOT be matched for the price. The recieve on this thing is unbelievable!! Very broadbanded too. It can be seen at www.e-nug.com. Dennis is very good people. I have had a few come back broken (from trees, or low bridges or doors. I even had one broken by a barnowl rolling at 65mph!)I send them to Dennis, and he either repairs it, or sends me a new one! Lifetime warranty! Good product! If you slipseat, buy a 4 1/2' skipshooter.... Its the best performing fiberglass antenna out there, and it looks just like the one that came on the truck. (except for the tunable tip)... As for tuning the antenna, I use an mfj259b swr analyzer, but I don't think you will use it all that much, to go spend $225.00 on a meter. Look for a good meter that is switchable between forward, and reflected watts. These meters will also measure swr. I use swr as a 'ballpark' figure, the lowest swr doesn't always mean the antenna is working at its optimum efficiency. I always tune for lowest reflected watts. and is usually about 1-2 points higher than lowest 'tuned' swr. For your radio, I wouldn't really recommend the Ranger 2970 (built-in linear), I would much rather have a Galaxy... with an external amplifier. Take for example, a Galaxy 73V. Excellent radio, loaded with useful features. This one is the only Galaxy mobile that has an internal swr meter. You can see it here http://www.galaxyradios.com/73.html .. I also recommend the Texas Star 350HDV amplifier That can be seen here: http://www.texasstar.com/export/350vEX.gif the info and specs can be

seen here: http://www.texasstar.com/export/specifications.html ...A 350 is about as big as you can go, without having problems with your electrical system. This amp will deadkey almost 200 watts, and peak out around 375-400 watts (all the way up). This will squash the hell out of a Ranger 2970. Even though it says it can take a big deadkey for drive, i have found that with no more than 3 watts out of the radio, you will sound very clean, but still doing very well on the wattmeter. Don't forget a good Microphone... An Astatic 636L works very well. Some like the Roadking 56, but I think it is too bassy for my voice. The next thing you need is a external speaker..... I have not used one that works as good as the Uniden ESP26. I have personally had one for about 5 years without any problems.

Before buying your radio, find a reputable technician that you can trust. The best technician near Chicago is at Real world Electronics, in Monee, Illinois. The shop is about 20-25 miles south of Chicago, on I-57 exit 335 (manhattan/monee road), in the Petro truckstop. The guys name is Sean.
As far as I know, he doesn't do mail order..., So you will have to pay him a visit. As for online CB merchandise: check out www.bigradio.biz its a new site with many things you just can't find anywhere.....

Take Care and Have Fun,
Maniac

"Very broadbanded too."

And if it is "very" broadbanded, it is also inefficient! The wider the bandwidth, the sloppier
a radiator it is. An extremely efficient antenna is also NARROW-banded. Unfortunately, you
can't have both. In the CB business, broadbandedness is sold as an asset--especially to those
who like to "freeband". For those who use amps, they don't notice the loss as much because
that and the other "loud n' proud" tricks somewhat mask the antenna's inefficiency.

302. Re: AM vs SSB or maybe FM

Newsgroup: rec.radio.cb
Date: 2002-02-04 17:41:16 UTC
From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <IEz78.69349$Up4.3169871@e3500-atl1.usenetserver.com>
Source record: 114714

And again there are reasons why that can't be done as far as the USA is concerned. A good bit of that spectrum belongs under the jurisdiction of a little-known agency called NTIA (National Telecommunications and Information Agency). Its authority is higher than FCC.
There are still military assignments in the areas above and below the 40 CB channels. They
aren't likely to give these up anytime soon. It matters not how OFTEN they are used, and
people can postulate about the frequency of such use, but the assignments ARE there. Whether
or when they are used is up the the agency to which a given frequency is assigned.

Another reason is tied, too, to the rejection of the 155 mile abolishment petition. FCC is not
about to countenance a competing hobby to that of the US Amateur Service. Their rationale
is that the Amateur Service already exists, and hobby use was not what they had in mind when
CB was established. We might not like that, but it is the way it is. Obtaining the various ham
license classes is much easier since CW has been reduced in importance, and it may even be
removed as an international requirement after next year. As far as approving another hobby
service such as 27 MHZ CB, it just ain't gonna happen. I can tell you from attending the FCC's
and Riley Hollingsworth's enforcement forums, they aren't at all happy with the activity above and below 27 MHZ, and that "image" (amps, "freebanding" export radios, etc.) is not helping
CB Radio's efforts to obtain more privileges. Unfortunately, it's not the "good" operators that
are attracting attention; it's the bad apples that are spoiling the barrel. Just like those in here who like to point out ham radio's bad boys in an effort to discredit the entire avocation, those
CB bad boys create bad press among those with whom CB radio seeks favors. Image is everything no matter what endeavor it is. Until that changes, CB radio will remain exactly where it is--lost in the 50s from whence it came. Or it may be "sunsetted" and/or moved up
into bands where the 155 mile limit won't even apply.

Everything changes over the years. How CB changes will be up to the operators themselves
insofar as becoming more than it is right now.

** snipped see the original **

Tim you are really straining for this one. Niger, not Nigeria so the cops can't be Nigerian, is part of the old French Central Africa and borders on Algeria, Libya, Mali, Chad, Burkina Faso, and not too surprisingly Nigeria which is not exactly the hotbed of Western Civilization as we know it. Nor, it would appear, is Italy.

: I am using a 90-7 vfo on my Cobra 135. The problem I am having it will
: not go above channel 40 no matter where I tune it to. Was there some
: kind of channel block installed in these vfos?
: George

Hi George,

It's legal to use a vfo to receive frequencies above 27.405Mhz, but Boobner will spam you with a batch of bootleg diatribe crap, so don't believe what he posts. It's not even his real name. We call him El fake'o...

Are you sure that vfo model works on your radio..? You can go to the http://sonic.ucdavis.edu web server and look a the amateur radio web page which has a sub section siltronix page(s). Hidden inside (yet to be posted to the public) are the Siltronix 90 VFO data sheets which might help.

They are quite large, but you can down load the three pages by entering the below links into your browser.

http://sonic.ucdavis.edu/siltronix/svfo1.jpg
http://sonic.ucdavis.edu/siltronix/svfo2.jpg
http://sonic.ucdavis.edu/siltronix/svfo3.jpg

To down load them as files, hold down your shift key when you hit the enter key.

Make sure you have the right vfo version for your radio. There might be some other help on the page and we're here to answer questions if you post them.

cheers

I have some nice power suppiles that I kinda made dissapear from my company's inventory.

1.) Heavy duty Signal transformer brand looking transformer with dual secondary out puts at 20v 16.3 amps each.
2.) Two nice big caps about 5 inches tall rated at 12000 Micro farads 100 v
3.) Rectifier part # vp12510
4.) Shaffner brand filter part # fn2060-16-06 in the primary
5.) Fuse holder and fuse

****** Non regulated *********
Email me for pics. Will sell these power sullpied whole or in parts.

Take no offence to this, but after checking out the site, I'd say that any
place that has to advertise their products with a large-chested blonde
holding/standing next to it, is selling garbage... Granted this MAY be a
good antenna, but the marketing ploy says junk... I'd suggest loosing the
woman...

Guess that just proves how clueless CBers can be. I don't suppose any of
them have a clue about the bandwidth requirements for the FM deviation they
are using for transmitting, and the effects it has on adjacent channels too?
A 5Khz deviation requires about 20 Khz of bandwidth. So those people on a
regular CB channel , 27, have that one used, and about half of the channel
above a below them as well. That's about as bad as running a dirty radio and
splattering the adjacent channels. Real considerate operators, not.

Best place to look for one would be from the person that sold it to you... I only saw three Cobra 135's, sold recently on eBay. Of them, only one was in working order and in the picture it had a power cord... The other two were sold as non-working... Which one did you buy? If the first unit, take it up with the seller, if either of the other two, then you shouldn't be bitching, as they were sold as non-working to begin with...

The Secret to getting a license in these places are $ or DASH ME
BoosMAN
as the local saying goes!! No dash, no cash, no license! BTW, HAM is
barely tolerated, CB OPS IS A NO NO!!!! Two way radios give the
locals
the itchy a** syndrome since they like to control local communications
in a given area.

Been there, gotta TEE SHIRT, Keep radio as a low profile! They know DX
is $$$$, so they love to squeeze what they can!

What can you do other than installing filters on the spark plug wires if the engine noise is still there after disconnecting the antenna?

With the front of the radio facing you about 2 " in from front of radio and
about 3 " in from your right hand side these are just approximate distaces,
you will see some detector diodes side by side fairly large glass diode.

You wouldn't be able to go that big (16 pill) in that particular
class. That would be one way we could really tell which boxes are
truly "better" than others, without overvolting, or multiple
antennas.......

You got that right but I really did not want to get into the economics of DXpeditions. Nor is this anything new. The Middle East has a bit of a similar problem since the Hagannah did its thing under ZD6 (British Cyprus) callsigns.

Who's picking on the language? Niger and Nigeria are two separate places,
one ex-French Colonial, the other ex-British. This was more for the
benefit of placing the country in Africa and setting the stage for what
was more than likely the picture: getting dinked by the locals in favor of
a well-financed DXpedition. There is a French word that describes the
situation accurately, 'naive'.

But just what in hell does it have to do with the price of borscht in
Bavaria anyway???

A little bit fuzzy on the ZD6 story, know that there are still bases
belonging to the UK on Cyprus. Must have been back in the days of
the Palestine Mandate.

Timnebo, who doesn't have a license (Amateur or otherwise) might
want to try to set up a Tango Alfa DX station in one of those
third world places! If you think Aaron is a trip, wait till
you have to deal with the Radio authorities in some other
countries!!! A person whom I knew tried to take his
moded Ranger to work 11 meter DX and it took some tall talking
by the diplomatic types to get him outta that one.
Lesson Learned-CB ain't appreciated and Ham Licenses will
at least open the door. Another lesson, when applying for an Amateur
Recip license, be friendly, have some cash and smooze with the
powers to be!!

Martin

Many years ago I was with a small auto insurer that about every three years had to fly into Dover, Delaware, take the commissioner to lunch, and assure him that DE was at the very top of our agenda and constantly in our thoughts and prayers. It was all bullshit and everyone knew it but when dealing with public officials some schmooz and a decent lunch never hurts. It helps if you can ask about his kids by name from the Farley file.

I would suspect that with most things the locals don't really grok, keep the country green - bring money is always a good motto.

I guess I should have done more homework, but it sounds like my 148 NW ST isn't quite the radio I thought it was. It seems to work well, but I get stepped on alot by bigger radios. My Wilson 1000 seems to have helped the transmission (about 5 miles on a non busy channel and about 2 on channel 19 (in Dallas). Oh well I'm pretty new to all of this any suggestions?

Dick, I had the opportunity to test some gear for radiated immunity. I was running 3 volts per meter (not a whale of a lot at VHF - heck, cell phones can nail you with 60 volts per meter in the noggin) when at around 219 MHz, the picture on the monitor began to tear. The test was in an anechoic chamber, 3 volts per meter, 30% modulated AM. I stopped the test at the problem frequency to observe and try a different monitor (the monitor was NOT part of the equipment being tested but was hooked to that equipment). Before I killed the generator, the monitor died. Completely. We had to get a new monitor. Some of this electronic gear is not very immune to RF. It can be a crapshot.

OK, Captain Sea Biscuit, lets see how far you transmit on channel
19 during the day right now at the second peak of this solar cycle.

This must be done barefoot, with any antenna you choose, loaded,
helical or 1/4 wave whip, and any legal CB radio. Report back
to us tomorrow with the results of your findings.

Yes, but why are they so fascinated with making amplified computer
speakers' lead-in cables so perfectly resonant on 2m?

I'd swear my Altec-Lansing speakers pull in more RF than my HT does.

Sadly true, Leland. I'm really not sure what the allure of FM on
11-meters is? I listen in every once and a while and am just happy to
hear that they are a well mannered lot. I suppose I don't hear their
adjacent channel interference as much because of the Channel Guard ACR
filter I have installed in my rig. Take care now, Leland.

While I agree that that sentiment exists, it's a weak argument against
the creation of a shared 11-meter allocation. 11-meters has already
developed into "hobby" radio. We may not like that, but that too is
the way it is. The legal 40's a zoo and the "freeband" has become a
de-facto pseudo-DX band. Sooner of later, we'll need to get over it
and try to do something constructive. The answer lays somewhere in the
middle. Create a shared allocation where licensed amateurs can help
the 27 MHz folks learn fow to work DX on HF properly. BRING BACK
LICENSING!!! Barring the removal of the ITU code requirement in 2003,
require a written CW test. (We've discussed this before.) And yes,
PROHIBIT 3rd party traffic. DONE DEAL!!! There's the vision Dick, <Mc
Collum> if you're reading this. Then you gain an ally in the battle
against the real lids, "Kilowatt Charlie" and such. And NOW you're
recruiting on a grander scscale. Just MHO. :-)

> I can tell you from
> attending the FCC's

> export radios, etc.) is not helping

> CB Radio's efforts to obtain more privileges.

I agree, Jerry...but where the heck has the FCC been? Not happy that the so-called "freeband" has become a hobby radio service, then please do something about it. I read (& listen) to the RAIN reports and it's few and far between that you'll actually see someone (Especially a non-ham!) busted for freebanding if it doesn't involve some other, more egregious, offense. I've said it before and I'll say it again. The guy running a clean 25 watts P.E.P. on ch. 38 LSB and working DX doesn't concern me one bit...and he's likely a future ham. The guys on the "freeband" don't even really bug me. (You pays your money & you takes your chances.) The do-do's running hundreds and thousands of dirty watts, using profanity, and PARTICULARLY those who venture onto the 10 & 12-meter bands without the appropriate license draw my ire. I'll drop a dime (Yeah, I know I just dated myself again.) to Uncle Charlie in a heartbeat wrt those activities. Like I said though, even if the FCC slowly grinds away the reversal of 11-meter as a hobby band in long past the point of no return. It can be used to advantage though. I'd hate to see false pride stand in the way of that. If we do nothing, my grandchildren's generation will still know 11-meters as a DX band. Plain and simple.

> Unfortunately, it's not the
> "good" operators that

> Image is everything no matter what endeavor it is. Until that changes, CB
> radio will remain exactly where it is--lost in the 50s from whence it came.

Agreed.

> Or it may be "sunsetted" and/or moved up
> into bands where the 155 mile limit won't even apply.

I rarely say never, but this is about as close as I'll come. Even if we were able to "eradicate" 11-meter ops in the US, it's international following would still be too great. I've been fortunate enough to be able to travel pretty extensively. Every country I've gone to, I've always inquired about the state of 11-meters and particularly it's relationship with AR in that region. I've found that despite written regs to the contrary, the "practical" approach toward 11-meters has often differed. (England being the exception and South America exhibiting the most most amicable co-existence.)

> Everything changes over the years. How CB changes will be up to the
> operators themselves
> insofar as becoming more than it is right now.

Try www.sugardelta.com or www.alfatango.org for an example of how 11-meters has changed over the years. I don't remember but a few CB

groups in the early 80's, now there are over several hundred.
Remember, I'm not saying that this is what it was meant to be. But
this is what it's become, like it or not. We can "realistically" deal
with it or we can count on the FCC's grinding along. My bet's
11-meters will grow faster than those wheels grind. Again just
MHO...actually I take that back. It's based on over twenty years of
observation.

That I think really sums up the difference between Ham and CB for the most part. Hams know what their various modes of transmission require and try to keep from interfering with others on the band. CBers (some) on the other hand, as you pointed out, are out for themselves, screw the other operators on the band, OR are just technical too incompetent to understand what they are doing. Either point is reason enough to justify that they stick with the radios the FCC has approved for use on the 11m CB band, which will reduce the interference they cause to others by their inconsiderate operating practices.

The more I hear about crap like the above the more I really suspect that the FCC will sooner or later take the cheap route to cleaning up the mess on 11m by just pulling the plug on it for unlicensed use by the public, and use it as a dumping ground for emissions from industrial equipment etc. The later would discourage any die-hard illegals from sticking around and still trying to use the band.

You need to think a bit beyond the idea "that they are a well mannered lot".
Particularly when you consider the effect of running a wide bandwidth mode
like FM in the middle of an AM band. I fail to see what is so "well
mannered" when they don't consider the effect they have on on-channel
communications, and the adjacent channels as well. In my book that is just
plain rude and irresponsible behavior.

I have the tapes and software. I did start several times with the tapes, however I never really seem to have the time to stick with it for long. For example I've been out doing field service work for the company for the past few weeks. That's why I haven't been posting to the news group much. Just haven't been home. I have made some inquires in to some of the local radio clubs a while back to see if any of them had any sit down CW classes I could attend as well. I would like to up grade sooner or later just for the heck of it, but I'll still stick with V/UHF because it is fun. The written exams are not problem. I just need to stick with the CW tapes etc. long enough to pick it up good enough to pass the test.

The answer to most of your post is (pausing while I open the envelope
and the drums roll)
they don't CARE. If it took up the entire 40 channels and then some, the
only letter in the
alphabet is *I*.
Jerry
  --
You're painting with a wide-assed brush, Jerry. I can say the only
reason you're here is to bitch about cbers, but that wouldn't make it
any more true now would it? But when you reply to a troll that starts
his post with "How clueless cbers are", and then further it, it gives me
pause to take anymore advice from you concerning anything radio-wise.
Through experience on the board, I have learned there is very good
reason not to trust certain hammies with a hardon for cbers, no matter
what kind of knowledge they have. Are you one of those now, Jerry?
Lately you have been getting your digs in whenever you can about cb.
Maybe I misjudged you.
Considering I had plenty of email exchanges about harmful harmonics with
you, and I thanked you for the information and the info links you
pointed me to concerning certain freqs above and below the cb band, your
statement about "me me me me me" applies to the nocode presence and
agenda much more aptly than your tired old stereotype that you seem to
be interested in setting forth lately cocerning cbers. You have somewhat
managed to maintain a sense of partiality in the past, why are you now
drawing lines in the sand? Look closely at some of your past posts where
you make unsavory comments concerning cb or cbers and you willl find a
nocode ALWAYS present in your thread. They seem to have one hell of an
effect on your mood of the day, Jerry. Maybe you need to get out more.

you need to buy a linear for your radio right away. and get yourself a
steel 9 foot whip. then youll be heard better.
-
BWAHAHAHAHAHA, that is the most stupidest advice I have ever heard.
First off, get rid of the radio. Soundtrackers suck and you got the
proof. Get you a real decent old Cobra. Then, you'll be talking.
-
Please explain how the soundtracker prevents his transmission from being
heard. Yea, we know they suck as a feature, but tell me how it affects
transmit. Secondly, a linear will indeed do exactly what he is looking
for, as will an improved antenna. That is all he asked.

hi dick, the country is Niger hence the citizens being Nigerian. are you saying that they cant call themselfs Nigerians like they always have because your now saying its wrong due to the fact that people from Nigeria also call themselfs Nigerians? if so please tell me what they should call themselfs. the dx'er who traveled there is a french citizen and is well aware of the history and geography of the location. either way i guess it doesnt matter. his activation was a huge success on 11 meters and for the italian hams, well what goes around comes around. heres the original for you to read dick, i'd hate for his poor translation into his third language to hinder your comprehension.

En octobre dernier, j'ai decidï¿½ d'aller en 5U pour me depayser et voir ce que l'Afrique pouvait m'apporter. Comme cela se fait souvent en Afrique j'ai demandï¿½
un indicatif radioamateur, 5U0T.

Pas de reponse alors j'y suis allï¿½ quand meme ....

Arrivï¿½ au ministere de la communication a Niamey, j'ai rencontrï¿½ la personne qui
donne les indicatifs radioamateur et m'a signalï¿½ qu'il fallait simplement refaire une demande et que cela ne poserais pas de probleme parcequ'il n'avait jamais recu le fax, hmmm

Les jours passent et toujours pas de reponse, le reponsable est malade, il n'est
pas dans son bureau etc...

Quelques jours passent et visite de la police, quelqu'un nous avait denoncï¿½. Mais qui alors ?

Mais c'est bien sur , un team Italien qui part en fevrier 2002 !

Un icom 706 et quelques dipoles pouvait faire de l'ombre a ce team mangeur de dollars ......

Voici juste un mail pour que vous sachiez que I2YSB IK2DIA I2UIY IK2WXV I1HJT et
IZ5BRW ont fait appeler par des connaissances Nigerienne la police juste pour quoi au juste ? HAM SPIRIT ??

Au fait le comble, il ont obtenu 5U0T? amusant non ?

Yup, here you are once again serving as the bright shinning star of an example of a typical CBer Twisted. You don't by any chance have a tiny clue about the issues of mixing FM transmission in very close proximity with others running AM do you? Do you have any idea how to figure out the bandwidth requirements, i.e. channel spacing, for a given FM deviation ratio? I thought not. You told me you're lucky to know how a soldering iron works to stick a mic plug on the end of a cable.

Get a life Twisted, and when you get a clue about the technical ramifications of the above issues maybe you'll make some sense the next time you make a post in reply to mine instead of your more typical twisted quotes, half truths, and personal attacks I see all to frequently in your writing. A perfect example of the above is your quoted comment.

Actually Leland, I really don't have to think beyond that idea. That I observed their "audible" operating mannerisms and found them to be a "well mannered lot," in no way diminishes the fact that they ARE INDEED being rude and irresponsible from an ACI aspect. (Actually sounds almost like a local "bandplan" agreement?) I guess I should've made myself a bit clearer, sorry. :-)

BTW, I passed on the Ten-Tec 6N2 rig. I decided to grab a DSP-599zx instead. I'll forgo 6-meters for now and stick with a President Lincoln/transverter combo for 2-meter SSB. If I could have any rig right now, it'd be the new Icom 756PRO II. (I'd even pick up 6-meters as a freebie with this rig.) Again, take care Leland.

It's also a know fact that kids tend to learn code much faster than adults do. I also understand that if one has some musical ability that appears to help a great deal too. Would you by any chance play an instrument of some kind? I'm not musically inclined myself, and I don't pick up foreign languages worth a darn either, and that was as a kid when they taught Spanish in grade school.

I have to get myself motivated, set aside some time to study and stay focus to learn it. The monitoring part should be easy to do since I have a rig in the van, and I spend about 30 to 40 minutes each way several times a week going to the gym for a work out. All I have to do is find some slow code to try and copy on one of the CW bands segments.

Check out the ones that Radio Shack sells if you live in the US. The
smallest one they sell is about 2 inches square and sells for around $15. It
comes with a cord terminated in a mini phone plug which should plug in to
the audio out jack found on many radios.

-
It's the same warped rhetoric and twisted logic these angry few use to
subscribe to the theory that operating 100 watts on 27.405 or 27.555
will bleed or cause more problems than using it above 28.

Do a lot of traveling. Car, no truck. Try to keep up with what is going on on the road with a hand held cb, given to me as a gift. Don't seem to pick up much though, don't know if it is lack of range or what. If someone is close by I can hear with no problem. Question is, what is a good cb for novice on the road traveler that can pickup good distance's and not just a mile or so? Or can a booster be added to mine?

Do you own the company?

If the answer is no, you are stealing from the rightful owners.

If the answer is yes, will the profits from sale of the items go into your pocket or onto the company's books? Unless it's a sole proprietorship you have a responsibility to your partners to play square.

>aaron i read lot of your posts but this is the first one directed

http://www.wolfleap.com/

This enterprising company sells the "Cherokee 'CM-10 Plus' AM CB radio" which boasts "10 bands of 40 channels" for a total coverage of "400 channels".

This company further says it offers the CB'er "Complete access to *ALL* CB channels".

Do the math: 10 bands x 40 channels each, (the legal 40 covers 26.965 to 27.405) that's....uh...wow, I didn't know 10 and 12 meters was part of CB now!

You know, a lot of these radio programs, LIKE ART BELL, are available on the INTERNET to listen to, just like the way the BBC is available to ME and I watch BBC News every day.

Since you seem to be saying this newsgroup should only have messages relevant to worldwide scanning, should there be no discussion of, say, frequncies in California or Melbourne?

HOW TO TURN SIX DOLLARS INTO SIX THOUSAND
DOLLARS:==: READING THIS COULD
CHANGE
YOUR LIFE! IT DOES WORK!==: I found
this on a bulletin board and decided to try it. A little while back, I was
browsing through newsgroups, just like you are now,: and came across an
article similar to this that said you could make thousands of dollars within
weeks with only an initial investment: of $6.00! : So I thought, "Yeah
right,
this must be a scam", but like most of us, I was curious, so I kept reading.
==: Anyway, it said that you send
$1.00 to each of the 6 names and address stated in the article. You then
place your own name and: address in the bottom of the list at #6, and post
the article in at least 200 newsgroups. (There are thousands) No catch, that
was it.: So after thinking it over, and talking to a few people first, I
thought about trying it. I figured: "what have I got to lose except 6:
stamps
and $6.00, right?" Then I invested the measly $6.00. Well GUESS WHAT!?...
==: Within 7 days, I started getting
money in the mail! I was shocked! I figured it would end soon, but the money
just kept coming in.: In my first week, I made about $25.00. By the end of
the second week I had made a total of over $1,000.00! In the third week I:
had over $10,000.00 and it's still growing. This is now my fourth week and I
have made a total of just over $42,000.00 and it's still: coming in rapidly.
It's certainly worth $6.00, and 6 stamps, I have spent more than that on the
lottery!! Let me tell you how this: works and most importantly, WHY it
works... Also, make sure you print a copy of this article NOW, so you can
get
the: information off of it as you need it.
==: I promise you that if you follow
the directions exactly, that you will start making more money than you
thought possible by doing: something so
easy!==: Suggestion: Read this
entire
message carefully! (print it out or download it.) Follow the simple
directions and watch the money: come in!
==: It's easy. It's legal. And, your
investment is only $6.00 (Plus
postage)==: IMPORTANT: This is not a
rip-off; it is not indecent; it is not illegal; and it is 99% no risk - it
really works!==: If all of the
following instructions are adhered to, you will receive extraordinary
dividends.==: PLEASE NOTE: : Please
follow these directions EXACTLY, and $50,000 or more can be yours in 20 to

60
days. This program remains successful: because of the honesty and integrity
of the participants. Please continue its success by carefully adhering to
the
instructions. ==: You will now
become
part of the Mail Order business. In this business your product is not solid
and tangible, it's a service. You are: in the business of developing Mailing
Lists. Many large corporations are happy to pay big bucks for quality lists.
However, the: money made from the mailing lists is secondary to the income
which is made from people like you and me asking to be included in: that
list.==: Here are the 4 easy steps
to
success:==: STEP 1: Get 6 separate
pieces of paper and write the following on each piece of paper "PLEASE PUT
ME
ON YOUR: MAILING LIST." Now get 6 US $1.00 bills and place ONE inside EACH
of
the 6 pieces of paper so the bill will not be seen: through the envelope (to
prevent thievery). Next, place one paper in each of the 6 envelopes and seal
them. You should now have: 6 sealed envelopes, each with a piece of paper
stating the above phrase, your name and address, and a $1.00 bill. What you
are: doing is creating a service. THIS IS ABSOLUTELY LEGAL! You are
requesting a legitimate service and you are paying for it!: Like most of us
I
was a little skeptical and a little worried about the legal aspects of it
all. So I checked it out with the U.S. Post: Office (1-800-725-2161) and
they
confirmed that it is indeed legal. Mail the 6 envelopes to the following
addresses: ==:
: #1) M Keller: 525 W. Main St: Arcade, N.Y. 14009
: #2) Chris B: 21784 Pleasant: Eastpointe, MI 48021
: #3) Scott Henrick: 920 Wessom Dr.: Casselberry, FL 32707
: #4) Gary Chimrei: 41 Gerald Ave. : Freeport, NY 11520
: #5) J. Sims: 327 Wanda St.: Luling, La. 70070
: #6) M.M.Gregorich : V.Draga 89h : SI-5293 V.Draga :SLOVENIA / EU
==
: STEP 2: Now take the #1 name off the list that you see above, move the
other names up (6 becomes 5, 5 becomes 4, etc...) and: add YOUR Name as
number 6 on the list.==: STEP 3:
Change anything you need to, but try to keep this article as close to
original as possible. Now, post your amended article: to at least 200
newsgroups. (I think there are close to 24,000 groups) All you need is 200,
but remember, the more you post, the: more money you make! You won't get
very
much unless you post like crazy.
:)==: This is perfectly legal! If
you
have any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal lottery
laws.: Keep a copy of these steps for yourself and, whenever you need money,

you can use it again, and again.==:
PLEASE REMEMBER that this program remains successful because of the honesty
and integrity of the participants and by their: carefully adhering to the
directions. Look at it this way. If you are of integrity, the program will
continue and the money that so: many others have received will come your
way.==: NOTE: You may want to retain
every name and address sent to you, either on a computer or hard copy and
keep the notes people: send you. This VERIFIES that you are truly providing
a
service. (Also, it might be a good idea to wrap the $1 bill in dark paper
to:
reduce the risk of mail theft.)==:
So, as each post is downloaded and the directions carefully followed, six
members will be reimbursed for their participation as a: List Developer with
one dollar each. Your name will move up the list geometrically so that when
your name reaches the #1: position you will be receiving thousands of
dollars
in CASH!!! What an opportunity for only $6.00 ($1.00 for each of the first
six: people listed above) Send it now, add your own name to the list and
you're in business!==: ---DIRECTIONS
----- FOR HOW TO POST TO NEWSGROUPS------------
==: Step 1) You do not need to
re-type this entire letter to do your own : posting. Simply put your cursor
at the beginning of this letter and : drag your cursor to the bottom of this
document, and select 'copy' : from the edit menu. This will copy the entire
letter into the : computer's memory.: Step 2) Open a blank 'notepad' file
and
place your cursor at the top : of the blank page. From the 'edit' menu
select
'paste'. This will : paste a copy of the letter into notepad so that you can
add your name : to the list. Step 3) Save your new notepad file as a .txt
file. If : you want to do your postings in different settings, you'll always
: have this file to go back to. : Step 4) Use Netscape or Internet explorer
and try searching for : various newsgroups (on-line forums, message boards,
chat sites, : discussions.): Step 5) Visit these message boards and post
this
article as a new : message by highlighting the text of this letter and
selecting paste : from the edit menu. Fill in the Subject, this will be the
header that : everyone sees as they scroll through the list of postings in a
: particular group, click the post message button. You're done with : your
first one! Congratulations...THAT'S IT! All you have to do is : jump to
different newsgroups and post away, after you get the hang of : it, it will
take about 30 seconds for each newsgroup! **REMEMBER, THE : MORE NEWSGROUPS
YOU POST IN, THE MORE MONEY YOU WILL MAKE! BUT :: YOU HAVE TO POST A MINIMUM
OF 200** That's it! You will begin receiving : money from around the world
within days! You may eventually want to : rent a P.O.Box due to the large
amount of mail you will receive. If : you wish to stay anonymous, you can
invent a name to use, as long as : the postman will deliver it. **JUST MAKE
SURE ALL THE ADDRESSES ARE : CORRECT.**
==: Now, : each of the 5 persons who

just sent me $1.00 make the MINIMUM 200 : postings, each with my name at #5
and only 5 persons respond to each : of the original 5, that is another
$25.00 for me, now those 25 each : make 200 MINIMUM posts with my name at #4
and only 5 replies each, I : will bring in an additional $125.00! Now, those
125 persons turn : around and post the MINIMUM 200 with my name at #3 and
only receive 5 : replies each, I will make an additional $625.00! OK, now
here is the : fun part, each of those 625 persons post a MINIMUM 200 letters
with : my name at #2 and they each only receive 5 replies, that just made me
: $3,125.00!!! Those 3,125 persons will all deliver this message to 200 :
newsgroups with my name at #1 and if still 5 persons per 200 : newsgroups
react I will receive $15,625,00! With an original : investment of only
$6.00!
AMAZING! When your name is no longer on the : list, you just take the latest
posting in the newsgroups, and send : out another $6.00 to names on the
list,
putting your name at number 6 : again. And start posting again. The thing to
remember is: do you : realize that thousands of people all over the world
are
joining the : internet and reading these articles everyday?, JUST LIKE YOU
are : now!! So, can you afford $6.00 and see if it really works?? I think :
so... People have said, "what if the plan is played out and no : one sends
you the money? So what! What are the chances of that : happening when there
are tons of new honest users and new honest : people who are joining the
internet and newsgroups everyday and are : willing to give it a try?
Estimates are at 20,000 to 50,000 new : users, every day, with thousands of
those joining the actual : internet. Remember, play FAIRLY and HONESTLY and
this will really: work

Date: 2002-02-05 23:08:32 UTC
From: Shadowwalker <shadow_walker301@yahoo.com>
Message-ID: <cep06u8v4pbim8fbhik930snn1v4ao043l@4ax.com>
Source record: 114597

Hey guys ....got a 2950 here.....receives fine on FM, SSB, however there is very very little AM receive.....rf gain works fine on the working modes..a station usually giving me full meter comes in at maybe 3-4 "bars"...lower level stations arent heard at all. In trying to find the problem, I have replaced the HF amp(Q18 = 2sc1764 replaced with 2sc2999(nte107)).....also the front end protection diodes(replaced with 1N4148 500 ma) ...my question is two-fold...number 1....Could this be the AM detection diodes being faulty? And secondly, could the AM detectors be replaced with 1n6263's rated @15Ma? Any other thoughts on the possible problem? Thanks and 73'z from the Indiana cornfields, Shadowwalker
Always keep your ass down, and your head even lower. 73's, Shadowwalker

Todd Power supply

Charger/Power Supply uses switch-mode technology
to insure service free operation even when subjected to extremely
harsh conditions. The clean DC output operates radios and
televisions without causing annoying static or snow. Pumps, motors,
lights and fans operate perfectly for prolonged life. They feature
regulated converter/power supply, tight lineload regulation, two-step
voltage switch, current limiting, transient voltage protection and
short circuit/over-current protection. The TPS 45 maintains the
batteries, only putting into the battery what is required by load or
self-discharge, cutting back to
milliamps as the battery requires. Batteries are charged quickly and
efficiently
without over charging. include cooling fan

unit is in good shape. 100.00 shipped in the us. outside us email for
shipping Or TRADE for something WHAT DO YOU HAVE SITTING AROUND?

There must be a lot of spurious garbage causing your watt
meter to read big. Every radio I have ever heard with
"big swing" sounds like shit, and I either have to turn
the RF gain way down, or flip to sideband to use the
slow AGC decay, to understand it.

Well Maniac, it's difficult for me to comment as Cb'ing in this
country is pretty quite these days. As for keydowns, don't know of any
in the UK :-(

BTW diesel costs around five of your dollars a gallon over here, how
much is it a gallon in the USA and is it cheaper than gas?

Diesel and gasoline are essentially identical in price, at the moment here in Omaha about $1.10 a US gallon or 3.8 liters. Diesel ramps up and down depending on the demand for fuel oil a big deal in the East Coast and not a biggie most other places. Look up Charles I, might have been II, who created a 'wine gallon' in a pissing contest over liquor taxes with Parliament. The British wine gallon became the US standard because we were a nation of bootleggers at the time. George Washington had to supress a rebellion in Pennsylvania among those objecting to a whiskey excise.

Funny how history now and again bites one in the old arse.

Hello EC:

Why don't ya all slide on by, and we can pull a cork, shoot some skip, tell lies, shoot rabits, and discuss Welfare gettin tactics. I know Welfare Clare
over at the state buildin. She's married to me brother Mojave Desert Don.

I ain't never seen no antenna "leaning up in the air"

Yep it sure does, we don't like to brag none, but being at the top of the hill, we is the highest folk here!

We got all kinds of kids, and when its welfare ah gettin time we round up all the kids in the tarilor park. Tell em all how to act, and get em ice cream after wards.

Got this fine 80 foot tower, big ol Linear Amlifier, Its called ah Henery. A 66 Ford F250 4 x 4, with a big ol honkin Fuel Injected 460, with a Hollie Carb, Duelies tires and read end, duel whips, Fox tails on the car radio antenna, and biggest loudest Public Address "Assum the Position Slime Ball" you have ever heard!!!! The kids like to talk into it.

My Welfare Linear Amplifier in the Welfare Truck got a couple of big Welfare Alternators, ah runnin the 32 pill Welfare Linear Amplifier.

EC maybe you need to slide on by, we will gas up the 64 Buick and go shootin rabits up on Gobblers Knob, and hook up the big ground plane antenna and shoot skip all day long. Got a few of the boys in Texas that would love talkin too ya!

After words we can drop on in to the "Dew Drop Inn" they cash the Welfare Checks no problem-Oh, and even will get ya a traveling beer or 2. They got a old tube Juke Box that I know must have paid for a few new freeways out here in the Mojave Desert, from all that Welfare money I put in em.

Don't be missing no days at work now EC, Sharing is ah good thing ah? I am ah thinking I gonna need a big raise here real soon.

Jay in the Mojave

Never mind that, just be glad someone left your reply in their post.

> > I feel honored

Don't, coz you're not... it didn't take long.

> > If you like Ill email you the name and password so you too can
> > use it.

What, so you can then blame me for all the trash on this newsgroup... no
thanks. Anyway, could I use a US dial-up without getting a hefty bill from
my UK telephone company?

The system may be different in the US, but over here the "unmetered" ISPs
often use telephone caller id to ensure that people do not group together to
buy one dial-up account and each use it from their home, work, etc.
AOL only provide unmetered accounts (using NSOL brand for PaYG).

So if anyone can use the "unmetered" account from any 'phone line, AOL must
be losing out from those that "share" an account.

But even so... who pays a monthly fee to AOL or the likes, just to make a
"public" account and at the risk of being booted off without a refund if one
of the anon. users breaks the terms? I can understand if it is a PaYG
connection, the account is free and you can even give a false address
to most ISPs.

But it seems that you are suggesting that you ("ToolTime"
<middlefinger4@home.comspam>) are several people who share the same goal,
the same attitude, the same writing style, and the same spelling mistakes.
One name... several separate people. Now, who's website did I see that same
theory on? I remember it began with a "V".

Please note that you are blocked, and don't expect "Mr Hand" to "give you a
hand", he is now blocked because of the language content of his posts.
But, I suppose you will find a way round it... you alway do.

Brainbuster.

Hi SSB

I think he is trying to prove that Amateurs are responsible people
who will stop at nothing to cure a problem.

But I have a question...

<quote>
The neighbor's touch lamp seems especially susceptible
to RFI and even flickers when he keys his 100-W
mobile transmitter while driving by her house
</quote>

Did he consider not using the linear while passing her house... or
would that be just a bit too much effort?

Oh, and another thing...
<quote>
Illegal CBers would never come forward to take
responsibility, much less identify themselves.
</quote>

Does using a false name count as identifying yourself? (Google
and other searches for "Voobner" reveal a big fat zero)
How about using multiple identities and, when called by your first name,
saying "who is George?".

Oh yes, the "anti" chaps are certainly proud of who they are... lmfao.

A CBers causes inteference and he is called a "keyclown", "criminal", even a
"faggot" (that's a ball of chopped liver)... But, a Ham (that's a cooked pig)
inteferes with equipment, and he's a saint.

Brainbuster.

> illegal.
==

Any AM / SSB CB radio is illegal in the UK... even posession is now enough.
They do allow the SSB 10 Metre radios that come in as "Amateur radio
equipment", but we know they are really aimed at.

==
> It was agreed that UK 27/81 spec was to be discontinued but with a large
> number of rigs sold over time, it was impossible to close the band down
> immediately.
==

The frequencies were NOT discontinued...
The "27/81" spec (MPT1320) was replaced with MPT1382 (PR27/94) on the
same frequencies. This spec was then updated in December 1997 to include
radios capable of covering both bands (40 UK + 40 EU).

http://www.radio.gov.uk/publication/ra_info/ra246/ra246.htm

If they wanted to "close the band", they would have stopped the manufacture
of equipment for the band, as they did with 934MHz which has now been
re-allocated.
I think some people still go up there, although it's now illegal.

==
> All I was suggesting was that 26Mhz to 28Mhz to be reserved for CB use
> for Universal standardization, so that rigs can be used world-wide. This
> will enable visitors to various countries will be able to use their CB
> rigs abroad (e.g. UK users in Europe and visitors to and from USA)
>
> This subject was only a mere suggestion.
==

A worldwide spec would be nice, but rather difficult to arrange.
We already have common frequencies in many countries, with just a difference
in mode. I would be all for the UK having SSB with the same 4 Watts and the
US being allowed FM... AND DX.

I am interested in REACT, but have had no luck contacting anyone. I sent two email 5 days ago and still nothing. Perhaps I am a litlle impatient. I aslo tryed to visit the local unit web site. Error 404. Tryed to look at the state wide calender of events and found that there is not one event of any kind on the thing for the entire state of Texas all the way through March. It is hard to beleive that there is not one meeting in four months statewide. How could they be very organized if they never meet. I am not trying to slash or bash. I am just a little frustrated with the work that it is taking to try to find out info.

Sign of the times, REACT has been replaced by the venerable cellular phone
the majority of the groups disappearing from the landscape. I recall back in
the seventies-eighties hundreds of active REACT groups many acting as
gathering place and a social organization for the Citizen Band Radio
Hobbyist besides providing much needed monitoring of channel nine.

I just recently bought a Craig L-232 ssb base rig in great shape. I
was wondering if anyone has any modification info for this radio?
Such as: 1) Clarifier mod? 2) Channel kit or adding a digital VFO?
3) Improved bandwidth filters?

Any information is greatly appreciated, or email me at
gametechNO@SPAMhushmail.com (remove NO SPAM from address)

Thanks,
Gametech

I haven't followed this NG for all that long. In fact, I still haven't figured out who all the combatants are yet. But I'm wondering how many are licensed hams? And is this what I can expect if I go to the local ham club as a CB'r and ask about joining?
Seems like I'd get hung at the door.
This NG is moderately entertaining, somewhat informative, but scary for those on the outside interested in radios.

I doubt you'll have a problem. They would rather have a legal Ham on the air
than a CBer illegally running power and transmitting out of band. Give it a
try. What you see here is by no means the general attitude you will see at
your local Ham Radio club meeting.

> Seems like I'd get hung at the door.

Here maybe. ;-)

> This NG is moderately entertaining, somewhat informative, but scary for

The wheels of government may turn very slowly, but they grind exceedingly fine too. Consider that there are now three services that the public can use for just about all of their personal and business communication needs - FRS - MURS and GMRS (for a small license fee). The bricks are in place Bert. All they have to do now is pull the regulatory switch to shut down 11m, and stop the importation and manufacture of 11m gear. I'm not saying that will happen, but look at the overall picture because it will not take much from the FCC to pull the plug.

>QRM you say? Do you think 11-meter ops have any experience in
> dealing with QRM, Leland?

Depends on what it is first. For example 13.56 MHz is an industrial frequency. The second harmonic would be 27.12 MHz, right in the middle of the legal 40 channels. That frequency, 13.56 MHz, buy the way is used by a sister company of ours that manufactures high frequency heating equipment for industrial use. Power levels of 5 -10 - 20 KW and up is small for heating equipment. They make much larger power equipment. Just imagine a band full of 5KW+ noise makers in most major cities around the country. Relaxing emission levels, and opening up 11m for other industrial equipment to dump their emission in to would be easy for the FCC to do. I think you get the idea.

No need to apologize Bert. I just wanted to point out that manners means
more, at least in my book, than how you treat the other operator you are in
communication. It also means being aware of how ones operations affect
others on the band as well since they have a right to be there too.

I've heard others making noise about getting a 756PRO II. At least with that
rig you'll have HF too. BTW are you planing to go to Dayton this year? I'm
going with at least 5 other Hams myself.

> without any real world experience other than two meters

If you look Tim channel spacing is 15 to 20 KHz using the normal 5KHz deviation. Checking any text, covering FM communication in detail, showing the sideband energy for different deviation ratios shows exactly what I mean Tim. The sideband energy is NOT confined to +/- 5KHz of the carrier frequency. That's one of the things that makes FM different than any AM mode. It would do you some good to go look first before making a hasty reply. They only way you can even think about less bandwidth is using a 2.5KHz deviation, which by the way is used on the FRS radios. Using a deviation of 2.5KHz you may be able to get away with a channel spacing of 10KHz, more like 12KHz would be expected. Most Ham gear is designed for 5KHz deviation by the way. Newer equipment has the option of using 2.5KHz. Even on the 10m Ham band FM is not permitted below 29MHz because of its bandwidth requirements, and to keep interference down to those using SSB on the lower end of the band.

Linetest,
I wouldn't worry about it all that much. As you said, find
out
'who's who' before drawing any conclusions. If you want to go to
a ham club meeting, go, no one will 'bite your head off' with out
provocation. Preconcieved ideas are ususally wrong, so it's best
to keep an open mind. An 'open mind' doesn't mean that
everything
that goes through it should come out of your mouth, though.
That's
called common sense...

"Compared to you, they are."

Yup, here you are once again serving as the bright shinning star of an example of a typical CBer Twisted. You don't by any chance have a tiny clue about the issues of mixing FM transmission in very close proximity with others running AM do you?

"Um, I don't "MIX" my transmissions on FM. Besides, you are back stepping, you came out with the spew about "cbers' , not cbers on FM. Your original sentence mentioned nothing about FM, just cbers. Don't try to clean it up now. Now, let's see if you can handle a conversation without getting too personal. If the equipment is the same (quality hammie rigs) how is the deviation increased on eleven meter as opposed to another?"

Do you have any idea how to figure out the bandwidth requirements, i.e. channel spacing, for a given FM deviation ratio? I thought not.

"Not thinking has always been your error."

You told me you're lucky to know how a soldering iron works to stick a mic plug on the end of a cable.

": a few years ago, yup. About the same time you said you were studying for your code test last summer and never followed through. As many say, it takes a few weeks....then an "NCI" sig appears after you sig last fall. You don't know what the heck you want, do you?"

Get a life Twisted, and when you get a clue about the technical ramifications of the above issues maybe you'll make some sense the next time you make a post in reply to mine instead of your more typical twisted quotes, half truths, and personal attacks I see all to frequently in your writing. A perfect example of the above is your quoted comment.

"I treat people in kind. You have secured the knowledge that you are not as capable as you try to come across. Increased deviaion of an FM signal on 27 as compared to "YOUR" hammie bands is just one of your more entertaining mistaken quotes."

- MURS and GMRS (for a small license fee). The bricks are in place Bert.

"So are the ruins from the Indians before the Spaniards arrived here.
That's all those bricks are, ruins from what used to be."

All they have to do now is pull the regulatory switch to shut down 11m,
and stop the importation and manufacture of 11m gear.

"Your wet dream."

I'm not saying that will happen, but look at the overall picture
because it will not take much from the FCC to pull the plug.

(Yawn)

-QRM you say? Do you think 11-meter ops have any experience in dealing
with QRM, Leland?

Depends on what it is first. For example 13.56 MHz is an industrial
frequency. The second harmonic would be 27.12 MHz, right in the middle
of the legal 40 channels. That frequency, 13.56 MHz, buy the way is used
by a sister company of ours that manufactures high frequency heating
equipment for industrial use.

"Let me get this straight. You work for a computer company that has a
"sister" company that manufactures heating equipment that uses 13.56
MHZ.....for what? Communications? I could have sworn the contract
on that frequency expired. When did the company you work for renew it?"

Power levels of 5 -10 - 20 KW and up is small for heating equipment.
They make much larger power equipment. Just imagine a band full of 5KW+
noise makers in most major cities around the country.

"Yes, your imagination is the only thing that you can argue. Always the
"what if" scenarios and always about some cber."

Relaxing emission levels, and opening up 11m for other industrial
equipment to dump their emission in to would be easy for the FCC to do.
I think you get the idea.

(Dripping with sarcasm) "Wouldn't be a problem even if they did. In that case it would probably get NO enforcement whatsoever and it would encourage those of us that don't run kilowatts to possibly start doing so to get over the drone of your super charged industrial dialysis machine."

qrm is nothing new to us freebanders. hell we're still in there late at night working weak signals with qrm into asia and the pacific region long after the hams have given up on 10 meters and moved on down to 20 or 40. hf amateurs dont know how to act if the signal is below s9 while on the other hand were used to talking thru people whistling, throwing carriers, and anything esle creative they can think of to cause some harm. if they dump all kinds of commercial emmisions on 27 megs then that'll be fine with me. i'll drop two megs and meet you on 25.580 :) or give me a call on 6.670 lsb

lelnad, i know you have no true experience on ten meters so i wouldnt expect
you to know what i was talking about but let me restate this. if there is
absolutely no problem with the ten meter repeaters bothering each other on
29.600 , 29.610, 29.620 and so on then why would the same fm signal from the
same radios automatically start causing problems when its 27.205, 27.215,
27.225 and so on versus the ten meter freq?. whats the difference?

A 100mw walkie-talkie in the bushes out front will drown out a KW+ station a fraction of a mile away. If you have your receiver filled with noise it does matter what the other guy is running. Nothing like getting some serious gain control pumping action going from a local noise source. It does wonders to kill the receive on a rig. If you can't hear'em you can't work'em Tim.

What is the physical spacing between the repeaters Tim? The current standard is about 100 miles for local COM's with machines on the same frequency. In very crowded areas its been as close as 80 miles. FM has exactly the same characteristic on 10m as it does on any other band, as far as bandwidth requirements goes, so your point about it being different is just non sense. Sure you can find repeaters nearly on the same frequency, if not the exact same frequency, but they are NOT close to each other. Further I have experienced interference from other repeaters that were within 10KHz to 15KHz from the one I was using. In fact there is one in Troy, few miles from me, that acts as a DX spotter, and another in Ann Arbor. When the Troy machine is active it kills the Ann Arbor machine at my QTH.

lelnad, physical spacing has nothing to do with it on hf when the repeaters are 60db over 9 here from all over the country, again this is not the case with your VHF/UHF repeaters your used to. i can have the 660 machine on the east coast booming in here super strong and never having a porblem listening to the machine on 650 or 670 at a much smaller signal. lelnad it was you not me that insinuated that fm was not usable at 10khz spacing when indeed it works very well daily for the amatuer community. as for your local machines that are causing troubles, maybe they use davemade gear? haha

Other than your not fitting into the flow of things what you are likely to get is a quick and probably dirty evaluation. Are you a tyro or a knuckledragger? Fixable ignorance or permanent stupidity. Put yourself in their shoes given what you have seen on CB and you will be close to right.

In the interim, might I suggest three websites:

http://www.arrl.org the national amateur organization for all sorts of wonderment including the question pool for the exams.

http://www.qrz.com for some good sample exams.

http://ah0a.org for Morse Academy a computer based Morse tool. For privleges below 30 MHz Morse at 5wpm will be required for several years. Follow directions and you will have it nailed in a month or less. Comes out of the box at exam speed.

As one of the few here that use their name and callsign regularly, feel free to use my e-mail. For what it's worth I was first licensed in 1955; you will find that in radio clubs like churches there ain't no proscelyte like a recent convert, no temperance leader like a reformed drunk, and no more anti-CBer than one just out of it. Us older guys are more mellow about things.

As a CB'r who is taking my test this weekend, I will say that my contact with the various clubs in the area, as well as in my travels have always been plesent, there are ummm jerks out there yes, but then there are jerks in any organization, don't judge a group of people by a few people.

There are several Hams in this group that have offered me some excellent advice, and have never insulted my intelligence for asking questions, yet some of the CB'rs in here have insulted me for reasons I haven't discovered. I do not judge the CB group by these people. Everyone is entitled to their opinion, we have the freedom of choice, and of belief.

Do a search for local clubs on the ARRL site, many times therre will be several clubs in an area, contact them and see which one you like more.

Keith

Source record: 114760

Maybe I do indeed.

What I think has me taking cheap shots is the 10 meter thing. I won't mince words when I
express my anger at this. Perhaps, it has "leaked" over where it shouldn't be. Those truckers
and the sellers of the equipment have me really pissed. I don't have a problem with what the
loud crowd does down on 27 MHZ. But when they start going down below channel 1 where they can interfere with me, and up into the 10 meter band where they have no business as well,
then it is a different thing. Again, I don't think it is my place to "police" CB--as long as it stays
where it is supposed to be. When they tread where they have no right to be, interfering and taking frequencies for their own use that I WORKED for the privilege to use, THEN all bets
are off, and I will document, report, and yell to RH to DO something about it. Whatever it takes to protect the spectrum that I am licensed for, I WILL do. The "loud crowd" can do whatever they like between channels 1 & 40--even above. But when they creep on over the
28 MHZ line, then I will DF, stalk, take tag numbers--whatever it takes--to stop it. That position has never changed. I will help anybody I can with their problems--as long as it is legal.
For example, you never see me answering amp questions, or export radio questions; that's not
too good cuz it could result in my attracting attention from RH I don't want.

The answer to most of your post is (pausing while I open the envelope
and the drums roll)
they don't CARE. If it took up the entire 40 channels and then some, the only letter in the
alphabet is *I*.
Jerry
--
You're painting with a wide-assed brush, Jerry. I can say the only reason you're here is to bitch about cbers, but that wouldn't make it any more true now would it? But when you reply to a troll that starts

his post with "How clueless cbers are", and then further it, it gives me pause to take anymore advice from you concerning anything radio-wise. Through experience on the board, I have learned there is very good reason not to trust certain hammies with a hardon for cbers, no matter what kind of knowledge they have. Are you one of those now, Jerry? Lately you have been getting your digs in whenever you can about cb. Maybe I misjudged you.
Considering I had plenty of email exchanges about harmful harmonics with you, and I thanked you for the information and the info links you pointed me to concerning certain freqs above and below the cb band, your statement about "me me me me me" applies to the nocode presence and agenda much more aptly than your tired old stereotype that you seem to be interested in setting forth lately cocerning cbers. You have somewhat managed to maintain a sense of partiality in the past, why are you now drawing lines in the sand? Look closely at some of your past posts where you make unsavory comments concerning cb or cbers and you willl find a nocode ALWAYS present in your thread. They seem to have one hell of an effect on your mood of the day, Jerry. Maybe you need to get out more.

If you can't learn how to read the subject header Twisted you're beyond
help. Looks to me like I have to explaine everything to you in detail like I
would some baby kid.

>If the equipment is the same (quality
>hammie rigs) how is the deviation increased on eleven meter as opposed
>to another?"

Quiz time ha? Well do you know what the difference is between "deviation"
and
"deviation ratio"? Once you get a handle on that you just may have some idea
about the subject being discussed here.

+Do you have any idea how to figure out the bandwidth requirements, i.e.
+channel spacing, for a given FM deviation ratio? I thought not.

>"Not thinking has always been your error."

Nice way to dodge the question Twisted, but its still apparent you can't
answer it. It also amply demonstrates you don't have enough technical back
ground to debate the subject either. So I'm not going to waste the time
doing so with you. Otherwise the answer is rather short and easy to
explain.

+You told me you're lucky to know how a soldering iron works to stick a
+mic plug on the end of a cable.

>": a few years ago, yup.

Took you that long to master it? Oops, my mistake, you still haven't.

>"I treat people in kind.

This is really going to get the group rolling on the floor laughing out
loud Twisted!

> You have secured the knowledge that you are not
>as capable as you try to come across. Increased deviaion of an FM signal
>on 27 as compared to "YOUR" hammie bands is just one of your more

>entertaining mistaken quotes."

What a hoot Twisted. You can't even get your word usage right. "Quote"? Who the heck did I "quote". What a looser you are Twisted. The only time people want to talk to you is when they need something to laugh at like now. 8-)) Or some of your more famous rants below.

Oh - Here is what one of your compatriots had to say the last time you tried pulling this crap of yours too.

--
Proziac to Twistedhed:
Twistie, Is Leland Talking to you?
I don't think he is so why don't you put it wide to the side and take a stand by or your
gums still a flappin. And you guys want to blame doug, or frank or who ever for posting bullshit posts when again You do the exact same thing but worse. Nothing cb or help related just a sarcastic post. Talk about get a life! Since you don't understand anything about legal electronics or otherwise you attempt to discredit him.LOSER!

A fair sized industrial area full of equipment splatering across the band
works just as well Tim. 8-) Besides I'll bet they don't work ONLY other
mobile stations. It's the guys in big cites, and or operating fixed stations
that would have the most problem IF what I mention does come to pass. Like I
said before it is possible among other choices the FCC has.

> causing troubles, maybe they use davemade gear? haha

Like I asked Twisted I'll ask you. Do you know what deviation is being used? IF it is 2.5 KHz you may get away with 10 KHz channel spacing. Also like I said most Ham gear is set up for 5 KHz deviation, and on some rigs you have to select which one to use. I'll bet those guys running FM on the legal 40 here in the US don't have a clue what they're running, and if you have used FM did you know what you were running? Oh, I should also mention the filters may need to change too depending on which deviation is normally used. So far all you have told me is you have not personally experienced a problem, however you can't even answer the question above, which does make a difference.

Get a text book on FM communication Tim and read it. Once you have had a chance to understand the concepts, and look at the graphs relating sideband energy content v.s. deviation ratio for the different order sidebands, things will make more sense. Oh that is right, there is an infinite number of sidebands when using FM, unlike AM, and the energy content varies depending on their order too. I'll bet you didn't know that fact. You have to understand the theory behind FM and some of the basic math to get the point I'm making.

Just to make things more interesting did you know that using the right deviation and deviation ratio you can make the RF carrier completely disappear? Some Hams use that idea to check their equipment, to set the correct max deviation when an FM test set is not available. All they use is a SSB rig to monitor the carrier.

What's so all-fired wrong with hams defending their 10 meter turf from
unlicensed bootleggers? Oh I know. You're afraid if to many get
bagged, "freebanding" might get a bad reputation. Too late. The
popularity of your "hobby" is already being blamed for the 10 meter
incursions. More to come. Plenty more.

> how many of you are taping and reporting those ones that

Check the rain report, there's plenty of 75 meter ham ops being cited.

> Tim Nebo

You know, I hate to err on the side of bad taste, but as was pointed
out previously, your "sig" actually DOES look like two guys "doing it"
doggy style. Maybe you should think about changing it.

Yes, I can see how people with names like "IceCold", "Anthrax" and
"Twistedhed" might be scary to a newcomer, but rest assured, these
guys are mostly "hot air".

Don't be concerned about your reception at the local ham club unless
you walk in with an attitude. If you give your 'credentials' as
running a 3KW amp on CB, or operating a "10 meter radio" you might be
in for a very chilly response. Otherwise, expect to be warmly greeted
like any newcomer to any hobby.

Jerry what you don't take into account is that the "loud crowd's"
antics spill over into the communities that we all live in. It is
precisely because of hams saying "I don't care what CBers do" that ALL
radio hobbyists now have a very bad reputation with the general
public.

You have ham radio equipment, an antenna on the roof, and talk to
people around the world, and "Lug Nut" down the street does too. You
may make the distinction between Ham and CB, but to your nieghbors it
is all the same thing. Like it or not, YOU are getting lumped in with
the 10,000 watt CB idiot coming over the neighbors stereo who refuses
to take responsibility for where his RF goes.

HR2346 is another. And local antenna restrictions are another. Can you
blame communities for not being "ham friendly" when their residents
consumer electronics are splattered by foul-mouthed high-power outlaw
"radio operators"?

You need to look beyond 10 meter incursions to the bigger, underlying
problem.

You know as I thought about this statement on my drive home from the
really sophisticated thermal inducto place I work for I realized that I
made this statement without actually even experiencing the entire ham
radio world. I doubt I would have made this statement had I spent any
time actually listening to the mess that our beloved HF ham bands (which
I cant use yet) have become. Since I live in an apartment building I
really don't even know what's going on in the CB community much less the
ham radio world that I have no access to so most of what I speak is just
me repeating things I've heard here on usenet. Please excuse this
"parrot" behavior. It has just gotten a little boring kerchunking the
repeaters and none of the locals will talk to me about illegal amps
anymore so I have to do something to keep me from having to practice
that awful code!

It all depends. If you were on 40 meters, you might run into the chucklehead I did some 35 years ago. He built an amplifier from a kit. Left off the tube covers so the tubes would 'run cooler'. Also left the metal cover off the amp so it would 'run cooler'. The real culprit was the speaker leads which ran parallel to the offending dipole in the next yard. I didn't measure them, but they were quite long. About 25 or 30 feet long. Change your frequency and you'll find some other device which picks up the signal. On 40 meters, you probably wouldn't have a problem with your speakers; you might, however, have a problem with a neighbor's sound installation. BTW, I had a 900 MHz spread-spectrum cordless phone which interferred with the doorbell. Replacing it with a 2.4 GHz spred-spectrum cordless phone solved the problem. Doorbell. Go figure.

For right now that's true. Bignet is the service the company I work for uses
for Internet access. When my home cable modem service got switched from
MediaOne to comcast I lost the use of the MediaOne news server. I'm waiting
for comcast to get their act in gear and get their news server on line.

Aaron this is one point where I have to agree with you 100 percent. The
general public for the most part can't tell the difference between a Ham or
a CBer. Since there are so many CBers out there, number wise in relation to

Hams, the chances that one is causing problems in a neighborhood is far higher that for a Ham. Then considering the general attitude of the outlaw CBers you see posting in this news group, its not hard to figure out that Hams can get a bad rep from their operations.

What makes you so sure nothing has been done Tim? I sat in a forum, at the last Fort Wayne Ind. Hamfest, where Mr. RH form the FCC gave a speech about Ham Radio enforcement efforts. Believe me he had plenty of tapes to play, and he DID play some of them, for the assembled group of those guys you alluded too. Make no mistake about it they know what is going on, and yes things are being done too.

From: joxendi@bellsouth.net (Jerry Oxendine)
Maybe I do indeed.
What I think has me taking cheap shots is the 10 meter thing. I won't mince words when I
express my anger at this. Perhaps, it has "leaked" over where it shouldn't be. Those truckers
and the sellers of the equipment have me really pissed. I don't have a problem with what the
loud crowd does down on 27 MHZ. But when they start going down below channel 1 where they can interfere with me, and up into the 10 meter band where they have no business as well, then it is a different thing. Again, I don't think it is my place to "police" CB--as long as it stays where it is supposed to be. When they tread where they have no right to be, interfering and taking frequencies for their own use that I WORKED for the privilege to use, THEN all bets
are off, and I will document, report, and yell to RH to DO something about it. Whatever it takes to protect the spectrum that I am licensed for, I WILL do. The "loud crowd" can do whatever they like between channels 1 & 40--even above. But when they creep on over the 28 MHZ line, then I will DF, stalk, take tag numbers--whatever it takes--to stop it. That position has never changed. I will help anybody I can with their problems--as long as it is legal.
For example, you never see me answering amp questions, or export radio questions; that's not
too good cuz it could result in my attracting attention from RH I don't want.
73
Jerry
-
Well come on down and I'll take ya' fishin' and I'll even leave the export at home.
That was never a problem, Jerry. You may açtually be doing amateur radio ops a big favor. I certainly don''t blame you for defending your turf that you indeed are licensed for. Report, kick ass, take names, whatever..but your problem is with such a small minority of cbers yet you come across as if you are pissed at everyone who doesn't have a license. Most are considerate users on the freebands. As Tim claimed, we are DXing when 10 is all but dead and I can reiterate that the serious and avid freebander doesn't give a damn about 10 meters. As far as answering questions about amps or whatever, that certainly is your point of view to self-censor what you talk about, and I can respect that...but if Riley is going to bring around some heat simply because of usenet talk, you have way more problems than intruders on 10 meter, which by the way, appears to be almost always be oblivious truckers. Can you

imagine if all cbers took the same approach toward hammies that some of the overzealous nocodes among us take toward cb? Your ranks would probably die off and your frequencies would be sold, which is going to happen sooner or later anyway with the value of the spectrum going the way it is and people like the nad minded ego bruised and undereducated nocodes that frequent this forum that bring their ignorance to amateur radio.

I've got a unit I'm willing to part with...

Lafayette Telsat SSB-50
2 Channel SSB CB, original mike. Seems to be a fairly feature laden radio. Has item on the back which I am unfamiliar with... Has typical (antenna, PA, Ext Sp. Power) plus Switchable ground, Alarm wire??, REC Jack (Record?), and EX Jack. Also, an antenna tuner. Radio is a really good condition. Was functional when I purchased it. Will check again if you are interested...

Message-ID: <ac51f598.0202071123.70ec961d@posting.google.com>
Source record: 114819

Hi all,

I finally have my setup installed. Uniden Pro520XL with a Wilson 1000 Mag mount on top of my 1998 Suburban. I had to get a longer whip to improve the SWR. This is what I have for readings now:
Channel 1: 1.1 - 1.2
Channel 20: 1.5 - 1.6
Channel 40: 1.8 - 1.9

Is that acceptable? How can I get Channel 20 and 40 better without changing channel 1?
Any advice?

Thanks,

Joe

Richard, the "trophy" he is refering to is the "jock strap" he has hanging
on the wall.

Joe,
You can improve your SWR over the top end of the band, but
it'll
be at the expense of the SWR at the bottom end of the band. From
the information you gave, your antenna appears to be a bit too
long.
If you shorten it slightly, it should move the SWR 'dip' further
up the band to around ch-19, and the SWR at ch-1 and ch-40 should
be the same. Don't get to inthusiastic about cutting the whip!
It
shouldn't take much 'shortening' at all, so cut a little bit,
then
check the SWR. Repeat till the loswest SWR is around ch-19, then
quit.
Good luck...
'Doc

516. Touch control lamp "problem"

Newsgroup: rec.radio.cb
Date: 2002-02-07 22:06:52 UTC
From: Ace <nav297@ultrasw.com>
Message-ID: <3C62FA7C.DE6A4DB0@ultrasw.com>
Source record: 114827

Hi guys,

Please forgive me for opening up what is apparently an old subject, but I would really like to get my lamps NOT to come on by themselves.

My best guess as to the cause is the power company playing games. Very regularly, we can hear fans change speed and fluorescent lights change a couple times a day.

Would this type activity be causing my problem? If so, what are your suggestions to filter out whatever?

I guess the problem could be cell phones, (and yes there is a CB antennae about a block and a half down the street, but I don't know if it is active), or low flying military aircraft, or my next door neighbor who is a policeman and drives an unmarked car.

Really don't think it's radio interference because it's too "regular".

Currently have put about 5 turns of an extension cord through a ferrite ring and am plugging the control into this cord. Now wait until this evening to see what happens.

Would appreciate any and all help,
Ace

Source record: 114828

Ace,
Most 'touch control' lamps are better antennas than
they are lamps! They are affected by almost any half
way strong radio signal, and can be a real 'pain' to cure.
'Curing' the problem depends on the specific circuits
used in your lamp. Your best bet is to contact the
manufaturer, tell them the problem and ask for the specific
'fix' for your lamp. Just remember that your 'playing'
with AC line voltages and it WILL bite you if your not
careful. Good luck...

No service uses the freq. called free band, it is open that is why its
called free band. It is not legal to use them but lots of people do.

Input power in watts divided by the source voltage will give
the current requirement. However, for a amplifier, multiply the
current by at least a factor of two for a bare minimum supply.

-or-

Figure:
10 amps per MRF-455
15 amps per 2SC2290
20 amps per 2SC2879

Approximate but try Watts / 5. Give you a bit of a cushion. Say you have a 280 watt output at 14 volts which is 20 amps with about 50% efficiency makes 40 and you do have some peak loading and do not want the voltage to drop out of regulation so the cushion is worth it.

If you are planning to run the usual piece-of-crap mobile amp at home be prepared for a visitation of your neighbors carrying torches and nooses. You might also wish to be sure the antenna can take the heat or have a fire extinguisher handy.

Dick NBK

Not to flame, but most of the 'freeband' is assigned, although seldom used.

Good advice, Dick. Greg, you don't want to push your power supply for the same reason you don't want to run your car at full throttle all the time on a race track. Things get hot doing that, and heat is your worst enemy. You really want a good bit of headroom and I won't argue with Dick's numbers.

Say, Mr. Train... hasn't anyone tried to create an "on-line schematics exchange" for 10m linears? I am very grateful to have my copy of the last of the 800-900 MHz scanner converter schematics (just in case VoobnerMan shows up at my door in his cape & tights, me chums have *their* copies too, hee hee)... personally, I'd like nothing better than to have copies of radar-detector schematics---so I could travel to VA and plaster them on every phone pole I could find! Not many ops know that there's no law against handing out *schematics*.

BTW if Uncle Sam said "eh, heck with it, we don't care what people do with CB anymore", would Voobner get utterly depressed?

No flames taken, Jim. Most who've ever "freebanded" understood that it's a calculated risk. With all due respect, I don't think "freebanders" coined the term "freeband." Remember when those who operated from 27.4050 MHz through 27.9999 MHz were called the "HFers?"

Back then it was relatively expensive to get on the "freeband," which had the effect of limiting operations there to serious SSB ops who yearned to escape from the congestion of the "legal 40." (Yet weren't ready to jump to AR, although some pulled "double-duty.") There was an unwritten rule that was followed...never, NEVER, N E V E R venture onto the 10-meter band!

With the fairly recent advent of cheap "export" rigs being sold at truck stops, we now have AM transmissions in the 10-meter Novice sub-band which coincidentally happens to fall on or about ch. 19 "two-up." Now many veteran "freebanders" are escaping the "freeband," which is rapidly becoming like the "legal 40" of old, and seeking refuge...where? That's right, AR. Ain't life strange?

In the days when the FT-101E Yahoo was the thing to own, I got a lot of people thru the ham exams and that was when the General was 13wpm. In fact one guy is the reason I have an Extra. I taught the code at 16wpm and had one guy who happened to be laid off from driving a concrete truck go from nada to Advanced in 32 days. So more out of sheer ego than anything else I used my own methods to pass the 20, took about a month. By that time they no longer gave a neat cert for the Extra so it looked kind of tacky on the wall next to the First Phone. I ultimately added the Second Tel with aircraft telegraphy (equivalent to the First Tel but you didn't need to go to sea to qualify to take it). Took years for the FCC

to realize no aircraft used telegraphy any more before they flushed the endorsement.

But you are right, the SSB guys were first-rate ops while AMers were by and large scum. They were HFers all right but got a bit hacked when they found that the HF prefix is assigned to Poland. What I got a chuckle out of was that in St Louis at the time 27.455 was for code practice.

It was not all that unusual to be broken by renegade CBers up as high as 28.600 where one nite we were holding our Prevert Net -- leading the nation to greater heights of Preversion -- and a couple of guys from Arkansas one nite broke in so in my capacity as club pres I formally swore them in and assigned them WB5LID and WB5QLF after they made it pretty clear they had paid good money for the crystals and intended to use them. Neat ceremony for off-the-cuff if I do say so.

The export radios are queering the whole thing.

The best thing to do is NOT tell them you are a CB'er when you go
to the testing to avoid the confrontation that the CB'ers always get.
Save yourself a lot of aggrevation and long speeches from the
"old timers". Also, avoid making it
known once you get on the air that you are an ex CB'er and it
will save you a lot of headaches. It's a shame, but they will avoid
talking/responding to you even on 2/6meters. And, if they pick up
on you slipping up using a CB term they will be right on you too, and
quickly point out that "you're not on CB now boy" and watch for
you to slip up. The good news is, there are a lot of new hams who
are ex CB'ers and they are very friendly of course, and they will talk
to you. Good luck and enjoy the hobby.

>well i've never known stick figures to actually have a gender.

Actually, stick figures DO have a gender. International signage that has been in use for years around the world depicts the female figure either with longer hair or a bell shaped torso (i.e. a dress). Look at locker room or rest room doors. If the 'stick figures' on the signs had no gender there would be lots of confusion. Tim, what you have chosen to show represents two MEN.

>i guess you see them how you want them to be. we see what you

Just because you pretend it doesn't make it so. Spectrum charts
published by the FCC currently show government allocations and studio
remotes assigned in "the freeband". Those are the righful users, not
you.

Fantasizing again? Why not make it a reality? Why not lobby the FCC to formally withdraw ALL regulations? After all, in sheer numbers there are plenty of outlaw radio ops out there, far more of them than hams. Only thing is you could never get them organized. But don't feel too bad. Thieves, drug dealers and other criminals have the same problem.

1. Divide the rated output power by the applied voltage.
That gives total current required.
2. Most solid state amplifiers are about 50% efficient, so
divide total current by 50% (or multiply by 2).
3. Most power supplies are rated ICS so add about 15-20% to
the results of #2.
That's the minimum sized power supply for full output of the
amplifier.

I have a GE superbase which needs new clock switches. Someone tried to remove the case incorrectly, and mangled the switches underneath. They are the momentary switches on top of the case. Does anyone know if these parts are available through a parts distributor or if they are used on any other radio's. Someone told me that GE used them on certain alarm clocks but I can't seem to find out any information. Any help would be greatly appreciated. Thank you for your reply.

One thing to check is if you get fans changing speed or lights getting dimmer or brighter when a appliance stars up - such as air conditioning, furnace, heat pump, refrigerator/freezer etc.

Even a microwave can sometimes cause the voltage drop. I just had this problem fixed last week here at my house. It turned out to be a bad neutral connection at the pole pig.

> Would this type activity be causing my problem? If so, what are your
> suggestions to filter out whatever?

If it is a bad connection on your mains, no filters will fix the problem.

Quite true, Dick. I came in on the tail end of the FT-101xx era. The mid eighties were all about the FT-757GX, TS-140S, and the real "export" rigs that were dedicated 11-meter radios. What people call export rigs (At least the cheap AM ones.) now are just cheap AM rigs marketed as "10-meter amateur" rigs with multiple banks of 40 ch. "bands" that are enabled upon the relocation of a jumper. They come with all the trucker's delights, talk-balk, echo/reverb, and other associated "noise toys."

The old President Jackson, President Grant, Galaxy 2100, Galaxy II, and a few others were marketed and sold as 11-meter transceivers. No modifications necessary. The only annoying (IMHO) feature they came with was the ETS or roger beep, but that was usually switched. Then came the more serious 10-meter rigs. This included the Clear Channel AR-3500, the Uniden HR-2510, and later the RCI-2950. The AR-3500 was nothing short of a really great 10/11-meter rig. For the life of me, I don't know why they were discontinued? The Uniden-HR-2510 evolved into the President Lincoln which is another rock-solid radio. Keep in mind that these rigs didn't come with talk-back, echos/reverbs, and such...just AM/FM/SSB/CW with and exceptional receive section and a good clean signal. (Provided you didn't try to wrench every last watt outta the dual final setup.) I was never a big fan of the RCI-2950, which is kinda ridiculous since my first 11-meter rig (Which I remember quite fondly and with great sentiment.) was based on the same EPT3600xx board. Oh well!

Please excuse me for babbling on. I'm just kinda walking down memory lane and typing as I stroll. I'm putting together a display case of the most of the radios that led me to amateur radio. While I do have a

100mW h/t with CW, I haven't found the G.E. model I had. I have found a NIB (New In Box) Royce 639, which was my very first SSB rig. I have not been able to come up with a NIB Galaxy 2100 but I've still got my eyes and ears open. I also managed to get my hands on my 1978 "dream setup." After the Royce, I really wanted to get a President Madison with a Turner SSB+2 desk mic. Well in 1978 that combo was well over $500.00, so that was that. I managed to pick up both items, brand new in their respective boxes with all the protective plastic shields intact. So now you know about my little "museum." Sure would like to get a hold of a NIB Galaxy 2100 though. This was the rig that made me want to get my Novice ticket in 1987. It went up to 28.315 MHz and I'd just started to listen to the CW QSO's between 28.1 & 28.3 MHz and the few voice ops from 28.31 to 28.315 MHz. I'd love to knock out a quick CW QSO on one and then retire it to the display case. The AR-3500 and Licoln soldier on right now for me. They'll be retired this summer though when the FT-840 finds it's place onto the shack bench. :-)

What we really need to do is to take a look at the way that they advertise items in other countries.
Yeah, man.
Get her on there with no top on and I`ll buy one !!!!!!!!!!!!!!!!!!!! ( I`m not talking about the antenna either !!!!)

I`ll bet you don`t watch tv because they have girls on all of the advertisements trying to sell things.
At least they make the advertisements more interesting.
Instead of losing the girl, put a few more on the site !!!!!!!!

Amen for good looking females !!!!!!!!!!!!!!
This world would really suck without them.

Randy

Perfectly acceptable. You can increase the diameter of your radiating element, this will increase your minimum SWR bandwidth. You can also use an antenna tuner to bottom out the SWR on your set... I wouldn't bother though, at 1.9:1 SWR, that means that about 90% of the signal reaching the antenna is being radiated... you can tinker to get that last few percent, but I guarantee you that it's not going to make any difference at all on the receiving end of your signal... For what it's worth, it would seem that your antenna is too long - you could stand to shorten it a little.

So Mopar,
Is what Aaron is saying that he has some sort
of survey, showing that there is hundreds of
thousands of cb'ers running illegal equipment?
He disputed Jay's statement that there are millions
of plain old cb'ers in the world, so I think the same
with his distorted trolling view of this group.

Landshark

fm
> wouldnt do any harm 10khz's away on ten meters but it would on 11.

You have a choice as to two deviation ratios, some use the term modulation index, to use. It's calculated based on the max audio frequency being transmitted, and the maximum frequency deviation being used. The value is calculated as the maximum frequency deviation divided by the maximum audio frequency to be transmitted. The first choice would use a 5KHz maximum frequency deviation, while the second uses 2.5Khz maximum frequency deviation. The deviation ratios assuming a maximum audio frequency of 2.5Khz in both cases would be 2 in the first case, while the second case would be 1.

The sideband energy is calculated by using what is called "Bessel functions". The understanding of derivation of the results is not really necessary since there are sources that have already tabulated the important results. One such reference is a publication by the "Radio Society of Great Britain" called "The VHF/UHF Handbook" edited by Dick Biddulph (G8DPS). On page 4.36 refer to 'Table 4.7 . Bessel function', figure 4.100, and figure 4.101. Using the table you can clearly see the distribution of the sideband energy.

For a deviation ratio = 2.

Carrier value = 0.2239
1st set of sidebands = 0.5767
2nd set of sidebands = 0.3528
3rd set of sidebands = 0.1286
4th set of sidebands = 0.0341

For a deviation ratio = 1.

Carrier value = 0.7652
1st set of sidebands = 0.4401
2nd set of sidebands = 0.1149
3rd set of sidebands = 0.0020

Referring to figure 4.100 you can easily see that for the two cases anything passed the 4th set of sidebands for a deviation ratio of 2, and the 3rd set of sidebands for a deviation ratio of 1 is very nearly zero, thus you can neglect it.

The practical implication of the above numbers should now be clear to you. For a deviation ratio of 2 sideband energy exists out to four times the

maximum audio frequency being transmitted. For the case of 2.5KHz audio that would work out to 10KHz above and below the carrier frequency. That makes the bandwidth of the FM signal 20KHz wide, which by the way explains why those using FM normally don't operate closer than 20KHz. If you want to dicker about the value for the 4'th set of sidebands, fine, however the 3'rd set is 4 times larger. So if you want to ignore anything passed the 3'rd set of sidebands it still results in a signal with significant energy out to +/- 7.5KHz, which is still a 15KHz wide signal. You can't cram a 15KHz wide signal in to a 10KHz wide channel spacing without expecting some of the signal energy to spill over in to the adjacent channels.

Now if you do the same exercise for a deviation ratio of 1 you get the following results. For the 3'rd set of sidebands you have a signal with a bandwidth of 15KHz, 2*(3*2.5KHz). Since the 3'rd set of sidebands is so small you could ignore it, which then results in a bandwidth of only 10KHz.

Now to the comments you made concerning your "personal experience". Lets get one thing straight right away. Not every CBer has high quality equipment to use. For example the Yaesu FT-840 which you used, which does have an FM option board by the way, I would say has a dedicated AM filter in the IF stage somewhere. Normally those filters are around 6KHz wide more or less. Those filters can be sharp giving the rig good selectivity on AM. However other cheaper equipment, low to mid grade CB rigs, has to depend on the bandwidth of the IF transformers in the IF stage to get their selectivity on AM. The bandwidth in those cases could be much greater, perhaps as much as 8KHz, maybe even more on cheap rigs. So depending on how wide the AM filtering is in the rig, and what deviation ratio is being used by the FM station, will determine if the AM station on an adjacent channel will experience interference. You should be able to work out the simple math for yourself now knowing what the different bandwidths are, and the filter bandwidths.

If you go through the above exercise you will find that yes you can have FM sideband energy show up in the pass band of an AM station on an adjacent channel IF the FM station is using the large deviation ratio. Using the smaller deviation ratio it is possible for the two to use adjacent channels. However I'll bet the operators using FM don't fully understand the technical implications of using FM in an AM band just as apparently you don't. Using the wrong FM deviation ratio can result in interference to other stations using AM on adjacent channels.

I'm not going to address the issue of receiver capture effects when two or more FM stations are transmitting, nor 10m, since that was NOT the point I was addressing when I made my prior comment about a group using FM on the legal 40, and the interference it can cause.

Just a little note to help with the SWR adjustments... Higher SWR on upper channels, antenna is too long. Higher on lower channels, antenna is too short...

What you will want to do is have the lowest reading in the middle channels (19, 20). This will make the end channels a little higher than the middle.... Generally you will achieve the best possible performance across all channels by having the lowest readings in the middle.

Your SWR is actually quite good. If you slide that 1.1 to 1.2 to channel 19/20, I'd guess you should have about 1.4 to 1.5 on 1 and 40, based upon your current readings. This would be the optimal setting.

569. What is semi duplex offset frequency?

Newsgroup: rec.radio.cb
Date: 2002-02-08 16:04:58 UTC
From: snowghost@firedog.demon.co.uk
Message-ID: <28e00c99.0202080804.547a444e@posting.google.com>
Source record: 114881

I've had a pair of Alinco DJ-S41 for a couple of years
and just used them as walkie talkies.

The manual describes being able to set a semi duplex
offset frequency, which I can do, but have no idea what
this does...

Can anyone enlighten me?

Thanks,

Snow

They still make the black version, identical to the original but with an
extra band of 40 channels. There is also a Jackson Classic available, a
limited edition of the original silver model. I have both the original
Jackson and Grant for sale. I'm in UK but shipping shouldn't be a problem.

Have a good cond. TS-430S for sale. It has some scuff and scratches on the covers,but the face is nice.I rate it a 7+ on a 1-10 scale (I'm very picky). Works 100%. Has the narrow CW filter and comes with a MC-80 desk mike and original manual. No FM board. Homebrew power cord. Good for a back up rig,starter rig,portable,etc.
Price is $350.00 + shipping from 96003. I accept Pay Pal.

Without having a clue what freqs these rigs run on or precisely what they mean by semi-duplex I will venture a guess either that they are UHF or Marine.

The most usual situation is for a repeater. On UHF for example you may be on a community repeater at 461.925 as an example. So you set up Channel 2 to both transmit and receive at 461 but set up channel 1 to transmit at 466.925 which is the input freq of the repeater. More or less universally, the 'offset' on UHF is 5 MHz above the output. So this allows you to choose whether to use the repeater. Some Marine channels set up for phone calls use a 4.6 offset.

The latter case is semi-duplex in the sense that you are in control of the conversation via the PTT even tho the phone station is running all the time until you hang up; the circuit is duplex but your HT is not -- it can't transmit and receive at the same time which is needed for 'full duplex' operation. Just for definition, one HT talking to another on the same freq is called 'simplex'.

Sounds like the guy who wrote the manual was more into dictionary use than terms as they are actually used, not uncommon to get manuals in Jinglish or Chinglish. I remember one on a Taiwanese TV set that went something like 'honorable repairman will please not put hand in power cage not wishing to incinerate honorable repairman.'

Source record: 114888

Doc, as you know, simplex involves one frequency. One person transmits while the other receives, then the other guy transmits while the first receives. One frequency is used. In duplex, two different frequencies are involved. One person transmits on the frequency the other guy is listening to and the other guy transmits on a different frequency the first person listens to. True full duplex requires that both ends can transmit and receive simultaneously with the result being similar to a telephone. Both parties can talk (and listen) at the same time. Semi duplex simply means that the transceivers CANNOT listen and transmit at the same time. They do, however, use two different frequencies as in full duplex. There are a few HTs made that are capable of true duplex if used in cross band operations (such as two meters and 440 MHz). In that case, one guy transmits on two and listens on 440; the other guy transmits on 440 and listens on two. As with a telephone, both can talk (and be heard) at the same time.

Personally, I think it all should go to NBFM and SSB.

I think I could make a case for both of these modes.

Off the top of my head, the case would be based upon:
present operating practices.
interference reduction.
the benefits of extended range w/o external power amps and some other
ancillary devices.
perhaps the added benefit of lesser scrutiny by the Fed's.

I could probably come up with a couple more reasons but the ones presented
are large in scope and enough to "chew on" for now.

Well, someone said it was too quiet here. This ought to give someone enough
ammunition to start a squirmish.

BobC. ;-)

Snowghost, see my reply to Doc. I am not familiar with the Alinco DJ-S41, but if they are for an amateur band, that could be used to set an offset for repeater use. The repeaters simultaneously receive on one frequency and transmit on another. Your HT would be set to transmit on the repeater's listening frequency and you would listen to the repeater's transmit frequency.

Snow

They may be discussing how to install a non-standard offset.

On the ham bands the offsets are pretty much standardized.

These offsets are usually preprog'd into the radio. However, there are exceptions to this and when you want to avail yourself of the non standard offsets you need to tell the radio what the new offset is.

Yes, you can unlock the clarifier. Then you can be pissed because it travels to fast and it's hard to adjust. There is a 20K - 10 turn pot "10 - turn Precision Potentiometer" that slows the travel down after the mod. I'm still using the one in the radio with a larger knob instead. It took a while to get use to the fast travel. After the mod the Grant XL will slide far enough on A.M to work on the Alpha channels,,,,,19 to 19 Alpha, or in-between 19 and 20. And the same for the lower Alpha channels.

I've got my Grant XL's unlocked and its a pain to get use to. About 1/16th of a turn and look out! After you unlock the clarifier you *will* have to line up the frequency's again. Upper side band and lower side band, and AM too. I did my own, 4 Grants and my dads Washington base. Its no big deal if your comfortable with a soldering gun, desoldering gun too. Plus you have to know where to solder the wire from the clarifier after cutting it from the board. To explain where it goes, it goes to pin 3 of IC4 mb3756 8.2 constant volts. My advice is to send it to someone and have the slower pot put in too.

Once there was a beautiful woman who loved to work in her vegetable garden, but no matter what she did, she couldn't get her tomatoes to ripen. Admiring her neighbor's garden, which had beautiful, bright red tomatoes, she went one day and inquired of him his secret.

"It's really quite simple -- twice each day, in the morning and in the evening, I expose myself in front of the tomatoes and they turn red with embarrassment."

Desperate for the perfect garden, she tried his advice and proceeded to expose herself to her plants twice daily...

Two weeks passed and her neighbor stopped by to check her progress. He asked if she had had any luck with her tomatoes.

"No" she replied, "but you should see the size of my cucumbers!!!

Did you hear about the Kentucky red neck who passed away and left his entire estate in trust for his beloved widow? The only catch is that she can't touch it until she's 14.

How do you know when you're staying in a Kentucky hotel? When you call the front desk an say, "I've got a leak in my sink," and the person at the front desk says, "Go ahead."

An Arkansas State trooper pulls over a pickup truck on I-40 and says to the driver, "got any ID?" The driver says, "'Bout what?'

Two Mississippians are walking toward each other, and one is carrying a sack. When they meet, one says, "Hey Tommy Ray, whatcha got in th' bag?' "Jes' some chickens." If I guesses how many they is, kin I have one?" "Shoot, if ya guesses right, I' give you both of 'em!" Okay......Ummmmmmm ....five?"

An Alabamian came home and found his house on fire. He rushed next door, telephoned the fire department and shouted, "Hurry over here muh house is on fahr!" "Okay," replied the fireman. "How do we get there?" "Shucks, don't you fellers still have those big red trucks?"

Why do folks in Kentucky go to R-rated movies in groups of 18 or more? Because they heard 17 and under aren't admitted.

Billy Bob and Lester were talking one afternoon when Billy Bob tells Lester, "Ya know, I reckon I'm about ready for a vacation. Only this year I'm gonna do it a little different. The last few years, I took your suggestions as to where to go. Three years ago you said to go to Hawaii. I went to Hawaii and Betty Sue got pregnant. Then two years ago, you told me to go to the Bhahamas, and Betty Sue got pregnant again. Last year you suggested Tahiti and darned if Betty Sue didn't get pregnant again." Lester asks Billy Bob, "So, what you gonna do this year that's different?" Billy Bob says, "This year I'm taking Betty Sue WITH me."

Ida Mae passed away and Bubba called 911. The 911 operator told Bubba that she would send someone out right away. "Where do you live?" asked the operator. Bubba replied, "At the end of Eucalyptus Drive." The operator asked, "Can you spell that for me?" After a long pause, Bubba said, "How 'bout I drag her over to Oak Street and you pick her up there?"

Know why they raised the minimum drinking age in Alabama to 32? They wanted to keep alcohol out of the high schools.

What do they call reruns of "Hee Haw" in Mississippi?.....
Documentaries.

Where was the toothbrush invented? Kentucky. If it was invented anywhere else, it would have been called a teethbrush.

Did you hear about the $3,000,000 Indiana State Lottery? The winner gets $3 a year for a million years.

Why did O. J. Simpson want to move to West Virginia? Because everyone has the same DNA.

A new law was recently passed in North Carolina so that when a couple gets divorced, they're still brother and sister.

What do a divorce in Alabama, a tornado in Kansas, and a hurricane in Florida have in common? Either way, somebody's fixin' to lose a trailer.

If you're not an "older woman" yet, this will give you encouragement!

Andy Rooney says, "As I grow in age, I value older women most of all. Here are just a few reasons why:

An older woman will never wake you in the middle of the night to ask, "What are you thinking?" She doesn't care what you think.

An older woman knows herself well enough to be assured in who she is, what she is, what she wants and from whom. Few women past the age of 50 give a damn what you might think about her.

An older single woman usually has had her fill of "meaningful relationships" and "commitment." The last thing she needs in her life is another dopey, clingy, whiny, dependent lover!

Older women are dignified. They seldom have a screaming match with you at the opera or in the middle of an expensive restaurant. Of course, if you deserve it, they won't hesitate to shoot you if they think they can get away with it.

Most older women cook well. They care about cleanliness and are generous with praise, often undeserved.

An older woman has the self-assurance to introduce you to her women friends. A younger woman with a man will often ignore even her best friend because she doesn't trust the guy with other women. Older women couldn't care less.

Women get psychic as they age. You never have to confess your sins to an older woman. They always know.

An older woman looks good wearing bright red lipstick. This is not true of younger women or drag queens.

Once you get past a wrinkle or two, an older woman is far sexier than her younger counterpart. Her libido's stronger, her fear of pregnancy gone. Her experience of lovemaking is honed and reciprocal and she's lived long enough to know how to please a man in ways her daughter could never dream of.
(Young men, you have
something to look forward to.)

Older women are forthright and honest. They'll tell you right off you are a jerk if you are acting like one.

Yes, we praise older women for a multitude of reasons. Unfortunately, it's not reciprocal. For every stunning, smart, well-coifed babe of 70 there is a bald, paunchy relic in yellow pants making a fool of himself with some 22 year old waitress.
Ladies, I apologize for all of us. That men are genetically inferior is no

secret. Count your blessings that we die off at a far younger age, leaving you the best part of your lives to appreciate the exquisite woman you've become, without the distraction of some demanding old man clinging and whining his way into your serenity.

signed: Andy Rooney

Sad day when you realize you are all grown up.
1. Your potted plants are alive. And you can't smoke one of them.
2. Having sex in a twin-sized bed is absurd.
3. You keep more food than beer in the fridge.
4. 6:00 AM is when you get up, not when you go to sleep.
5. You hear your favorite song on an elevator.
6. You carry an umbrella. You watch the Weather Channel.
7. Your friends marry and divorce instead of hookup and breakup.
8. You go from 130 days of vacation time to 7.
9. Jeans and a sweater no longer qualify as 'dressed up.'
10. You're the one calling the police because those darn kids next door don't know how to turn down the stereo.
11. Older relatives feel comfortable telling sex jokes around you.
12. You don't know what time Taco Bell closes anymore.
13. Your car insurance goes down and your car payments go up.
14. You feed your dog Science Diet instead of McDonald's.
15. Sleeping on the couch makes your back hurt.
16. You no longer take naps from noon to 6 p.m
17. Dinner and a movie - The whole date instead of the beginning of one.
18. Eating a basket of chicken wings at 3 a.m. would severely upset, rather than settle, your stomach.
19. You go to the drugstore for Ibuprofen and antacids, not condoms and pregnancy test kits.
20. A $4.00 bottle of wine is no longer 'pretty good stuff.'
21. You actually eat breakfast foods at breakfast time.
22. "I just can't drink the way I used to," replaces "I'm never going to drink that much again."
23. Over 90% of the time you spend in front of a computer is for real work.
24. You don't drink at home to save money before going to a bar.
25. You read this entire list looking for one sign that doesn't apply to you!

An Irishman with a bad leg hobbled into a restaurant one afternoon. He painfully sat down at a booth and asked the waitress for a cup of coffee.

Irishman looked across the restaurant and asked, "Is that Jesus over there?". The waitress nodded so the Irishman told her to give Jesus a cup of coffee too.

The next patron to come in was an Englishman with a hunched back. He shuffled over to a booth and asked the waitress for a glass of hot tea.

He also glanced across the restaurant and asked "Is that Jesus over there?". The waitress nodded so the Englishman said to give Jesus a cup of hot tea too.

The third patron to come into the restaurant was a Redneck. He swaggered over to a booth, sat down and hollered "Hey there sweet thing, how about gettin me a cold glass of Coke!". He too looked across the restaurant and asked "Is that God's boy over there?". The waitress nodded so the Redneck said to give Jesus a cold glass of coke too.

As Jesus got up to leave. He passed by the Irishman and touched him and said "For your kindness, you are healed. The Irishman felt the strength come back into his leg and got up and danced a jig out the door.

Jesus also passed by the Englishman, touched him and said, "For your kindness, you are healed." The English man felt his back straightening up and he raised up his hands, praised the Lord and did a series of back flips out the door.

Then Jesus walked towards the Redneck. The Redneck jumps up and yells, "Hey, man don't touch me......I'm drawin disability!!!!!"

Young King Arthur was ambushed and imprisoned by the monarch of a neighboring kingdom. The monarch could have killed him, but was moved by Arthur's youth and ideals. So the monarch offered him freedom, as long as he could answer a very difficult question. Arthur would have a year to figure out the answer; if, after a year, he still had no answer, he would be put to death.

The question: What do women really want? Such a question would perplex even the most knowledgeable man, and, to young Arthur, it seemed an impossible query. But, since it was better than death, he accepted the monarch's proposition to have an answer by year's end.

He returned to his kingdom and began to poll everybody: the princess, the prostitutes, the priests, the wise men, the court jester. He spoke with everyone, but no one could give him a satisfactory answer. Many people advised him to consult the old witch--only she would know the answer. The price would be high; the witch was famous throughout the for the exorbitant prices she charged.

Finally the last day of the year arrived and Arthur had no alternative but to talk to the witch. She agreed to answer his question, but he'd have to accept her price first:
The old witch wanted to marry Gawain, the most noble of the Knights of the Round Table and Arthur's closest friend!

Young Arthur was horrified: She was hunchbacked and hideous, had only one tooth, smelled like sewage, made obscene noises... etc. He had never encountered such a repugnant creature. He refused to force his friend to marry her and have to endure such a burden.

Gawain, upon learning of the proposal, spoke with Arthur. He told him that nothing was too big a sacrifice compared to Arthur's life and the preservation of the Round Table. Hence, their wedding was proclaimed, and the witch answered Arthur's question thus:

What a woman really wants is to be in charge of her own life. Everyone instantly knew that the witch had uttered a great truth and that Arthur's life would be spared. And so it was. The neighboring monarch granted Arthur total freedom.

What a wedding Gawain and the witch had! Arthur was torn between relief and anguish. Gawain was proper as always, gentle and courteous. The old witch put her worst manners on display, and generally made everyone very uncomfortable. The hour approached. Gawain, steeling himself for a horrific experience, entered the bedroom. But what a sight awaited him! The most beautiful woman he'd ever seen lay before him! The astounded Gawain asked what had happened. The beauty replied that since he had been so kind to her when she'd appeared as

a witch, she would henceforth be her horrible, deformed self half the time, and the other half, she would be her beautiful maiden self.

Which would he want her to be during the day, and which during the night? What a cruel question! Gawain pondered his predicament. During the day, a beautiful woman to show off to his friends, but at night, in the privacy of his home, an old witch? Or would he prefer having by day a hideous witch, but by night a beautiful woman with whom to enjoy many intimate moments?

What would you do? What Gawain chose follows below, but don't read until you've made your own choice.

Noble Gawain replied that he would let her choose for herself. Upon hearing this, she announced that she would be beautiful all the time, because he had respected her enough to let her be in charge of her own life.

What is the moral of this story?

The moral is: if a woman doesn't get her own way, things get ugly!

Doc,

Your admonition about AC line voltage is a few years too late.

I was working on an overhead light fixture and had flipped the breaker
that contrrolled that light. Much to my surprise, inside the switch
box was another circuit. Ouch!! Especially on a concrete slab.

I did do a quick "google" on the manufacturer of the lamp and most of
the hits were in reference to court proceedings. Therefore thought I
would check other avenues.

Perhaps you can explain why touch control lamps are better antennnas
than ...?

Ace

Bill,

We had the power company check these things several years ago. We have underground utilities and the man even dug up the connections at the street and checked. No problems were found. I myself had checked main breaker box prior to contacting the power company.

Your post got me to thinking though; The connections at the meter itself have never been checked. Is it possible?

Actually I am convinced the power company is raising/lowering voltage. We are sitting eating breakfast a lot of times with nothing on except fluorescent lights and see them brighten???

Bill,

Please see my response to Bill Nelson regarding power company.

My "experiment" with the ferrite ring was a no-go. About 9:00 P.M. both lamps came on all by themselves. One with the ring and the other without.

What gives with these things? We have the normal house wiring, and the lamp control is a little plastic box approx. 2 inches x 3 inches x 1 inch thick. I "assume" the AC from the control to the bulb itself is unaffected by any interference. Therefore the only thing susceptible to interference is the wire going to the shade holder which you touch to control the lamp. I replaced this single conductor with a shielded conductor and still have the problem.

Again, I figure it's a voltage drop/increase causing the problem. If I am correct, can anyone explain why/how this is happening?

Brilliant insight Mr. Hand. I do not work for the FCC, so why take my word for it? The only way you can settle this is to ask the FCC yourself. Call or write them. Ask them whether the "freeband frequencies" are abandoned and available for unlicensed CB use.

You are exactly right. It is split frequency.

On ham and business band as well as a few other services, it is common to use full duplex, half duplex or semi duplex (the terms are synonymous) and simplex operation.

In full duplex operation, your transmitter and receiver are operating simultaneously. They will, out of necessity, be operating on 2 different frequencies. An example of full duplex is a cellphone, a repeater, a regular telephone.

In half or semi duplex operation (the terms are synonymous), the radio will still be txing and rxing on 2 different frequencies. However, the tx and rx will not be on simultaneously. The tx will normally be off and will begin only when the ptt button is pressed. An example might be a mobile or hand-held radio used on a repeater frequency.

In simplex operation, the radio will tx and rx on the same frequency. You can only use a half or semi duplex radio in simplex use because the rx will only hear the tx since they are on the same freq. An example of this is a cb set.

During duplex or semi-duplex operation The difference between the tx and rx freq.'s is called the "offset amount" or "split". i.e. Like rxing on ch 1 and txing on ch 40. Subtract the lower freq. from the higher freq and the difference is the "offset".

The offset is somewhat standardized for most of the different radio services. However these offsets are not always written in stone and some services allow a choice of offset amounts.

The amount of offset, without regard to convention or rule, can be any amount that the type of operation and equipment will technically allow.

In full duplex operation, the minimum amount of offset is generally limited by the selectivity in the rx path. The rx path includes the selectivity of the rx and the selectivity of any filters placed before the rx. The minimum offset is also affected by the amount of tx noise being transmitted in close proximity to the rx freq. This is a very brief note on the constraints of full duplex operation.

In half-duplex operation the minimum offset is not limited by the selectivity of the rx path. An example might be operating your rx on ch 1 and tx on ch2. This would work because the rx and tx are not on at the same time.

Since there's no offset on simplex there's nothing to describe.

Did this help anyone?

BobC

Did the power company worker check the voltage drops?

Sometimes, simply tightening the lugs in the distribution panel is not
enough. This is especially true wherever there is aluminum wire.

Did you check all the screws on the various circuit breakers?

Are you competent to use a voltmeter to check the voltage drops at
the connections of the main feeds into the panel? The difference in
voltages between the two hot wires and the common should not be more
than 1-2 volts.

> Your post got me to thinking though; The connections at the meter

It certainly is possible, and is a frequent cause of problems.

> Actually I am convinced the power company is raising/lowering voltage.

Fluorescent lights generally do not change intensity unless there is
a serious voltage change - and then they usually flicker or go out.

Here is a test for you that will reduce the possibilities. Make sure the lamps are on different circuits. Then, if they both turn on at the same time, then it is not due to that one circuit, but possibly something affecting the whole house.

Some of the lamps will "fail on". In other words, if the power is shut off (or reduces sufficently) and then turned back on - the light will come on. The same thing happens with the remote light controls (X-10?) like you can buy at Radio Shack.

It is in the way the switches work. The power up state is not absolute. They can power up turned on or turned off.

Try turning a lamp off, then unplug and replug it into the wall socket. Do that a number of times. See if the light comes on.

Does this problem occur throughout the day - or only during narrow time periods?

The down-and-out Blonde...

A blonde named Barbi finds herself in dire trouble.
Her business has gone bust and she is in serious financial trouble.
She is so desperate that she decides to ask God for help.
She begins to pray, "God, please help me. I've lost my business and if I don't get some money, I'm going to lose my house as well. Please let me win the lotto."

Lotto night comes and somebody else wins it.
Barbi again prays, "God, please let me win the lotto! I've lost my business, my house and I'm going to lose my car as well." Lotto night comes and Barbi still has no luck.

Once again, she prays, "God, have you forgotten me?? I've lost my business, my home and my car. My children are starving. I don't often ask you for help and I have always been a good servant to you. PLEASE just let me win the lotto this one time so I can get my life back in order."

Suddenly there is a blinding flash of light as the heavens open and Barbi is confronted by
the voice of God himself - "Barbi, meet me halfway on this... BUY A TICKET!!!"

This kid knows the answer...

One day at kindergarten a teacher said to the class of 5-year-olds, "I'll give $2 to the child who can tell me who was the most famous man who ever lived."

An Irish boy put his hand up and said, "It was St.Patrick."
The teacher said, "Sorry Sean, that's not correct."

Then a Scottish boy put his hand up and said, "It was St. Andrew."
The teacher replied, "I'm sorry, Hamish, that's not right either.

Finally, a Jewish boy raised his hand and said, "It was Jesus Christ."
The teacher said, "That's absolutely right, Marvin, come up here and I'll give you the $2."

As the teacher was giving Marvin his money, she said, "You know Marvin, since you're Jewish, I was very surprised you said Jesus Christ."

Marvin replied, "Yeah. In my heart I knew it was Moses, but business is business!"

The rich lawyer...

At the United Way in a fairly small town a volunteer worker noticed that the most successful lawyer in the whole town hadn't made a contribution. This guy was making about $600,000 a year so the volunteer thought, "Why not call him up?"

He calls the lawyer...
"Sir, according to our research you haven't made a contribution to the United Way, would you like to do so?"
The lawyer responds, "A contribution? Does your research show that I have an invalid mother who requires expensive surgery once a year just to stay alive?"

The worker is feeling a bit embarrassed and says, "Well, no sir, I'm..."
"Does your research show that my sister's husband was killed in a car accident? She has three kids and no means of support!"

The worker is feeling quite embarrassed at this point. "I'm terribly sorry..."
"Does your research show that my brother broke his neck on the job and now requires a full time nurse to have any kind of normal life?"

The worker is completely humiliated at this point. "I am sorry sir, please forgive me..."

"The gall of you people! I don't give them anything, so why should I give it to you!"

Brainbuster.

According to Trend Micro, an average of 500 new viruses are discovered every month. They update the pattern files weekly, but that still leaves over 100 new viruses in that time... and that doesn't include those that they are working on creating detection for.

One thing I don't get... when you look on the anti-virus websites (and databases), the data includes if the virus is "in the wild". HTF do they get hold of the viruses and create the cures before they are released? Some viruses they list never get "released", is there something they are not telling us?
Could they be getting "pirate" copies of the viruses... "pirate" software often seems to be available before the real thing.

I use "Scan Mailbox" to check all my post while it is still on the server. I can see a list of items, subjects, file sizes etc and delete anything I don't like the look of even before my "pop3" virus scan takes a look.

My server refuses to send my e-mails out if I include an executable file with them, I get a "bounced mail" notice that explains that you cannot send certain file types. I do not know if they do the same with incoming mail, or if they just protect everyone exept their customers.

Brainbuster.

I've been a "catbox licker" for many, many years. I would highly suggest to
you that you go and try it for yourself.
Our understanding of you so far is that you "ain't had pussy since pussy had
you" so this might be a whole new experience for you.

all of the answers are true. but this can only be used on repeter function,unless you can reverse the rx and tx on each radio. radio a tx's on 151.000 and radio b tx's on 151.000 and they both rx on 151.250 most all ham equitment lets you reverse this if you want. so that radio a would tx on 151.000 and rx on 151.250 and radio b would do just the opisit. but this isn't practical.

when you boil all the bull sh*# aside there for repeter use.

Howdy,
I'm looking for an SSB filter for an old Royce 1-632 mobile. It may have been used in several different models. Has a part number of "MFL-45501L" made by TOKO, Inc. About 2" long, .5" wide and .5" tall. May be gray in color. I'll buy the whole radio if it's a parts unit. Thanks, Jim.

i think you guys are full of shit. there has been enough TV publicity about ham radio and cb to where people know there is a difference. if they see you driving down the street with a antenna or in your house with one they might not know the difference by sight but if you took 10 seconds out of your day to explain they would know. remember, just about everybody over 30 has talked on a cb at least once back in the 70's

>

hi leland, my 840 never had the fm option installed. my FM experience on cb ceoms from 2510's 2950's and the export rigs and not one of them has ever had a a person on FM take up mopre than the channel he was on. all this techno mumbo jumbo BS your speaking about does not change the fact that in the real world what you said does not happen. i think your just glad were finally discussing FM which falls nicely under your realm of experience as a no coder. now you can talk about something you know a little about even though your wrong about this.

>
>You have a choice as to two deviation ratios, some use the term modulation
>index, to use. It's calculated based on the max audio frequency being

leland, when you make a wild ass statement such as you did the burden of proof os on you buddy. i have 4 manuals to radios here with the TX/RX specifications so me knowing is not a problem. i find it funny you made such a rock solid incorrect statement about FM on cb while all the while not even knowing what the common deviation used in these type radios are. your too funny.

You know the saying, "what goes around comes around"? I'm the guy people see to make it "come around" a little faster, for a price. Think of it as "pest control"... watch "the Star Chamber" starring Michael Douglas, and you'll understand. 3 years of forensic studies in the Academy was a big help, too (even though I started out in the bunco div)... not exactly a squeaky-clean business once you've been on the inside.

the Karma Enforcer

So you've ssen a movie you liked and now you're pretending to be a hit man/thug in a cb newsgroup. OK, that's nice for you, Karma. You might want to get together with SD Jones. He has similar fantasies of physical violence and WWF type vendettas. Don't worry, it is normal for the adolescent brain go a little wacky with that stuff.

Actually Tim, I rec'd my ham license a while ago and I'll post my call
if Jay in the Mojave and the other keyclowns do.

Let's count em:

Jay in Mojave - Ham, won't post call
Ice Cold - Ham? Won't post call
Train - Was a ham, won't post call
Skipp - Ham, won't post call
Phoneman - Was a ham, won't post call

Why would you want to post your ham call. Everyone can go to WMD7 web page
and find out your address.

Hello Jim Warner:

I would think TOKO could sell you a replacement, but might be expensive.

Look at e-bay on the CB page at:
http://listings.ebay.com/aw/listings/list/all/category1501/index.html

and type Royce 1-643 into the search box, and then bookmark it for
looking at every now and again, you will find one in time.

CONGRATULATIONS, Keith! Enjoy. Check into the repeaters in your area, you may find some with internet linking (at least one in my area does, I've yakked with Florida with it), and you might even have a link to a 10 meter port on one (we do, and I've used it to yak with Australia - all RF). Enjoy!

John,

Don't ya think you were a little harsh on the guy?

Ya know....normally.... I don't take exception or respond to the stupid things that are printed here but....today is your lucky day. You stood on a nerve.

Let me start this off on the proper foot. You are a fucking asshole! There, I feel better.

Just Who do you think you are? Who are you to decide what someone will know? Who are you to prescribe what someone will own? Is your name Castro?

All by yourself, in a sentence or two, you've managed to completely ignore virtually every facet of the Constitution of the United States. Are you running for office? Like maybe King or Despot?

And don't get me wrong, I'm not saying you cannot say these things or believe in what you're saying. I fought for your right to do just these things. I believe everyone is entitled to their opinion....no matter how fucking stupid it may be!

Get a life and by the way, hiding behind the ARRL's name doesn't cut any ice with me. I'm not impressed in the least bit. If anything, I think your just one of those lil self important wannabe's who, if allowed their way, would dictate we all ate oatmeal for breakfast everyday at 5 am, lunch at 10am, dinner by 4pm and bed by 7pm. We'd all be talking on 40 meters complaining

about the blood in their stool, their hiatal hernias and those damn childproof pill bottle caps.

Now, take that with you when you leave! People like you just piss me off. Now why don't you just toddle off somewhere and get your diaper changed Mr. Pissypants.

The radios he's using for "walkie talkies" are on the 440mhz amateur band.

Ever heard of the Communications Act? Go ask the FCC if it's OK to transmit anywhere you want without authorization.

Talk about living in a "pirate dream world"...yeesh!

Putz.

pick up

"Hello?"

Hi, honey, this is Daddy," .... "Is your Mommy near the
phone?"

"No, Daddy. Shes upstairs in the bedroom with Uncle Frank,"
After a brief pause, Daddy says, "But you haven't got an Uncle
Frank, honey!"
"Oh Yes, I do, and hes upstairs in the bedroom with Mommy,
right now!"

"Uh, Okay, then......here's what I want you do. Put down the
phone,
run upstairs and knock on the bedroom door and shout to Mommy
and Uncle Frank that Daddy's car just pulled up outside the house."

"Okay, Daddy!"

A few minutes later, the little girl comes back to the phone.
"Well, I did what you said, Daddy." "And what happened?" he asks.

"Well, Mommy got all scared, jumped out of bed with no clothes
on and ran around screaming, then she tripped over the rug and went
flying out the front window and now she's all dead."

Oh my God!!!!! And what about your Uncle Frank?"

"He jumped out of bed with no clothes on too and he was all
scared and he jumped out the back window into the swimming
pool.....but he must have forgot that last week you took out all
the water to clean it, so he hit the bottom of the swimming pool
and now he's all real dead too."

long pause
...
...
...
...
...
Then Daddy says, "Swimming pool????

Safe Flight

A plane was taking off from Kennedy Airport. After it reached a comfortable cruising altitude, the pilot made an announnncement over the intercom.

"Ladies and Gentlemen, this is your captain speaking. Welcome to Flight No. 293, nonstop from New York to Los Angeles. The weather ahead is good and we should have a smooth and uneventful flight. Now, just sit back and relax."

Then he quickly yells out loud - "OH MY GOD!"

Dead silence followed.

After a few minutes, the pilot comes back on the intercom and says, "Ladies and Gentlemen, I am so sorry if I scared you earlier, but while I was speaking, the flight attendant brought me a cup of hot coffee and spilled it all over my lap. You should see the front of my pants!"

A passenger in Coach shouts back, "That's nothing, you should see the

back of mine!"

===

FM does not have to be "wide bandwidth". NBFM is not "wide bandwidth".
In the UK, if people stay within the spec, 10KHz spacing is not a problem.

The problem is the "screwdriver experts" (Lou's army), who think that the bandwidth is equal to the deviation, or just don't care as long as they "make a fast buck" out of a "tune up". Often, the user is unaware of the problem... the "rig doctor" is not going to talk the punter out of paying for a "tune up" by telling him about "splatter".

But then Lou did tell CBers that they do not need technical knowledge to repair, tune and modify radios - just a soldering iron, screwdriver, a desire to make money... and any book that he will make a buck or two out of.

Hey, isn't Lou a licensed Amateur. Surely a Ham would not encourage illegal modifications (including CBers taking CBs to the "freeband" and 10 Metres), specially on an international scale?

Oh I can hear the excuses now: "Maybe he's a ham". If he is, he ain't too smart. He chose a CB NEWSGROUP to ask his question in instead of the US VHF ham newsgroup or even the UK VHF ham newsgroup. Yeah, the VHF HAMS wouldn't know anything about HAM equipment, right?

Face it, he's bootlegging on 440 mhz and he's got three HAMS (Doc, Jerry and Dick) politely helping him to do it.

Idiots.

A long time ago when America was being settled, a group of people headed west in a wagon train from the East coast.

The wagon train leader was very inexperienced and soon the people realized they were hopelessly lost. After wandering for weeks and weeks, their food supplies were gone
and winter was fast approaching.

As the group came over a hill they saw the first person they had seen for days; an old Jewish man sitting beneath a tree. The leader of the wagon train approached the man. "Can you help us? We're heading west but
we're lost and all our food is gone. We're starving."

The old man replied, "Vell you know, I can see the future...Vait.. I'm getting a vision now." He held one hand to his brow and closed his eyes in concentration. "It's
coming. Oh yah, I see, I see." "I know vut you gotado. Go up dishere hill
und down other side. Go through forest und across the stream. Den go up next
hill und down to dat valley below. There you vill find ah bacon tree."

"A bacon tree?" asked the wagon tree leader.

"YA, ah bacon tree. Trust me.. for nuttin I vud lie. I can see the future."

The wagon train leader shrugged and headed off. The group followed the strange old man's directions exactly. They went up the hill, down the other side, through the forest, across the stream, up the next hill
and down to the valley below.

Nothing. Zip. Zilch. Not a damned thing and especially not a bacon tree.

All of a sudden, out of nowhere, came Indians from all sides.

It was a massacre. All but one man was killed, and even he was seriously wounded.

He crawled up the hill, crawled across the stream, crawled through the forest, crawled up the hill and crawled down into the valley. There, under the tree was that same old
Jewish man, having a glass tea, right where they had left him.

The injured man crawled up to him and started shouting..... "What were you thinking? You sent us all to our deaths!

We followed your instructions to the letter!

We went up the hill, down the other side, through the forest, across the stream, up the next hill and down the valley below. NO BACON TREE! Just Indians, thousands of friggin' Indians! And the rest of my group? THEY'RE ALL DEAD!

The man held up his hand and said "Oye, vait A minute, vait A minute... I'm getting anudder vision.... Oyeeee. Ooooh. NOW I get it....G'VALT, I make ah big mistake...

it vuz not a bacon tree... It vuz a ham bush!"

In a crowded city at a crowded bus stop, a stunningly beautiful young woman was waiting for the bus. She was decked out in a tight black leather mini skirt with matching leather boots and jacket.

As the bus rolled up and it became her turn to get on the bus, she became aware that her skirt was too tight to allow her leg to come up to the height of the bus' first step.

So, slightly embarrassed and with a quick smile to the bus driver, she reached behind her and unzipped her skirt a little, thinking that this would give her enough slack to raise her leg. Again she tried to make the step onto the bus only to discover she still could not make the step.

So, a little more embarrassed, she once again reached behind her and unzipped her skirt a little more. And for a second time she attempted the step and once again, much to her dismay, she could not raise her leg because of the tight skirt.

So, with a coy little smile to the driver, she again unzipped the offending skirt to give a little more slack and again was unable to make the step.

About this time the big Texan that was behind her in the line picked her up easily from the waist and placed her lightly on the step of the bus. The pretty young woman went ballistic and turned on the would-be hero, screeching at him, "How dare you touch my body!! I don't even know who you are!!!!"

At this the Texan drawled, "Well ma'am, normally I would agree with you but after you unzipped my fly three times, I kind a figured that we was friends."

TOP EIGHT MORONS OF THE YEAR
1. WILL THE REAL DUMMY PLEASE STAND UP?

AT&T-fired President John Walter after nine months, saying he lacked intellectual leadership. He received a $26 million severance package.

Perhaps it's not Walter who's lacking intelligence.

2 WITH A LITTLE HELP FROM OUR FRIENDS:

Police in Oakland, California spent two hours attempting to subdue a gunman who had barricaded himself inside his home. After firing ten tear gas canisters, officers discovered that the man was standing beside them in the police line, shouting "Please come out and give yourself up."

3. WHAT WAS PLAN B???

An Illinois man, pretending to have a gun, kidnapped a motorist and forced him to drive to two different automated teller machines, wherein the kidnapper proceeded to withdraw money from his own bank accounts.

4. THE GETAWAY!

A man walked into a Topeka, Kansas Kwik Stop, and asked for all the money in the cash drawer.
Apparently, the take was too small, so he tied up the store clerk and worked the counter himself for three hours until police showed up and grabbed him.

5. DID I SAY THAT???

Police in Los Angeles had good luck with a robbery suspect who just couldn't control himself during a lineup.
When detectives asked each man in the lineup to repeat the words, "Give me all your money or I'll shoot, the man shouted, "That's not what I said!"

6. ARE WE COMMUNICATING??

A man spoke frantically into the phone, "My wife is pregnant and her contractions are only two minutes apart!"
"Is this her first child?" the doctor asked.
"No!" the man shouted, "This is her husband!"

7. NOT THE SHARPEST TOOL IN THE SHED!!

In Modesto, California, Steven Richard King was arrested for trying to hold up a Bank of America branch without a weapon. King used a thumb and a finger to simulate a gun, but unfortunately, he failed to keep his hand in his pocket.

8. THE GRAND FINALE

Last summer, down on Lake Isabella, located in the high desert, an hour east of Bakersfield, California, some folks, new to boating, were having a problem. No matter how hard they tried, they couldn't get their brand new 22 ft going. It was very sluggish in almost every maneuver, no matter how much power was applied.

After about an hour of trying to make it go, they putted to a nearby marina, thinking someone there could tell them what was wrong. A thorough topside check revealed everything in perfect working condition. The engine ran fine, the outdrive went up and down, theprop was the correct size and pitch.

So, one of the marina guys jumped in the water to check underneath, he came up choking on water, he was laughing so hard.

NOW REMEMBER.THIS IS TRUE...

Under the boat, still strapped securely in place, was the trailer.

Sometimes we just need to remember WHAT the Rules of Life really
are....

1. Never give yourself a haircut after three margaritas.

2. You need only two tools. WD-40 and duct tape. If it doesn't move
and it
should, use WD-40. If it moves and shouldn't, use the tape.

3. The five most essential words for a healthy, vital relationship "I
apologize" and "You are right."

4. Everyone seems normal until you get to know them.

5. When you make a mistake, make amends immediately. It's easier to
eat crow while it's still warm.

6. The only really good advice that your mother ever gave you was,
"Go! You
might meet somebody!"

7. If he/she says that you are too good for him/her-believe them.

8. Learn to pick your battles; ask yourself, 'Will this matter one
year from now? How about one month? One week? One day?'

9. Never pass up an opportunity to pee.

10. If you woke up breathing, congr! atulations! You have another
chance!

11. Living well really is the best revenge. Being miserable because of
a bad or former relationship just might mean that the other person was
right
about you.

12. Work is good, but it's not that important.

13. And finally... Be really nice to your friends. You never know when
you
are going to need them to empty your bedpan.

Yeah OK, dinky. Read the Communications Act Of 1934 and then get back
to me.

http://showcase.netins.net/web/akline/1934act.htm

>Have you caught this man using
>these radios?

Dinky, read his post again. The key word is USED. He USED them.

You can drag out all the rhetoric you want about his 'right to own the
radios' or get info about their operation. But since the guy CLEARLY
admitted he uses the radios my response (and John's) was quite
appropriate. Conversely, yours was rather deranged.

So what's the big deal with that? Anyone who'd want to find out your address and do you harm would be putting themselves at risk for legal action under most states stalking laws, and the prison terms that go along with them.

So why worry?

Aaron

You're about as small minded as can be. All you can see are the walls of that little enclave of cb vs. ham or 26.965 to 27.405.

Let me put forth a few ideas for you. The ones your narrowly focused mind just seemed to overlook.(just like John's)

#1 You've missed the whole point of my dissertation. I'll reiterate. I objected to John's interpretation of the US Constitution. Apparently he feels that no one should know anything that he doesn't personally approve of.

#2 I disagreed with John's take on being able to own something just for the sake of owning it. Who are either of you to say I/we can or cannot own something as innocuous as a hand held radio on the basis of "just because I can"?

#3 Have you personally heard, or do you know of anyone that has heard, any interference from these radios' operation? Have you caught this man using these radios? Has anyone caught him? Do you think the FCC even gives more than the tiniest of turds about this guy using these radios?
(a) you did know that the FCC previously "allowed" inland operations of marine radio's for non- marine operations per a
non-interference basis didn't you?

#4 Did you see me advocate the use of these radios? Just because I didn't vehemently embrace this man because he owned them doesn't mean I would necessarily agree with his use of them. I am pretty sure someone like you would have, by now, informed him of the responsibilities of their use. I find no need for me to bash this guy into submission by repeatedly abusing him with rules. I think once is enough. (A concept that you might consider

embracing)

Eagerly awaiting your next dribblings. BobC

>
>

Not at all, FM is a receiver-dependent system -- feed the receiver what it wants or you sound like crap if you are intelligible at all. As Leland points out, FM bandwidth is a function of highest modulating frequency and deviation setting. Given that you have the sense God gave a billy goat you fill the receiver bandpass and nothing more.

The Brits I am told require a receiver bandpass no greater than 8 kHz so it is a great idea to hold your deviation to 2 kHz or so. As this is generally done with a limiter in much the same way it is done on a proper AM arrangement, it gives you more real talk-power to let the limiter do its thing. But on both sides of the pond assorted jackasses clip and fiddle with limiters with similar effects.

So yes, let the deviation get to 5 kHz and you will send substantial slop into neighboring channels no matter what is done to the receiver. FM is kinda cute but it sure as hell ain't magic.

Why indeed, look me up on QRZ.com. Look me up in the Omaha phone book.
Try to get something by the e-mail screen.

Why give in to the threat of terror?

Yeah But Richard,
I have been not more than one to two hundred yards
from people using FM on say channel 33 and I had
no adjacent bleed over of any kind on 32 or 34 or for
that fact most any channel on cb. How come then if
Leland is correct?

Hello Moparholic: Yes this may a good point to consider.

How ever the fuel injection works pretty well. I am sure Ronnie , Eight Zero One, opened up this engine pretty well. It was totally disassembled and rebuilt will with all the good stuff. Ronnie tried to tell me about all the engine rebuilding stuff, but I had him put it on the receipt, as a itemized list.

Ronnie use to work for Bill Stroup in Long Beach California, up on Signal Hill were all the Pantaras were tested, and the Broncos use to race in the Baja 500 and 1000 races. So he knows his engine stuff.

He has a old 1948 Ford Pick-Up Truck that has a built 302 to the ceiling that I would like to buy.

I have a buyer for my 66, but I'll be made at myself for selling it, I know.

Sounds to me as if some FM transmitter owners have left the limiter alone. FM can be done in 10 kHz channels just as AM can be done in 10 kHz channels and now and again is.

Just means that Red the Technician down at Happy Larry's Truck Stop, Mortuary, and Emporium of CB Delights hasn't yet figured out how to sell overpriced trash to idiot CBers using FM.

All Leland proved was that max deviation in a 10 kHz channel is about 2kHz, he did not guarantee splatter.

By the way, if your clarifier also works on AM, you can 'slope detect' the FM audio.

> -Aaron-

Dear confused and narrow minded, It's just rhetoric to you. I knew that. The Constitution is always just rhetoric, a trifle to people like you. You've completely missed the point of my reply to John. All the two of you seem to be interested in is hanging this guy because he "may have" put his tiny little signal momentarily onto your precious(to you) hamster band.

The key words are "due process". Basically, what gives you or anyone the right to accuse him, try him
and execute him? Who are you and John to deny him rightfully owned property and the information he requests? I'm glad we are in America.

Did he "clearly" admit to using the radios? Did he "clearly" admit to not having a ticket? Did he actually say he tx'd on them or did he just listen? What frequency did he use them on? Was he under a 100 mw.'s? How many times did he tx if he did? If at all, did he use these radios for the protection

of life, limb or property? You just assumed the worst but your proof isn't forthcoming. Here, I stole the Lindbergh baby. Did I? Did he?

Ok Aaron. Where in your precious act of 1934 does it specify that he cannot own or learn about the operation of a radio he is LEGALLY entitled to own?

Why do you consider it deranged for me to protect my property of the Constitution while you protect your little slice of radio spectrum. Materially they are the same. Both are intangible. Both are available to all US citizens. If push came to shove I believe my endeavor would mean more to the remainder of the country than your unsubstantiated whining about a guy owning a couple of insignificant radios.

Take this with you when you leave:
Aaron, there are greater things in this life than envisioned in your limited philosophy.

Oh and that little crack about being a "Radio Pirate". I haven't used a cb or ham radio in several years. I basically got tired of whiny, self important, ass wipes, not unlike yourself, on both the ham bands and cb.

> just leland talking again without any real world experience other
> than two meters
===

Hi Tim.

It works perfectly OK, as long as you keep it NBFM. The deviation for the uk system was set at 2.5KHz, which worked fine. Once the deviation is increased, the problems start.
The deviation for new equipment was reduced, but this makes it worse, as more people think they are too quiet and so have it turned up. Once one or two have "loud" audio, everyone else sounds quiet and is told to have their audio turned up.

There are possible problems with any mode if the "rig doctor" does not know when to stop, or how to adjust things properly. In the UK, With FM, splattering is common - with SSB, poor bias, carrier balance and osc frequency adjustments are common. AM CB is hardly used in the UK now, so "swing" is not an issue here.

Over here, the radios are so cheap that owners will not often pay much for a repair, and if you pay peanuts... you will get monkeys.

Brainbuster.

> Dinky, read his post again. The key word is USED. He USED them.

He could have just as easily said he used his 27 inch penis to repeatedly
screw you in the ass. While this does nothing to prove the size of his
member, we can dervive from this that because it was done many times and not
called rape that you liked it.

Well.....If he clearly admits to the 27 inch penis, then you must have
liked it.
Just because he "says" he has something or has done something, nothing says
any of it is true! Cry and whine on DOUCHENER!
Train

Conversely, yours was rather deranged.

Hello Landshark: Yeah!

Speaking of Miss Dinah, she is having local TV commercials now on cable TV.

I was ah watching TV here last night, in Trona, and saw Miss Dinah all cleaned and gussied up, standing in front of the fillin station talking about her filling station and Bar & Grill. She cleans up pretty fine.

She was talking about the price of gas, you can buy a homemade Pizza, and pick up a 12 pack of Beer, having a sale on most popular Ammo, Cigarettes cheaper than in the city, and most "keep ya goin" groceries, at reasonable prices.

I made her a scanner antenna but the TV commercial didn't show it.

I am thinking of going over there today and telling her she was looking real fine, on TV, then complain that the price of gas is way to high. Think that will spin her up?

I know how to talk to em, ah!

Hello SideBand: Here's some pointers:

1- Offer help to the new guys here on the ng, that are asking
questions.

2- Don't post your call sign this really irritates them big time.
In your case say the FCC took you Lic away, then say ya got another
one back, but don't post it!

3- Talk about radio subjects that are over their head, not real hard.

4- Be friendly and helpful, act like a real human being helping out.

5- Mostly ignore them, this shoots them down big time, when no one
responds.

6- Take the time to look up links that might help someone out,
answering a
question.

7- Try not to feel as if they were beat up a lot in school, for telling
the teacher this and that.

8- When the broken record rhetoric, is posted, simple ignore it.

9- When using the words "Linear Amplifier" always capitalize the first
letters.

10- Remember no matter where ya go threes always someone wanting to
argue
with ya, you choose when, what, and where.

That'll get ya back on line!

Jay in the Mojave, #1 Ham Radio Operator, and CB radio enthusiast, type
ah guy.

Look in the early Cybernet PLL02A chassis.

You can broadband a new VCO to work in it, as well.

If your a REAL tech, build a VCO. Not easy, but if the radio has
sentimental value, you can do it to get it back on the air.

Otherwise, Knights in the UK was the last place I knew of that carried
cybernet equipment and parts new.

Determining the sex of a fly

A woman walked into the kitchen to find
her husband stalking around with a fly swatter.
"What are you doing?" She asked.
"Hunting Flies" He responded.
"Oh!, Killing any?" She asked.

"Yep, 3 males, 2 Females", he replied.
Intrigued, she asked. "How can you tell?"
He responded, "3 were on a beer can,
2 were on the phone".

JAy:

Heh. That was funny..

Honestly, and I've said it before, I personally don't have a problem with CBers running a little power, so long as they do it cleanly so they don't interfere. I also, personally, don't have a problem with "freebanding", provided they stay off the frequencies where others have licenses to transmit. (That means the 10 and 12 meter HAM bands.)

If anyone's having trouble, and I have the information to help, I'll help, JUST so there's no further interference to licensed operators.

If my helping someone encourages them to go out and get their HAM license, GREAT! I just hope they don't leave their CB hobby behind.. I know I didn't.

Thanks for the explain.
I remember when the 2510 first came out, we used
FM on usually 36 and later at night it was great because
it was clear with virtually no interference. That's why I
questioned the splatter stuff, as stated previously when
in close proximity to someone using FM, we never had
and adjacent channel bleed over.

Heh-heh...

If he doesn't stop getting himself worked up over things he has no control over, that's exactly what folks that know him best are going to be doing.

Folks like me that don't know him from Adam wont give a hoot either way. :-)

If it was a little extra I might. However the Wilson 1000 is 2x's as much as the little Wil.

I wont be an everyday user so I can deal with a bit less performance.

Would the Wilson be the better choice?

I think Lou is a classic example of the reality that everyone who stays radioactive for long ultimately earns an Amateur ticket by sheer osmosis if nothing else. Back in the days, it would sit next to the first class radiotelephone commercial ticket.

You guys get to pay for yours, beyond the ten rasbuckniks to take the test and that is up from zero, we never come up with a dollar again forever. So the posession of a US ham ticket forever does not prove a whole lot.

I am reminded of the necessity to 'sell' one's diagnosis if one is not an MD. This is really Lou's point. There is also the story of the optometrist training his son in the business: You tell the customer that the bill is $150. If he doesn't flinch you say 'for the frames. The lenses are another $150'. If he still doesn't flinch you add 'Each'

> >
> > Dick

If you look up the allocations in the 27 MHz band, a lot of them in 'Emission" have 20F3 and you will note that their channels are on 20 kHz spacing. This is 5 kHz deviation which is pretty standard on the newer repeater freqs on two meters, the upper part of the band having proven that 15 kHz spacing does not work. The UHF bands are in flux but they will probably end up on 12.5 kHz spacing which will limit deviation to 2.5 or so which makes me wonder how multiband rigs will work. Look up FM broadcast and they will be authorized 75F3 which is why FM is on 200 kHz channels and adjacent ones are not assigned anywhere near each other; in this case, 75 is the deviation.

One of the reasons CB was not FM in 1959 was that a theory held from the early days of FM that deviation had to be 5 times the maximum modulating frequency so 15 kHz audio required 75 kHz of deviation while communication audio could do with 15. Channels at that time were spaced 50 or 60 apart. The channel numbers on marine radios are all upgescrewed for this reason. They were originally on 50 kHz channels and were split to 25s so channel 1 is 156.050, 2 is 156.100 but 61 is 156.025 and 62 is 156.075 with Channel 16 protected with the full 50 kHz. The ham bands started at 60 and 146.94, 146.88, 146.82 etc. are the most popular to this day, got split to 30, and then 15 with inputs reversed on the split-splits in the West and not in the East. Made no diff, 15 didn't work either way and started a rush to CTCSS encoding on repeaters, Motorola's name for this is Private Line or PL and that name stuck.

Just be happy you are not running FM below 29.5 where the regs require a 6 kHz bandwidth. This was once common because the phasing SSB rigs generally could do phase modulation (FM with a rising audio freq/deviation characteristic) as a by-product. It was no match to SSB. Incidentally, true FM (deviation purely a function of audio strength) was not possible for a number of years so it became common to use PM with a roll-off in the receiver without which it sounded tinny as hell. When it became possible and common to do true FM, it was found that PM was better for noise so the rigs in question more than likely do true FM thru the PLL and pre-emphasize the audio to make it sound like PM. Life do get weird on occasion.

In the event your vco module is unavailable elsewhere, you might look into Mini Circuits. They have a broad line of vco's and I believe I saw one in their catalog that would work perfectly for you. You might need to adjust the range of tuning voltage or perhaps add an attenuator to the output of the new vco so it drives the radio correctly. Good luck BobC

Message-ID: <fbc7a2.0202101429.6a47b3b4@posting.google.com>
Source record: 115059

I have been looking at some of the keydown websites and a thought occurred to me. The premise of a keydown is to intentionally interfere with another station, thereby causing a third (receiving) station to be unable to copy it. Since the goal is to jam, then why not used some of the more advanced methods that the military has perfected in the field of Electronic Countermeasures? Multiple transmitters on offset frequencies generating square wave tones, for example. Or an EMP pulse that would disable the competitor's equipment. Or conductive fiber strands dropped on the competitors antenna system shorting it to ground. The military is so far ahead of you guys in terms of technology, you ought to look into it :)

750. Re: CB antenna?

Newsgroup: rec.radio.cb
Date: 2002-02-10 22:35:39 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3C66F5BB.56E6B94C@qnet.com>
Source record: 115061

Hello Jeff: Yes small world ain't it, TILT! Wow!

I use to live my folks when I was around 18 or 19, and bought a 1966 Ford Bronco, it had a little 170 CI six cylinder, with once pipe.

I drove it down to Wally's (handle was Bronco) place in Long Beach, he was having antenna troubles that turned out to be a mis tuned Linear Amplifier.

Wally says ya need a Hi Po 302 V8 in that thing, with the Borg Warner T-10 4 speed transmission. With all the Hi Po expen$$ive parts. Well I let Wally talk me into all the "Hi Po" Ford stuff for the engine swap project.

I drive down to Wally's place and we drive on down to Bill Stroup's shop and I get to meet Bill, Bitcheeen! Bill says real quick "Wally says ya want the good stuff" I replied "Yeah" what a command of words I have.

Bill says, "yeah know what ya want", takes me around and gets the Bell Housing, clutch, pressure plate, flywheel, throw out bearing, and the special adapter that goes between the T-10 Tranny and the Transfer case, and the actual new Ford Motor Mount Horns that get welded to the frame for the 302 V8, motor mounts, you couldn't steel those back then!!!!

Bill says: "Now go on over to the parts counter and order the Hi Po 302 kit. Well all Bill wants is 40 dollars for about 300 dollars worth of parts, so I give em a 100 dollars before you could blink. But the stuff at the parts counter, they where real proud of, that was a mere 2 grand for all the Hi Po parts. So now I was living off Moms cooking and doing extra work to cover the check I wrote. But it was all worth it!

The 302 V8 ran great allowing the Bronco to burn the tires, and tear up everything, even the rear end after a few hundred miles, it hauled ass big time with the Hi Po 302 V8, T-10 Tranny, and 4:11's in the rear!

Dad wanted me to turn down the horse power, till he raced a few guy in his Kawanis Club. Dad then called Bill Stroup to find out what he could do with his 1964 Custom Cab, with the old Y block 292, sled turd-mobile.

Bill says "Yeah come on down" Dad bought a engine rebuild kit for a old Lincoln 430 with the automatic tranny. All of a sudden Mom got a new car, and the old 1964 Lincoln was retired so that it could give up its 430 V8 engine and automatic tranny, to the ol mans 1964 Custom Car Pick-up truck.

Dad never asked me to tone down the Bronco, after that. But the 64 Pick up truck, ran like the wind. Old Bill knew his stuff alright. I believe

Bill and and a lot of the others started out making station wagons run
like the wind with a 500 gallon tank of Moon Shine. What was it
Hollomand, Stroup, and Moody. Now if that don't sound like "The Boys" I
don't know what does!

Yeah please let me know that Modified Penetrator 500-1 works, it a one
of a kind!

Your first?

The premise of a keydown is to intentionally interfere
> with another station,

No, it isn't. Aaron has never been involved with a keydown (admittedly),
so he has no idea what he is talking about when it comes to them. People
need to remember this!

thereby causing a third (receiving) station to
> be unable to copy it.

Actually, it isn't. The goal is to perfect your station to be better at
putting out
RF on a frequency, and have the antenna system to be as near perfect as you
can get it to get the most ERP. The third station is their to provide a
HOPEFULLY unbiased report of how your station did against someone else
that is hopefully equipped with nearly the same equipment.

> Since the goal is to jam, then why not used some
> of the more advanced methods that the military has perfected in the
> field of Electronic Countermeasures?

Because that isn't the goal, and the effect isn't what is wanted.

Apples and Oranges again.

Multiple transmitters on offset
> frequencies generating square wave tones, for example. Or an EMP pulse
> that would disable the competitor's equipment.

As well as anything else that wasn't completely "hollow state".

Or conductive fiber
> strands dropped on the competitors antenna system shorting it to
> ground. The military is so far ahead of you guys in terms of
> technology, you ought to look into it :)

Why, they aren't even trying to acccomplish the same thing.

I suggest you take up talking about "Talking about things I know
little to nothing about", rather than trying to tell people what they
are attempting to do, because honestly, this post proves you

haven't a damn clue as to what the purpose of a keydown is.

Remember, they are the same as amateur contesting, seeing who can
control the pile-up.

Well, I shouldn't say that... Some of the contesters ADMITTEDLY jam
other stations on nearby frequencies to control "there precious area of
spectrum"...

Then again, thats why they use some of the other methods the military uses,
like
pulsed RF output, spread spectrum jamming, etc.

Agreed...

And that bad connection can take the CBer down the street, running a watt or less, rectify it at the mains connection (or whereever the problem is manifesting itself at), and cause all kinds of havoc.

Your original post did infer to people that you stole the equipment, or at least imbezzled it.

"I have some nice power suppiles that I kinda made dissapear from my company's inventory"

Kinda made disappear, eh? That would be stolen. "Power supplies that are written off the
books, and are now up for sale" would be the correct terminology for your pilfering.

Still tryin to come up with them 20s to show Tim?

Does it matter? No.

>
> If the answer is no, you are stealing from the rightful owners.

How so? If he was told to write them off and dispose of them, once they
hit the garbage, they are public property.

Therefore, it wouldn't be stealing.

However, I would tend to agree with your Aaron, his wording DOES imply
impropriety in the acquisition of the supplies.

>
> If the answer is yes, will the profits from sale of the items go into

And if it is a partnership, and his partner said "just get RID of these",
then
he owes him nothing legally, but morally would be a diff story.

Aaron speaks of which he knows little.

Can I get a model number for this? The biggest I know of is the 300A Leece.

For bigger, you either go to C.E. Neihoff or Electrodyne.

to supply power
> for lighting and equiptment
> cant say about keydowns

They are. And since the powerband is so narrow, you can tune them up at cruising speed, and not have to worry about changing speed on the highway to keep yoru amp in tune (since power input is proportional to the rotating speed of the rotors in the alternators).

Cookie had a single AC alternator, that feeds a seperate DC rectifier, into the battery bank, feeding a 64 pill.

Excess of 20 thousand watts output.

With DC, all you have to do is add batteries to make up for the lack of alternators. That isn't the limiting factor.

For DC, you count output transistors, since they are what keeps everyone on an even keel. For AC, you coun't alternators.

I know that Pit Bull pulled up to the line with his 16 pill in his old
pickup truck.

The truck was overheating. He HAD to shut it off on the line.

He still keyed, standing outside the vehicle, with the engine OFF.

He won. All the way.

Batteries are what provides the DC power for the DC class, not alternators.
An Alternator
can't supply the peak current needed (which is why you DON'T use a deep
cycle battery alone)
for solid state competition amps.

Yep, exactly. The truth is that the touch lamp is the worst thing ever invented by man, next to the 'clapper'. There's a section in one of the arrl manuals devoted to fixing these things. The Part 15 warning should be engraved on the base in 36 point letters.

Why not?

A 300 A leece neville will power a 16 pill all day long at full output.

Besides, as I keep saying, just increase the amount of batteries, use a dead motor maul on a 24 volt system, their are MANY ways to get your DC output up, using a single alternator.

Then its pointless, as people have run 0 alternators in teh 16 pill class
and won with the engine off.

Batteries keep your current available in DC, not alternators. However,
having the proper number of
alternators for your class means you don't have to haul all those batteries
around, and it keeps the batteries
in better shape.

Because it skips just like any other modulation method at that frequency.

However, FM is a little harder on the ear than SSB during times of bad fade.

Hi,
Please give me suggestions about how to reduce TVI and improve safety.

Radio Shack Base antenna (1985-Blue)
10 Ft mast
Grounding from mast to ground rod with solid copper #6.
Ground clamp on base and rod.
8Ft copper type grounding rod.
Radio Shack RG-8 25 ft coax.
Low pass TVI filter
RF choke at base of antenna

If the power supply for my Cobra 28 is connected to a 3 prong grounded outlet, do I still need to ground it?

There is a ground rod for the electric service 14 ft from my antenna ground rod. Should I connect them together?

Should another ground rod be placed outside the shack to ground power supply, radio, and tvi filter? If so, how do I connect grounding wire to all three(each is will then be about 15 feet from each other)? Will I then have to connect all three grounding rods-and with what?

TIA

What other problems exist in that bedroom outlet??? Bad outlet, one
beaten to shit, wired backwards, loose neutral, bad breaker, etc. Is the
kitchen on a GFI? Is the bedroom on a 240 lead with the outlets on one
side and the lights on the other; floating neutrals can cause fluctuations
all over creation. 1972 or so house with aluminum wiring? And the beat
goes on, and on, and on.

>equipped with nearly the same equipment.

Then why not key one at a time and measure the results with a field strength meter on a calibrated range? If you truly wanted to measure the ERP of two transmitters for comparison, you would not key both transmitters at the same time. You would key each one separately, and measure each one separately.

>>Since the goal is to jam, then why not used some
>>of the more advanced methods that the military has perfected in the
>>field of Electronic Countermeasures?

>Because that isn't the goal, and the effect isn't what is wanted.

Then why are the two mobiles keying at the same time? Certainly the 'effect' of one mobile interfering with another is a distraction that someone seeking to measure ERP would seek to avoid.

>Remember, they are the same as amateur contesting, seeing who can
>control the pile-up.

You must be thinking of some other kind of contesting. CQ and QST publish the rules for amateur contests, and in all cases they cite the goal of the contest as obtaining "the most number of stations worked".

>Well, I shouldn't say that... Some of the contesters
>ADMITTEDLY jam other stations on nearby frequencies
>to control "there precious area of
>spectrum"...

Never heard of this. Although there IS a certain type of op that delights in creating malicious interference, they are in the minority. It must be the gang YOU hang around with, Toll. Do you guys get together and swap tall tales about "controlling the frequency"? LOL.

From: 'Doc <w5lz@icok.net>
Message-ID: <3C673FAF.3BFC235C@icok.net>
Source record: 115099

Ace,
Touch control lamps aren't supposed to be good antennas,
but they usually are because of how the 'contol' circuit
works. It works by sensing a change in reactance across a
capacitor. When there's a fairly good size reactance change
across the capacitor, it's sensed by the lamp and it turns on.
That change in reactance, or charge across the capacitor is
produced by your hand being close to the capacitor (lamp shell).
Unfortunately, RF will also induce a change in the charge on the
capacitor if the RF field is strong enough. That change in
the charge will make the lamp turn on/off. So, the lamp makes
for a pretty good antenna. The 'trick' to correcting this is
to desensitize the lamp's sensing circuit.
Good luck...
'Doc

790. Re: Which type of battery

Use the large 'starting' batteries. The 'deep cycle'
types are not much good for the type of current being
drawn by a radio.

Amateur Radio Newsline Report 1278 – February 8, 2002

Amateur Radio Newsline report number 1278 with a release date of Friday, February 8th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Another Anthrax scare halts mail to the FCC in D.C. and ham radio growth may not be as good as it seemed. These stories are first on Amateur Radio Newsline report number 1278 coming your way right now.

(Billboard Cart Here)

**

AMERICA AT WAR: FCC STOPS D.C.MAIL DELIVERY DUE TO NEW ANTHRAX SCARE

The Federal Communications Commission says that it will not accept paper mail in the Washington D.C. area until further notice. This, after a trace amount of the Anthrax virus was found during a routine test. Amateur Radio Newsline’s Paul Courson, WA3VJB, is in the nations capitol with the details
--

The scant amount of anthrax contamination found at a Federal Communications Commission mail facility in Maryland last week was consistent with cross-contamination of mail. At least that’s what the result of tests conducted by the Center for Disease Control and Prevention showed.

The FCC's mail processing facility in Capitol Heights Maryland, outside Washington, was tested about a week and a half ago as a routine precaution. One sample taken tested positive for Anthrax. The C-D-C blames the problem on cross contamination of mail. This means one or more pieces of mail from another facility may have inadvertently brought the contaminant to the Maryland site.

The agency is arranging for the facility to be decontaminated and re-tested. Mail deliveries, which have been halted, will not resume until the area is found to be anthrax-free. For ham radio, this only affects such things as requesting or commenting on rules change requests.

The FCC said it would also test the mail room at its Gettysburg, Pennsylvania, facility to make sure that it is Anthrax free. Gettysburg is where most Amateur Radio related mail including license applications and renewals are sent and is not affected by this latest paper mail suspension order. At least not so far.

For the Amateur Radio Newsline, I’m Paul Courson WA3VJB in Washington.

--

Late last year five people, including two postal workers, died of the inhalation form of anthrax and more than a dozen were infected in a series of attacks that followed the terrorist raids on the World Trade Center and the Pentagon. So far no arrests have been made in that case. (Published news reports)

**

SPACE AND SCIENCE: ON-ORBIT COMPUTER FAILURE CAUSES ISS OUTAGE

Ham radio was there but it was not needed. That’s the basic wrap up after a computer failure aboard the International Space Station sent the 17-story complex into a slow drift for a few hours on Monday February 4th.

The temporary outage also disrupted voice communications with the ground using normal channels. It also brought science research to a halt. But NASA officials said that neither the station nor its crew ever were in any danger.

The station drift was halted about 17:00 GMT. That enabled the crew to begin the job of re-orienting the stations solar panel arrays. Once normal power levels were restored, systems and experiments that had been shut down were brought back on line.

The computer shutdown was eventually traced to a defective hard drive. James Hartsfield, a spokesman for NASA's Johnson Space Center in Houston said that the three ham crew was never in any danger as a result of the failure. He termed it nothing more than an interruption to their normal work day.

Launched last December 5th on board the shuttle Endevour, Russian cosmonaut Yuri Onufrienko RK3DUO and U.S. astronauts Daniel Bursch KD5PNU and Carl Walz KC5TIE are the forth crew to inhabit the I-S-S. In addition to all of the high tech communications gear the crew also has ARISS - the ham radio station on board the International Space Station as backup voice and data communications. It was available, albeit not needed this time around. (ARNewsline(tm) from NASA Release)

**

HAM RADIO GROWTH: CENSUS REDUX

Some dark news following the good news on ham radio growth patterns. The numbers may not be as good as we reported two weeks ago. So says Fred Maia, W5YI, who follows growth trends in ham radio. And Fred says that the numbers we presented are overly optimistic:

--
Fred Maia:

“The FCC database is a database of all amateurs who have been licensed for twelve years. Thats ten years for the license term and an additional two. The reason it stays in the database for the additional two is so that it can be renewed diring the grace period. Thefefore, the licenses in the database are two years more thanthe ten year term or twenty percent inflated.”

--

In our story we used statistics from several sources including QRZ, W5YI and others. But Fred says that there are more recent numbers that show things may not be as good as they may seem on the surface.

According to Fred, as of January 15th 2002 there are actually only 98,030 holders of the Extra class license, 86,425 legacy Advanced, 138,546 Generals, 318,603 Technicians and legacy Tech plus and only 39,972 Novice class. The total is 681,576. That is considerably lower than the 720,194 in the latest QRZ census and 10,424 lower than the adjusted 692,000 we believed to be accurate.

The bottom line. Once you take away the expired licenses that are in their grace renewal period, the club and military recreation stations and the like the numbers tell a different story. One thats not nearly as rosy as we and others thought only two weeks ago. (ARNewsline(tm))

**

WINTER OLYMPICS 2002: COMMEMORATIVE STATION ON THE AIR

The Winter Olympics are in Salt Lake City Utah and ham radio is helping to celebrate the games with a special events station. Linda Reader, N7HVF, has more:

--
“Its going to start on Thursday at 5 PM Mountain Standard Time and it will go until the 25th of February. It will be available on all bands, so people will only need to listen around. The station call will be W7U and the trustee is W7EO.”
--

Again, listen for W7U celebrating the 2002 Winter Olympics through February, 25th. (N7HVF)

**

Break 1

(5 sec pause here)

**

SPECTRUM: WHITE HOUSE PROPOSES PAYOUT TO CHANGE FREQUENCIES

The Bush administration says that it will propose setting up a $715 million fund to reimburse federal agencies that relocate their RF operations. This, for moving away from spectrum that has already been auctioned to commercial service providers.

In the past, federal agencies have had to negotiate with the winning bidders to cover relocation costs. In fact, following the September 11th terror attacks the Pentagon said it would not move off bands that it uses for military training and other purposes without sufficient funds to pay for relocating.

This created a stalemate over making available airwaves hotly desired by mobile telephone companies like Verizon Wireless. Now, in his budget just sent to congress, President Bush proposes setting up a fund to streamline the reimbursement process. Auction receipts to cover agency's relocation costs would be paid into the fund and federal agencies would be reimbursed for their relocation costs out of the proceeds.

What does this mean for Amateur Radio you ask? Simply that more spectrum that hams share with the government and military could be up for grabs sooner than most thought it might happen. But even with the subsidy some analysts of military communications say that it still could take several years before you see any spectrum moves take place. (Published reports)

**

FCC: OLYMPICS CAN USE 2300 MHZ HAM BAND FOR OLYMPICS

Broadcasters at the 2002 Winter Olympics have been granted a Special Temporary Authority from the FCC to use a ham band for their coverage of the Salt Lake City games. The S-T-A was made available at the request of the Salt Lake Organizing Committee R-F coordination group to use 2300 to 2305 and 2390 through 2450 MHz for remote pick-ups at various Olympic venues.

Unlike Australia two years ago, this FCC action does not take hams off the air nor does it forbid amateur use of the band during the period of the S-T-A. Instead it took action reminiscent of one that helped to establish ham radio’s “National Frequency Coordination Council.” The agency told all spectrum users that it had designated the Salt Lake Organizing Committee is the single point of contact or “SPOC” in regard to all Olympics radio frequency requirements. This delegated authority continues with the committee through March 31st. (FCC, Broadcasting & Cable, ARNewsline(tm))

**

PUBLIC SERVICE: HAM RADIO AT THE SUPERBOWL

Last week’s Super Bowl played in New Orleans between the St. Louis Rams and the New England Patriots was a squeaker to the very last play. With the game tied at 17 to 17, in the 4th quarter, New England opted for a Field Goal that brought them victory in the very last seconds of normal play. It was a game seen by millions, but what t-v viewers did not see was the work of a group of New Orleans area hams who were a part of the behind the scenes communications effort for the game. Amateur Radio Newsline’s Don Wilbanks, KC5MFA, lives in the Big Easy and has this look at the role that ham radio played:

--
While thousands cheered on the Rams and Patriots inside the Superdome and millions watched on television around the world, a handful of New Orleans hams were busy outside in the streets of the Crescent City.

--
“K5OEP go ahead.” “Checking in, nothing to report. Everything’s normal. WA5RT 2104 aaah, Poydras and South Claiborne.” “K5OEP roger, 2218. Other station?”
--

K5OEP is the call sign of Southeast Louisiana ARES. New Orleans area hams assisted the American Red Cross as they provided tracking for those sent to area shelters or hospitals should the unthinkable occur. Several Emergency Response Vehicles were in use feeding the workers and standing by in reserve should they be needed in an emergency. The ERV’s had a staff of 2 plus a ham with voice capability and APRS tracking. There were “Action Teams” standing by with a ham and a dual band HT. Hams also manned a command post trailer at City Hall as well as the Red Cross operations center on Canal Street and another Red Cross office in suburban Metairie. The communications operations began on Friday, February 1st and continued Saturday as well as Super Bowl Sunday. Tom Miller, AC5TM, ARRL Louisiana Section Emergency Coordinator and Keith Barnes, W5KB of the Red Cross were instrumental in putting the effort together. The local CBS affiliate, WWL-TV channel 4 did a lengthy report on the Red Cross, of which about a minute was focused on the hams. Several hams were featured on camera in the piece. Thankfully, this is representative of most of the radio traffic.
--
“K5OEP this is W5GAD.” “W5GAD, K5OEP go ahead.” “Just checking in Josh and, um, if it’s possible could we get a cup of coffee next time the truck comes down this direction?” “This is KC5BCR, we’re gonna take care of that coffee request.”
--

Only three things occurred that could be considered out of the ordinary... a semi-nude escapee jumped off a bridge to evade capture, a Rolodex in the Superdome caught fire from being too close to a light and the New England Patriots finally won the big game. And isn't it fitting that an underdog team called the Patriots would be victorious on this first Superbowl since September 11th. Next on the agenda for the city... Mardi Gras on Tuesday, February 12th. From Party Central in New Orleans, Louisiana, I'm Don Wilbanks, KC5MFA.

--

Before we leave this one we have some interesting statistics. According to the Broadcasting and Cable newsletter, Super Bowl 36 delivered the Fox Television Network a 42.5 rating and 61 share in what are called the metered Nielson overnight market ratings. This means that about 67 percent of United States households with television sets had them tuned to the game at some point during the telecast. (ARNewsline(tm) - Produced by KC5MFA with sound provided by KD5BLV)

**
RESCUE RADIO: HAMS ASSIST FOLLOWING QUAKE IN TURKEY

Amateur Radio operators in Turkey were among the first to respond in the wake of a earthquake that rocked the province of Afyon on Sunday February 3rd. More than forty were killed and at least 170 were injured injuries were reported in

the aftermath of the 6 point zero tembler. Structures were destroyed and lines of communications were cut. Enter Amateur Radio.

According to an ARRL bulletin members of Turkey's Civil Defense Search and Rescue Team responded following the quake. The bulletin quotes Aziz Sasa, TA1E, the president of the Turkish national Amateur Radio society as saying that S-A-R communicated with it's headquarters in Ankara and within the affected area. This was because ham radio was the only long and medium-range communication resource available until normal lines of communications were restored. Most ham radio communications was on VHF using a system of linked repeaters. (ARRL)

**

RESCUE RADIO: AMATEUR RADIO OPERATORS HELP SAILBOAT IN DISTRESS

The ARRL Letter says that Amateur Radio played a role in the rescue of two people aboard the sailing vessel Antigone. This, after it ran aground off Honduras on Thursday, January 24th.

Ed Petzolt, K1LNC, of Hobe Sound, Florida, told the Letter that, despite some apparently deliberate interference, members of the Intercontinental Net on 14.300 MHz helped relay communications from the vessel, which was equipped with an High Frequency marine radio.

David Walz, AG4LI/HR6, in Honduras was in contact with the boat and passed traffic from the stranded mariners to the Net. Petzolt said he was able to patch the US Coast Guard in Miami through to Walz, so the Coast Guard could obtain additional information and coordinate with Honduran authorities.

Petzolt said the two passengers aboard the 40-foot vessel were safe, and the boat was on the beach. The FCC is reportedly investigating the interference issue. (ARRL)

**

HAM RADIO SCHOLARSHIPS: QUARTER CENTURY WIRELESS ASSOCIATION

The Quarter Century Wireless Association has announced its funding several scholarship for 2002. There are eleven QCWA scholarships valued at $1000 each and five valued at $1500 each to be awarded later this year. Hams interested in applying for the QCWA Scholarships should contact the Foundation for Amateur Radio. The Foundation administers the scholarships sponsored by the QCWA. Additional information and an application form may be requested by letter or QSL card to the FAR Scholarships, Post Office Box 831, Riverdale, Maryland, 20738. (QCWA)

**

HAMFESTS: LIMARC N.Y. FEBRUARY 24TH

LIMARC -- New York's Long Island Mobile Amateur Radio Club will hold its annual indoor Ham Radio flea-market On Sunday, February 24th. Location is the Levittown Hall beginning at 9 a-m. More information is on the web

www.limarc.org. (N2DO)

**

THE HANDI-HAMS: 2002 CALIFORNIA CAMP FULL

The Minnesota based Handi Hams say that their California Radio camp is now full. This year, campers will be treated to presentations by Jeff Reinhardt, AA6JR, for Alinco, and everybodys favorite ham radio instructor Gordon West, WB6NOA. The dates for the 2002 Handi Ham California Camp are March 3rd to the 10th at Camp Joan Mier in Malibu. More is in cyberspace at www.mtn.org/handiham/workshop.html. (HandiHams)

(5 sec pause here)

**

EMERGING TECHNOLOGY: SUPER NET HAS ARRIVED

Australia’s new super-net has had its first successful demonstration, proving it can carry an enormous amount of data between two locations. In fact, its not just fast. It is virtual reality come to life. Q-News Graham Kemp, VK4BB, has a look at what super net can do:

--
In its 'maiden voyage,' the new high speed networking technology --10 Gigabit per second Ethernet -- ran a revolutionary combination of technology that allowed two people, in different locations, to work together on a virtual 3D object, each being able to feel the object and see what the other person was doing to it. At the same time they could use a studio quality video link to communicate.

These two functions were tested in a situation where they had to compete against a volume of network traffic equivalent to Sydney's telephone system at peak levels.

The demonstration involved networking a virtual environment from two separate sites, CSIRO's Virtual Environments laboratory at the Australian National University and CSIRO's corporate headquarters several kilometres away.

--

According to Graham, networks such as this will allow users in several locations to feel computer generated objects such as body organs. Among other things, this tactile ability means a surgeon could train many students in different cities at the same time. (Q-News)

**

EMERGING TECHNOLOGY: CENTRAL STATES VHF SOCIETY CALL FOR PAPERS

The Central States VHF Society will be holding it's 36th Annual Conference later this year. The dates are July 26th to the 28th at the Sheraton Four Points Hotel in Milwaukee, Wisconsin.

And now comes an invitation to those interested in making presentations at this event. You are invited to submit an outline to Marc Holdwick, N8KWX, who is this years Technical Program Cairman.

Holdwick says that any topic related to weak-signal VHF operation is welcome and can be submitted in either paper or electronic format. But says N8KWX, those submitting will be required to have the finished work in his hands by May 5th to be included in the printed Proceedings.

If you are interested in taking part, you can contact Mark Holdwick by e-mail n8kwx@csvhfs.org. His snail-mail address is PO Box 6051, Buffalo Grove, Illinois, 60089. More information is on the web at www.csvhfs.org/CSVHF02.HTML (CSVHFS)

EMERGING TECHNOLOGY: RF CONTROL OF BIOMOLICULES

Scientists from the Massachusetts Institute of Technology Media Lab report that they can now control biomolecules with radio frequency energy. Bruce Tennant, K6PZW, reports:

--
Biomolecules such as proteins and nucleic acids are basic building blocks in nature. They carry out a wide variety of nano-scale functions, many of which have proven useful in drug discovery, drug delivery, biocatalysis, and bio-materials. But to optimally exploit these capabilities, researchers must be able to rapidly control their activity.

Now in the paper, titled "Remote Electronic Control of D-N-A Hybridization Through Inductive Coupling to an Attached Metal Nanocrystal Antenna, researchers describe a unique method to do this. One that employs the phenomenon of inductive coupling to metallic nanoparticles by radio frequency energy to specifically and remotely control DNA molecules. And they say, it works.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW.

--

Their paper was published in the January 10th issue of the journal Nature. More information is available at www.engeneos.com. (Technology Today)

**

INTERNATIONAL - UK: NEW RSGB PRESIDENT

The Radio Society of Great Britain has a new President. As of January 1st, Bob Whelan, G3PJT, has taken up the leadership position at the United Kingdom’s national ham radio society.

Whelan says that he is looking forward to the challenges ahead in raising the awareness of the value of Amateur Radio as a way of interesting the next generation of radio engineers and scientists. He will serve a two year term leading the RSGB. (GB2RS)

**

INTERNATIONAL – SOUTH AFRICA: NEW SHORTWAVE GUIDE

Media Network reports that a new comprehensive country-by-country guide to domestic and external shortwave broadcasts from sub-Saharan Africa, including opposition broadcasts to the African continent, has been added to the British DX Club web site. The guide, compiled by BDXC editor Tony Rogers and fully updated for the winter schedule period, is available in by-country and by-frequency versions. It can be found on the Articles index page of the web site at www.bdxc.org.uk. (Media Network)

**

CONTESTS: GREAT LAKES QSO PARTY

The Great Lakes QSO Party will begin on Saturday, March 9th at 17:00 UTC and run through Sunday March 10th at 04:00 UTC. The object of this contest is to work as many Great Lakes States as well as VE3 and VE4 Canadian provinces as possible during the allotted time. C-W and SSB are the only modes permitted and operation is on all bands except for WARC. Logs must be submitted by mail before April 25th to the address listed at the contest website. Look for more information at www.geocities.com/mdxa1/qsoparty.html. (E-mail)

**

DX

In DX, the Trindade 2002 PWØT team reports that several major sponsors have come forward providing vital support for the upcoming DXpedition. ICOM America will be providing a number of ICOM IC-756 PRO II transceivers. ICOM will also be sending along an IC-910H for satellite operation. Possibly the first-ever satellite activity from Trindade.

But that’s not all. Electril, a Brazilian manufacturer, has begun shipping antennas to the team staging area and Bob Heil, K9EID, of Heil Sound has personally made arrangements to insure that the DX’ers will have new reliable headsets. Meantime, JA1FGI and JA1WSK have covered the cost of purchasing and shipping a complete RTTY, PSK-31 and SSTV equipment package. Lastly, its reported that the Six Meter Amateur Radio Klub and the Chiltern DX Club are the first organizations to provide the D-Xpedition with financial support.

The operators will leave Rio de Janero on February 15th for Trindade. More information is at the DXpedition website located in cyberspace at www.trindade2002.com (PW0T release)

**

THAT FINAL ITEM: THE SWOOPER

And finally this week, a loud buzzing noise being heard in the international shortwave band is apparently a new RADAR system used to measure wave height. According to Mark Fine, the system is located at Barnegat Bay New Jersey and transmits a one megahertz wide signal in varying five megahertz wide segments. Take a listen:

---
swooper audio here
--

Fine tells Amateur Radio Newsline that he made that recording on 4.795 MHz at 1850 UTC on February 5th. He was listening on a Drake R 8 A receiver set to upper sideband and a 2.3 kHz bandwidth. He says that during the evenings this beast takes over a whole band and is heard as far away as Europe and South America.

Already, some SWL’s have nick-named the noise a "swooper" because it sweeps quite fast making a "swoop" noise as it goes by in SSB. Others have called it the Windshield Wiper Network, which they say is very apropos. (DXLD, CGC Communicator with “Swooper” audio provided by Mark Fine).

**

Why do some races occur with contestants lining up next to each other,
but they are competing against the clock?

Why do people go for the law of averages?

Why do you continue? Why are you even alive at this point?

The questions can roll on forever

and measure the results with a field
> strength meter on a calibrated range?

Not many people have access to a calibrated range with CB radio equipment.

Not many people have field strength meters that are calibrated.

What are you going to calibrate it against?

If you truly wanted to measure
> the ERP of two transmitters for comparison, you would not key both
> transmitters at the same time.

Why? We do. Please don't tell us what we do, when you have no idea from
lack of participation.

You would key each one separately, and
> measure each one separately.

No, we would do what we do, because that is how it is done.

It seems to be working for us, as nobody but you is bitching so
far.

>
> >>Since the goal is to jam, then why not used some

>
> Then why are the two mobiles keying at the same time?

To see who can deal with a variety of factors, but the bottom line is

To see who can throw the larger of the 2 signals out, competing one against
another in a bracket type elimination system.

Try drag racing? Why do they line up next to each other. Seems it would be
a HELL of a lot safer, and a LOT less distraction to just have the drivers
race
against the clock, huh Aaron? After all, the person with the quickest ET
would be
the winner, right?

Certainly the
> 'effect' of one mobile interfering with another is a distraction that
> someone seeking to measure ERP would seek to avoid.

If that where the only criteria, however it isn't.

People also would like to test their amplifiers and setups with the
disruption of
a strong near field, change antenna patterns, etc.

Why does any contest type activity that uses bracket style elimination
do so, Aaron?

>
> >Remember, they are the same as amateur contesting, seeing who can

> >to control "there precious area of
> >spectrum"...
>
> Never heard of this.

Of course you wouldn't. Your not an amateur operator, your not active with
them
and you haven't an idea of what your talking about, other than trolling.
This has been
proven MANY times.

Your a reader of the AMPS reflector. Go look at the posts the Italians
where putting
up 2 CQWW contests (mebbe 3) ago, and see what they thought of the American
stations. Or the others talking about American Armchair Contesters saying
the
same thing I did.

Although there IS a certain type of op that
> delights in creating malicious interference, they are in the minority.

lol.

How do you know Aaron? Remember, your not an active radio op in the
amateur arena. If you hang with them, please provide call signs so they
can be contacted to prove your claims.

Otherwise, your nothing but a blowhard on a vendetta, and any type of
information you dessiminate should be taken as such.

> It must be the gang YOU hang around with, Toll.

Actually, it isn't. These are on the air remarks I have heard. I don't
"Hang" with the amateur community per se.. I hang with friends, no
matter WHAT radio service they choose to operate on / in.

Do you guys get
> together and swap tall tales about "controlling the frequency"? LOL.

Do you and your alter egos get together and talk about your assinine
attempts at control?

Again, if 2X2 elimination is so unworthy of use, why IS it used in so many
different arenas?

Oh yeah, your just full of shit, as usual Aaron.

Have a good one. You tried, and failed. Miserably. As usual.

>>Why do some races occur with contestants lining up next
>>to each other, but they are competing against the clock?

In the case of track meets, the runners stay in separate lanes. In the
case of horse racing, they try and avoid contact with each other. Same
with auto racing. The intention is not to interfere.

In football, prize fighting, and other 'contact sports', the intenion
IS to interfere with the other player. Same as in keydowns - the
intention IS to interfere.

>>Why do people go for the law of averages?
>>
>>Why do you continue? Why are you even alive at this point?
>>
>>The questions can roll on forever

They sure can, but I'm not asking those questions. You are. I say
keydowns are based on intentionally interfering with another station.
You say it's not - and then come up with some lame doubletalk about
contestants lining up next to each other. Surely anyone can see
through your BS. I can.

> >and measure the results with a field
> >strength meter on a calibrated range?

>>Not many people have access to a calibrated range with CB radio
equipment.
>
>>Not many people have field strength meters that are calibrated.

They seem to have access to bird wattmeters, dynamometers, and a host
of other specalized (and not inexpensive) electronic gear. They can't
afford a simple field strength meter?

>>What are you going to calibrate it against?

Gosh, Train, YOU'RE the engineer. Go read up on how the pro's measure
ERP in a field test. You claim to be a "pro", right? Heck, even
'amateurs' have successfully conducted mobile antenna 'shootouts' and
come up with gain figures that accurately rate one mobile setup
against another. They test each mobile separately. And they do it
LEGALLY too.

> >If you truly wanted to measure
> >the ERP of two transmitters for comparison, you would not key both
> >transmitters at the same time.

>>Why? We do. Please don't tell us what we do, when you have no idea

That's true, I wouldn't want to openly thumb my nose at the FCC like
you idiots do.

> >You would key each one separately, and
> >measure each one separately.

>>No, we would do what we do, because that is how it is done.

No, you REFUSE to do it any other way. And the way you do it is to key
over another station. Hence, the purpose of keydowns is to
intentionally interfere with another station. I rest my case.

>>It seems to be working for us, as nobody but you is bitching so
>>far.

The FCC says it's illegal. I'd say that's "bitching".

>
> >>Since the goal is to jam, then why not used some

As mentioned above, the drivers goal is to make the fastest time. It's not to intentionally interfere with the other drivers. But maybe YOU see competitive sports that way - as an opportunity for intentional interference, hm?

> >Certainly the
> >'effect' of one mobile interfering with another is a distraction that
> >someone seeking to measure ERP would seek to avoid.

>If that where the only criteria, however it isn't.

Oh so now you're changing the criteria from what you originally said. You said it was a contest to measure ERP.

>People also would like to test their amplifiers and setups with the
>disruption of a strong near field,

"Disruption of a strong near field"? Isn't that another way of saying it's a contest to see who can intentionally interfere with another mobile? (It's called "jamming", Toll)

> >Remember, they are the same as amateur contesting, seeing who can

>IS it used in so many different arenas?

Sure, 2 x 2 elimination can happen with the competitors making separate "runs", or they could "run" together on separate tracks. However keydowns don't operate that way. The contestants INTENTIONALLY INTERFERE WITH EACH OTHER. Like football. Or prize fighting. (Only difference is those sports are LEGAL. Yours is not)

>Oh yeah, your just full of shit, as usual Aaron.
>
>Have a good one. You tried, and failed. Miserably. As usual.

LOL. Are you gonna claim I used 'semantics' - and then run away like
you did with Sparkey? :)

Seems to me that in my previous post I asked you some very pointed
questions. As little braniac power as it took to provide that answer to
Train should have left you plenty to deal with me. Where's the answers
Aaron? I figure you've had plenty of time to conjugate another one of your
sterling replies.

VERY poor cover for you inability to even remember who for fighting with
loser!
It's been slow in the NG lately so I took you out of the killfile for a
little while.
You're usually good for some comic relief.

If I didn't know the difference between the CB and HAM camps, I do now ;-)

Thanks Richard, James and Bob for your postings. I am enlightened!

> Face it, he's bootlegging on 440 mhz and he's got three HAMS (Doc,
> Jerry and Dick) politely helping him to do it.

Don't worry Aaron, I mostly use them in the French alps, so little
chance of my interferring with you in the US of A. They get used on the
same frequencies as Motorola's Talkabout radios (around 446 Mhz), as
that's what my mates have got - my understanding is that various governments
around the world have freed up that frequency so's companies like
Motorola can create products for a global market place.

Okay..... I'm gonna tell this ONE time and ONE TIME
ONLY!

The Original President Jackson was manufactured by the President Radio
Company (who's the second cousin twice removed of the Uniden
Corp.....) It was intended for the U.K. Somehow, someone was
importing them into the USA... anyhow... A company in Fl, was making a
"Copycat" of the Jackson Called the SuperStar JA. This pissed off
President and they pulled thier line and moved thier operations
overseas.

Well.... Speed ahead 10 or so years... The guy making the SS-JA got
busted and went out of business for a while... and the market was
demanding another SuperStar Jackson and so, President decided to bring
back the Jackson to the USA Market. (although it's a black faced
version)

Nowdays, There is a President Jackson, and a Superstar JA... The
Superstar JA is a cheap rip-off of the Original and should be avoided
like the plague!

The President Jackson however is a nice radio.

Take it from someone who knows...

812. SIGNS YOU LIVE IN THE YEAR 2002

Newsgroup: rec.radio.cb
Date: 2002-02-11 12:45:42 UTC
From: arcweb@bnnorth.net
Message-ID: <3c67bc08.2310582@news.bright.net>
Source record: 115122

SIGNS YOU LIVE IN THE YEAR 2002...

1. You just tried to enter your password on the microwave.

2. You have a list of 15 phone numbers to reach your family of three.

3. You call your son's beeper to let him know it's time to eat. He emails you back from his bedroom, "What's for dinner?"

4. Your daughter sells Girl Scout Cookies via her web site.

5. You chat several times a day with a stranger from South Africa, but you haven't spoken with your next door neighbor this year.

6. You check the ingredients on a can of chicken noodle soup to se if it contains Echinacea.

7. Your grandmother asks you to send her a JPEG file of your newborn so she can create a screen saver.

8. You pull up in your own driveway and use your cell phone to see if anyone is home.

9. Every commercial on television has a web-site address at the bottom of the screen.

10. You buy a computer and 6 months later it is out of date and now sells for half the price you paid.

11. Leaving the house without your cell phone, which you didn't have the first 20 or 30 years of your life, is cause for panic and turning around to go get it.

12. Using real money, instead of credit or debit, to make a purchase would be a hassle and take planning.

13. Cleaning up the dining room means getting the fast food bags out of the back seat of your car.

14. Your reason for not staying in touch with family is that they do not have e-mail addresses.

15. You consider second-day air delivery painfully slow.

16. Your dining room table is now your flat filing cabinet.

17. Your idea of being organized is multiple-colored Post-it notes.

18. You hear most of your jokes via e-mail instead of in person.

19. You get an extra phone line (or a ADSL/cable modem) so you can get phone calls.

20. You disconnect from the Internet and get this awful feeling, as if you just pulled the plug on a loved one.

21. You get up in morning and go online before getting your coffee.

22. You wake up at 2 am to go to the bathroom and check your E-mail on your way back to bed.

23. You start tilting your head sideways to smile. :)

24. You're reading this.

25. Even worse; you're going to forward it to someone else

What's funny Tim is your ignorance on the subject. I provided a point by
point argument to disprove your limited experience, all backed up by solid
fact and data, and I included the source for reference by anyone to check
for themselves too.. The only thing you have offered in rebuttal is flippant
remarks to hide your lack of knowledge, just like Twsited does.

It's a plain and simple fact Tim. There are more CBers than licensed Hams, and many Hams get a bad rap from CBers running dirty amps etc. All that required is a tiny percentage of CBers to cause problems, and by the huge numbers of CBers out there that can turn out to be a significant problem.

> there has been enough TV publicity about ham
> radio and cb to where people know there is a difference.

And this is coming from somebody whose "CB Radio", a Yeasu FT-840 at one time, a well know Ham rig. And you still can't figure out why people are confused?

>if they see you
> driving down the street with a antenna or in your house with one they might not
> know the difference by sight but if you took 10 seconds out of your day to
> explain they would know. remember, just about everybody over 30 has talked on a
> cb at least once back in the 70's

I have a lot of people asking me about the antennas on my van. Most people don't have a clue what the difference is between a Ham Radio operator and a CBer. In fact I now keep some public relation material packets printed out from the ARRL web site, and some Ham equipment manufactures brochures, in my van to hand out when people do ask. It saves a lot of time trying to explain the differences.

So spend a moment and share your so-called specs with the group. You have
wasted more time playing Twisted's game of "dodge the question" than it
would have taken to answer it.

That was a point I was trying to get across to the resident, and self
proclaimed CB tech expert - Tim Nepo. It is all a question of the deviation
ratio used, which he by the way doesn't seem to have a clue what it means,
much less what the consequences of changing it are.

this.

Like I said others here don't agree with you. Second why don't you explain
why what I said is wrong by using some solid technical reasoning. That would
be far more convincing than anything else.

curve
> ball in there

It wasn't a curve ball Tim since there is a option to use different
deviation ratios depending on the band. Some rigs you have to manually
select which one by a button press or a menu selection. That was the thrust
behind my question asking you what was the deviation being used. Use the
wrong one, or screw up the one you have by equipment mods, and there is
going to be problems. And I'll bet until this subject came up you didn't
have a clue about the consequences of using different FM deviation rations,
and the relationship they have to signal bandwidth.

No, the intention is the safety of the other participants. I suggest you
go read some sports history before you spout your keyboard off.

>
> In football, prize fighting, and other 'contact sports', the intenion

> intention IS to interfere.

No, it isn't to interfere, it is to show whom is the stronger or
who has more stamina, etc.

Their is no sport where the intention is to "interfere". As a matter
of fact, the sports you list as being driven by interference I could
find no definition of that listed interference as the main goal or
objective.

Please try again, Aaron.

Well sure they can, but if its unnecessary for the hobby the way it is
now, then why change it, because YOU don't like it?

Give me a break.

Expensive Bird Wattmeter? 200 dollars is not expensive by any means.

Dynamometer? What woudl that have to do with RF?.

>
> >>What are you going to calibrate it against?
>
> Gosh, Train,

This is Toll, not train. I suggest you learn who you are talking TO,
as well as learn WHAT your talking ABOUT.

So far, you haven't a clue as to what your talking about, since you
admittedly don't participate, and have no amateur license, but yet
you purport to know all about amateur laws and operating
practices.... Hell, you don't even know who your debating with
this time.

Time to go to sleep Aaron. You have been awake WAY too long.

YOU'RE the engineer. Go read up on how the pro's measure
> ERP in a field test. You claim to be a "pro", right?

Where did TOLL_FREE claim that? This is Toll, not Train.

Heck, even
> 'amateurs' have successfully conducted mobile antenna 'shootouts' and
> come up with gain figures that accurately rate one mobile setup
> against another.

Somehow I believe you actually meant to go somewhere with this.

However, the point is lost somewhere.

They test each mobile separately. And they do it
> LEGALLY too.

So do some CBers. However, the point of a shootout isn't to see who has
the best antennas, it is to see who has the best OVERALL setup. This
is a point that seems to get lost with you.

>
> > >If you truly wanted to measure
> > >the ERP of two transmitters for comparison, you would not key both
> > >transmitters at the same time.
>

So you admit you don't know what your talking about then.

>
>
> > >You would key each one separately, and
> > >measure each one separately.
>
>
> >>No, we would do what we do, because that is how it is done.
>
> No, you REFUSE to do it any other way.

No, people don't. It used to be done with all sitting on a line, and the person
heard won. Before that, yes, people used field strength meters.

However, it has been found that the person with the highest ERP will
be the person heard.

Taking ERP measurements with test equipment turned out to be redundant
and slow, when someone sitting on the other end of a radio could do the
same thing, AND HAVE AUDIBLE PROOF via the "watergate" tape recorder,
to eliminate or cut down on the cheating.

YOU show a better way, and people will use it. For now, you haven't. You have
shown that you don't participate, haven't participated, and haven't a clue as to
what really goes on.

And the way you do it is to key
> over another station. Hence, the purpose of keydowns is to
> intentionally interfere with another station. I rest my case.
>
> >>It seems to be working for us, as nobody but you is bitching so
> >>far.
>
> The FCC says it's illegal. I'd say that's "bitching".

No, that isn't the definition of the word bitching. YOUR bitching.

The FCC hasn't bitched about it being illegal. I suggest you learn
the terms you use before you try and use them in sentences.

www.dictionary.com would go a long way to helping you do so.

> interference, hm?

Nope, and your definition of boxing and other "intentional interferience"
sports
isn't listed on any other authority either.

Guess that proves your full of shit? Or please provide a reputable
reference
that shows boxing as an "intentional interferience" sport.

>

> >
> "Disruption of a strong near field"? Isn't that another way of saying
> it's a contest to see who can intentionally interfere with another
> mobile? (It's called "jamming", Toll)

No, that would be "Disruption of a strong near field". Amplifiers,
antennas,
complete setups act different with a near field present. How would you know
how your system will operate if you never use it like that Aaron?

Please provide a reputable link that shows the definition of jamming is
"disruption by a strong near field".

>
>
> > >Remember, they are the same as amateur contesting, seeing who can

> However keydowns don't operate that way. The contestants INTENTIONALLY
> INTERFERE WITH EACH OTHER. Like football. Or prize fighting. (Only
> difference is those sports are LEGAL. Yours is not)

OK, Aaron, lets use your logic.

Why is interference considered a foul in the football and boxing arenas, but you
keep telling us that is the point of the sport?

>
>
> >Oh yeah, your just full of shit, as usual Aaron.
> >
> >Have a good one. You tried, and failed. Miserably. As usual.
>
> LOL. Are you gonna claim I used 'semantics' - and then run away like
> you did with Sparkey? :)

I NEVER ran from that idiot. I had computer problems with the ISP, and when the problem was repaired, I returned.

I just claim your an idiot. You provide the proof of that.

Now tell us Aaron, why is it that:

1. You call boxing "> In football, prize fighting, and other 'contact sports', the intenion
IS to interfere with the other player", but yet both of those sports interference is listed
as a foulable offense?

2. How can your purport to tell us what keydowns are all about when you admittedly
have never been involved in one, have never set one up, and have never operated a
station in one?

3. How can you forget to add the text in your reply about amateurs admittedly jamming
others in contesting?

4. How come you forgot to tell us who your amateur friends are that you gained your
radio experience from, since you like to tell us about how amateurs do it so much, you
MUST have SOME experience, first or second hand.

When you answer all these questions with HONEST answers, that are actually ON TOPIC
for them, then we can continue. Otherwise, your just trying to shove something down someone
elses throat because you don't like the way someone else operates equipment they purchased.

leland, we all knew it was nbfm that works fine in 10khz spacing. it was you who claimed it would not work when in reality it is being used daily. backpeddle all you want. i'm no tech, just a experienced HF operator. you continue to compare you vhf/uhf operations to cb toime and time again even though you keep looking silly.

>That was a point I was trying to get across to the resident, and self
>proclaimed CB tech expert - Tim Nepo. It is all a question of the deviation
>ratio used, which he by the way doesn't seem to have a clue what it means,
>much less what the consequences of changing it are.

i'll tell you the diviation listed in these four manuals when you agree to admit your wrong. leland, theoretically speaking if i was to tell you all four of these export rigs had 2.5khz listed as the max fm deviation would you then admitt to being wrong about these same radio being unable to work fm just fine in a 10khz channel spacing or will you still dodge this post and never admitt to being wrong? see whats funny is you made the claim about FM on 11 meters without knowing at all what deviation we use. how you did that i'll never know.

go back to the comments of Brainbuster who is a ham & cb'er from the UK and who uses 11 meter FM on a 10khz channel spacing daily with no problems. the only other people i seen that said it would cause trouble were those discussing misaligned radios or rigs that are malfunctioning in which case they would cause trouble on any mode and is a a symptom of that particualr radio and not the mode.

Toll,

What you said below is quite true. If you have listened to the 10 meter repeaters "banging"
into one another, it is a good illlustration. I can only stand to work 10 meter FM for about
15 minutes because of the selective fading, and the jangle of signals. After that, (15 minutes),
it's off to greener pastures.

Jerry

Plenty. It at least showed you don't have a clue about what you're doing since you couldn't answer a simple question about the equipment you use, and still can't. 8-))

> plain and simple nbfm works fine with 10khz spacing on 11

What is plain and simple Tim is you're just pain ignorant about the operational characteristics of the equipment you use. I guess I shouldn't be surprised since you're an "appliance operator" like most CBers. Just flip the switch and yack in to the mic until somebody pounds on your door with a complaint.

I covered both cases, where there can be interference, and where there is likely not to be any. However which case you have is VERY highly dependent on the FM deviation being used. There are two others on this group who also agree with my points as well. Not only that but one had personnel experience with interference in one case, while the other agrees with the technical analysis. All I get from you is hot air, a lot of arm waving, and excuses.

Only the really funny ones. Besides I don't believe a word of his crap
anyway like you do. He was after all the self proclaimed "EXPERT" at reading
so-called news post headers. And after he had his head handed to him a few
times by a few others on the group showing his mistakes he persisted in
continuing to make more miss identifications, after which you picked up the
ball, and continued his mission.

Fine so here is his comment from 2/10/02 at 6:45 AM:

"In the UK, With FM,
splattering is common - with SSB, poor bias, carrier balance and osc
frequency adjustments are common. AM CB is hardly used in the UK now, so
"swing" is not an issue here."

From your constant screwing around, and evading the question, I'm convinced you didn't even know that a difference in frequency deviation even made a difference did you? Further you can't even guarantee that every CBer is using the same frequency deviation. Like I said some rigs you have to manually select the one to use.

I can tell one of two things Tim. One you either didn't read the post where I explained in detail what happens when using different frequency deviations. Or you can't read and understand simple tables, charts, and can perform some simple arithmetic.

No you didn't Tim otherwise you would have just said so from the very start.
But you couldn't because you didn't know. And by the way nbfm is interpreted
to be using different frequency deviations depending on who you talk to.

It's still a rock solid claim Tim. Nothing has changed except how you want to interpret what I wrote. And you still can't answer a simple question the first time around about the equipment you use because you're like most CBers, nothing more than an appliance operator. Flip the on-switch, and yack in to the mic. Not that it's a bad thing because the aim of CB Radio is for those who want to use radio and don't want, or can't understand, what goes on under the covers.

You have the proper number of alternators... Hence you can use a cap bank.

Try to do it with one alternator on that cap bank. Your gonna kill it in no time.

Actually, for locomotive use, presto-lite makes alternators in the 32 and 48 volt variety, not 12 volt.

The 325 amp presto-lite / leece neville alternator is designed for motor homes/ motor coaches / buses / off highway and emergency vehicle use.

The model number you where referring to is the 2200, I believe. It will put out well over 12 volts, and well over 325 amps... However, it is known as a crank snapper, since it has sent so many small block chevy cranks to the steel pile. Hard to turn.

The bigger deal is at this time, nobody cares, Aaron.

The legal operators disassociate themselves with you because of your Hitleristic tactics.

The illegal operators disassociate themselves with you because you have different feelings than they about a subject.

The general population disassociates themselves with you because.... Well, because your an asshole.

Yes

The Glenn 303 was the CB version.

The Glen 326 series would let you use them on almost any radio, and would
tune from 40 to 10 meters, if I recall (on the digital readout).

They where intended to be used on amateur equipment that used XTAL tuning,
thereby updating them to at the time somewhat current standards.

Glenn... The same people that brought you Golden Falcon, Loudmouth and the
basic design that Galaxy raped for those 8908 amps so prevelant in the 80s.

866. Why Keydowns Suck (Editorial)

Newsgroup: rec.radio.cb
Date: 2002-02-11 19:43:17 UTC
From: voobner@yahoo.com
Message-ID: <fbc7a2.0202111143.39b9ce57@posting.google.com>
Source record: 115231

(More anti-keydown websites growing every day!)

Editorial Opinion
by Doug Smith

Cherokee Driver
Unit 9830
ï¿½
-----The Keydown - The Ultimate Abuse of CB Radio------

"CB Web and Popular Wireless Magazines encourage you to notify the Federal Communications Commission if you are aware of a scheduled Keydown happening in your town."

There is an abuse of CB radio taking place that many probably wouldn't believe if you told them about it. A small number of high-power junkies hold tournaments they call, "Keydowns." CB enthusiasts that run in the tens of thousands of watts of power - illegally of course - meet in communities all over this nation to challenge each other. The winner is capable of transmitting with the greatest amount of radio frequency energy than all of the other competitors.

These clowns have taken the illegal CB power amplifier several steps beyond what you might expect. To achieve power levels like this automobiles must be outfitted with multiple batteries, several heavy duty alternators, and antennas capable of handling thousands of watts of power.

These events are often sponsored by the pirate radio shops that sell the equipment the competitors use.

Why?

The magazine is taking an active interest in exposing and high lighting this illegal activity. I believe that the misguided souls that participate in these events are horrific examples of the types of abuse that are responsible in part for the decline of CB radio. This extreme unlawful activity is the CB pirate's way of legitimizing his or her unlawful behavior. The operation of mobile radio transmitters, often tens of thousands of watts more in power than a typical LEGAL Amateur Radio operator, has the potential to interfere with everything and anything.

You can hear many of these clowns on CB channel 6. They tend to congregate on channel 6 so they can impress each other with their signal strength as they talk across great distances.

We think that after you have read more about Keydowns, and the culture that promotes the competitions you will want to do something about them if they occur in your area. CB Web and Popular Wireless Magazines encourage you to notify the Federal Communications Commission if you are aware of a scheduled Keydown happening in your town.

Want more information about Keydowns? Visit the newsgroup rec.radio.cb to learn more. Proponents (known as Key Clowns) and opponents (known as Anti-Key Clowns) debate the merit and lack of same at this Internet location. The Key Clowns read Internet sites like Keydowns.com.

I cannot think of a riskier, more wasteful, or more foolish activity than building an illegal thirty thousand watt mobile radio system that one uses on CB to say, "You got the Big Banana in Nawlins, give us a comback ya'hear?"

Why?

i think you guys are full of shit.

-It's a plain and simple fact Tim

Elaborate if you can without going off topic.

-There are more CBers than licensed Hams, and many Hams get a bad rap
from CBers running dirty amps etc.

Look in the mirror. YOU are a prime example of why some hammies get a
bad rap, not cbers. Abdication of personal responsibility is a common
trait of yours.

- All that required is a tiny percentage of CBers to cause problems, and
by the huge numbers of CBers out there that can turn out to be a
significant problem.

All that is required is an attitude like yours and it can, and often
does, reflect on amateur radio operators as a whole. You are truly a
blight to amateur radio. Has it ever occurred to you that with all your
self-elevated bullshit you profess concerning anything radio related, no
one ever really seeks your input, (replying to yourself doesn't count)
but almost every other hammie that partcipates here gets questions posed
to them on a regular basis? Wonder why that could be, Lelnad? Oh, that's
right,,everyone's illegal but you so that's why.
What's more, most of them respond in an adult and civil manner. The
truly technically able among us don't feel the need to shout their
knowledge and expertise from the rooftops and belittle those who may not
know something ...they willingly and gently lend a hand. Constantly
belittling of those who disagree with you serves only to disguise
personal doubt and low self-esteem.

--there has been enough TV publicity about ham radio and cb to where
people know there is a difference.

-And this is coming from somebody whose "CB Radio", a Yeasu FT-840 at
one time, a well know Ham rig. And you still can't figure out why people
are confused?

You're the only one confused and freaked out to the paranoid point that
someone may mistake you for a cber..the majority who are of light years
ahead of you on the evolutionary ladder.

--if they see you
driving down the street with a antenna or in your house with one they might not know the difference by sight but if you took 10 seconds out of your day to explain they would know. remember, just about everybody over 30 has talked on a cb at least once back in the 70's

-I have a lot of people asking me about the antennas on my van. Most people don't have a clue what the difference is between a Ham Radio operator and a CBer.

Given your disdain, attitude, accusations, lies, and personal conduct toward cbers, I can see why this upsets you. What perplexes me is why you try so hard at being a cber.

-In fact I now keep some public relation material packets printed out from the ARRL web site, and some Ham equipment manufactures brochures, in my van to hand out when people do ask.

Not one person here doubts that, I assure you. Sad fact is, you probably act like your nocode is an accomplishment to those poor unfortunate souls that do ask you anything about your limited allowance capabilities.

-It saves a lot of time trying to explain the differences.

Amazing are the mundane things you choose to spend your time on, such as arriving at a satisfactory conclusion that a complete stranger may now differentiate between your purchased nocode ticket and a cber.
The "difference" that you appear to be obsessing on, is that most cbers (at least on this board and the ones I talk to) are of higher standards and treat people better than you were taught to employ.

While mine is something of a minority opinion, do not in any way shape or form combine the rf ground with the electrical ground. So long as the equipment is connected to a good earth ground from the antenna connections or directly, I would even use a cheater to evade the third pin on the plug to the distribution strip I will assume you are going to use to power all the thingees.

I have seen far too many cases where the wiring was the transmission medium to RFI and you are asking for a first-class ground loop. Also I believe the electrical code prohibits such things as combining grounds.

you provided alot of data about something else than what we were talking
about. how did that help?

-Plenty. It at least showed you don't have a clue about what you're
doing since you couldn't answer a simple question about the equipment
you use, and still can't. 8-))

plain and simple nbfm works fine with 10khz spacing on 11 meters when
you said it would not. you were the incorrect one. why is that so hard
for you to admitt?

What is plain and simple Tim is you're just pain ignorant about the
operational characteristics of the equipment you use. I guess I
shouldn't be surprised since you're an "appliance operator" like most
CBers. Just flip the switch and yack in to the mic until somebody pounds
on your door with a complaint.
I covered both cases, where there can be interference, and where there
is likely not to be any. However which case you have is VERY highly
dependent on the FM deviation being used. There are two others on this
group who also agree with my points as well. Not only that but one had
personnel experience with interference in one case, while the other
agrees with the technical analysis. All I get from you is hot air, a lot
of arm waving, and excuses.
-
What YOU get is insignificant to anyone and inconsequential. What the
group received was an entertainment session by an enterprising young man
giving one who constantly professes incorrect bullshit an education.

Try it and see. It should not have an effect on either if you get them far enough apart and six feet should do the job easily. As the big stick is I believe radialless you might get some coupling but wind about four turns of the TV coax onto a Mac and Don's coffee cup in the TV leadin and it should pretty well choke it off.

Source record: 115240

Jason,

1. Yes, use a seperate 'station' ground. Don't rely on only the
'third' wire for grounding.
2. I wouldn't. Although, it may be required by 'code' depending
on where you live.
3. Yes, see #1, and connect equipment to a central ground point
in the shack. The low-pass filter doesn't need to be
encluded.
Then a heavy cable to the ground system outside.
4. Single ground rods seldom provide adequate grounding for
anything,
multiple ground rods, or better yet, a ground radial system is
much better.

The absolute best thing to use against RFI is distance, either
'side ways' or 'up'. Next best is to make sure your transmitter
doesn't produce spurious emissions (clean). Then adequate
grounding,
shielding of affected devices, and by-passing. Some combination
of all of these things will usually 'cure' interference problems.
There are some RFI problems that can not be 'cured' from your
end,
but have to be 'cured' on the recieving end. Those are the worse
kind of RFI problems because you have to convince the owner of
the
devices that their 'stuff' is defective, and it's ~their~
problem.
Good luck...

> Radio Shack Base antenna (1985-Blue)

Dump this antenna. I'm surprised it hasn't rotted away already. A local guy has one that's just about shed itself to nothing. He's had it on his roof for several years. Heck, he rarely has to pick up fiberglass from the backyard anymore. :-) It is a bleed-over stick. You do not need to run any amplifier on this system to talk to your immediate neighbors every time you key up. Try a MACO V58, heck, even an Antron. You can get them pretty cheaply.

> 10 Ft mast

You gotta get this guy up in the air! Your radiation pattern is going straight into all the various services (phone, electrical) that enter the surrounding homes. You don't mention if you are bleeding into the neighbors but I bet you are. With nothing more than legal power.

> Grounding from mast to ground rod with solid copper #6.
> Ground clamp on base and rod.
> 8Ft copper type grounding rod.
> Radio Shack RG-8 25 ft coax.

Crappy coax. Spend the extra $ and get some good stuff. 25 ft should be pretty affordable. You can get a length of good coax already made up with ends, any length, from Bill's 2-way or Copper Electronics.

> Low pass TVI filter
> RF choke at base of antenna

Good.

>
> If the power supply for my Cobra 28 is connected to a 3 prong grounded

> to connect all three grounding rods-and with what?

Overkill, IMO. You may, with this configuration, be setting yourself up for ground loops, etc.

It sounds like you've gone to a lot of trouble to set up a good station. Just don't think that overkill is always good. Sometimes the KISS theory is the way to go. :-)

Good luck!

Jeff

I agree, the grounding sounds ok. But NEVER underestimate lightning.
Several years ago we had one particular thunderstorm that I remember
well, because while it didn't sound like there were any close strikes,
I went out afterwards to check my garden for wind and hail damage.
Turns out I -did- have a strike in my garden, missing two large trees
less than 50 feet away, right past the power and phone lines directly
above, ignored the house and rain gutter just a few feet away, and
struck halfway up a 4' sunflower stalk which was growing right next to
a chain-link fence. Fickle stuff.

I'm back out.

> gchsbrown@hotmail.com

Jason,

It sounds like you have the antenna mounted from the ground up? If so, you might want to put it up a bit higher. If it is only ten feet off the ground, you're putting a very large part of your signal pattern into all the phone and electric service lines around you. Not to mention the wiring inside your house and the neighbors houses.

The grounding is ok and lightning shouldn't be a real problem at your height.

Ideally, all grounds would be tied together and a possibly a couple more grnd rods thrown in. However, the spacing between the ground rods will

determine how many more are sufficient. You don't want them too close together. I figure you're probably all right the way you are.

A mention about surge protectors. If you're gonna spend the money then perhaps a lightning protector on the bottom of the mast just above where it sits on the ground. This will help strip the lightning strike from the coax before it gets into the house. Naturally, you'll put a ground rod in there if not already done.

> 'Doc

Good afternoon Doc,

I asked this because I regularly see guys running ac type alternator equipment. When you run these external rectifier type alternators you can easily come up with 50volts dc.

I figured these (1) part= 1k+ output would be considerably easier to combine while reducing the amperage for a given output power. Just seemed considerably more expedient than dozens of transistors, the inherent matching issues and the sheer size of things. I do realize the expense of these higher voltage parts preclude their use to some degree but when you figure the use of at least one less alternator, slightly smaller wire, much easier matching/combing circuits perhaps they become economical.

I also asked because I'd like to experiment with a design around same and wondered if anyone had. I didn't want to reinvent the wheel if I could garner some tips from experienced experimentors.

Thanks BobC

Hmmm All I've garnered from this is a "dislike" of the practice. I haven't seen any evidence to support this practice as detrimental to anything or anybody. Anybody got any "factual" traceable evidence to support any fatalities or even "near misses" because of this practice?

Here goes Old Troll Free trying his semantics Game! If what you are saying
is true what is the safety factor at a keydown?
Who writes the rules? Oh thats right there are no Rules! Who is the
Sanctioning Body?

> > In football, prize fighting, and other 'contact sports', the intenion
> > IS to interfere with the other player. Same as in keydowns - the
> > intention IS to interfere.

> No, it isn't to interfere, it is to show whom is the stronger or
> who has more stamina, etc.

Again Troll Free tries to argue But is wrong, The object is to interfere
with the other team, to keep them from crossing a pre planned destination
(End Zone) In the words of the Immortal Troll Free stick to what you know
you Geek Ill bet you have never played a down of Organized Football in your
life. The goal is not to see who is stronger or who has more stamina that
would be a weighlifting competition or the Triathalon. The strongest team
doesnt alwyas win nor does the team with the most stamina. The team that
interferes with the others game plan is who wins. Football is about finnesse
as it is strength and stamina. heed your own words Geek!

> Their is no sport where the intention is to "interfere". As a matter

Bird Meters are more expensive than $200 More Bogus Information posted by
Troll Free, Just Like Leece Neville has a 325 amp alternator and not a 300
amp

> So do some CBers. However, the point of a shootout isn't to see who has
> the best antennas, it is to see who has the best OVERALL setup. This
> is a point that seems to get lost with you.

Yes, And the point of a shootout is to see who can Step on, Wipe out,
Squash, Drop the Maul, " Interfere with the others person signal so they are
not intelligable to a recieving station. The person who does this advances
to the next round and then the person who has interfered with the most
signals is judged the winner

>>Why? We do. Please don't tell us what we do, when you have no idea from
lack of participation.

Toll Free show us some pictures of you on the line since you are a avid
participant of the Keydown sport. Surely there has to be a few pictures out
there of you testing your ERP against someone else.

> So you admit you don't know what your talking about then.

When you do maybe Aaron will do the same. Until then all bets are off

> > > >You would key each one separately, and

Once again you refer to a publication only when it appears to lend
credibility to your agenda. The Pop Comm issue had record sales when it
contained the story that almost had you hospitalized.

Twisty, you cry for some references and when given you have an exucse for
them. Would he refer to a publication that supports your position? of course
not just like you cannot refer to any publications that says Freebanding is
legal, or doesn't hurt anyone or the freeband ison freqs abandoned long
ago. Why don't you supply a credible link to something that says the FCC and
whom ever the assigned freqs are abandonded between 27.405 to 27.999

Many other responses here and most are reasonable. One thing though. The ground rod you have installed for the radio should be connected to the residential ground rod using the biggest copper you can find--#1 bare copper is ideal. Connect between ground rods, and burying it would be just fine. Try to pay attention to the length so as to avoid resonant fractions of 11 meters. This will smooth out the electrical potential in the event of a nearby lightning strike. It has nothing to do with wiping out the neighbor's television. Lightning is not your friend.

TrainBuilt was doing some work with them but they were not allowed in competition. In a day of 12 volt mobile operation, the electrical system for these would mostly likely be a stand alone and be somewhat of a pain in the ass in most cars.
While running 50 volts would be very appealing because of the lower amperage required to produce the same output as a 12 volt device.....It's just not going to happen for the masses anytime soon unless the entire auto industry is planning a serious voltage change from the cars now being produced. This is not to include electric cars that are in production now or those on the drawing board. These cars would have little use for a device that would suck the batteries dry anyway as the range of those being produced today is very limited to begin with.

Source record: 115172

>(More anti-keydown websites growing every day!)

It's the same website that you brought to our attention a few weeks back. You remember, Aaron? The one that touts such an altruistic anti-illegal advertising policy.

"The Code <& they don't mean Element 1, folks. ;-p)

Not every CB-WEB advertiser and not every retailer subscribes to this code. In order for it to be more than just wishful thinking it is up to the rest of us to buy only legal CB radio products and to refuse to buy products that are not legal to use. if there is not market for the illegal products there is no interest in selling it. As a CB Web reader you may buy from retailers that sell gray market products but you buy only products that are legal to use in the USA.

Charges a fair market price for CB radios, equipment, and accessories.

Does not furnish customers with CB modification information.

Does not make modifications to CB radios for customers that would be illegal to use. e.g. out of band or higher power.

Does not sell, manufacture, or distribute illegal power amplifiers to CB customers.

Does not sell gray market radios intended for illegal modification.

See the GMRS Retailer code for additional items."

Hmm, let's see what's on special today?

"Last price update Jan 3, 2002
Amateur 10 Meter, Export Radios"

Cool, it's good to know that their prices are up to date...but wait, that doesn't read...no it couldn't be..."Export Radios?"

"Now Available, Channel Conversion Kits for Cherokee NR-100 and NR-150 Radios.
$30.00 Each

EXPO 100 EXPANDER KITS
Find the manufacturer and the model number in the list below.
Write down that model's Kit name [i.e. *S, +A, etc]
The Prices of each kit are different, so please match that kit with the price list.

Note:
"*" Indicates models that are ordered in high or low frequency ranges.
Example: S+ is High, S- is Low Frequency

Note:
A+ kit covers different frequency range than regular kits. (26.515 - 27.855)
Expands ordinary CB into an exciting world of upper and lower channels.
Includes frequency chart and easy step-by-step instructions. Expands most units
to receive 26.525 MHz to 27.845 MHz, unless noted. IC # or Crystal listed when
needed.

Disclamer:
These kits will expand the frequency range of the CB far beyond the 40 channels
allocated by the FCC. It is illegal to transmit on these frequencies in the
U.S.A. for class (D) CB Units. These kits are sold for receive purposes only,
and no responsibility for their illegal use will be assumed by the maker or
distributor. Installation is the sole responsibility of the user, and warranty
provided for the kit only."

Whew, I'm glad they put that disclaimer in...for a second I was afraid that
they were promoting illegal modifications.

Hey, what's this?

http://www.garlic.com/bills2way/modification/mod_texas_star.html

The title says "Texas Star CW Transmitter To RF Amplifier Conversion." You
don't think...nah, Doug'd never approve of that.

Gee, I think I'll look for a new 10-meter rig. Here's one.

"$438.99
RCI-6300F TB
AM, FM, Echo, 10-Khz Switch, Microphone Gain, RF Gain, 6 Digit Freq Counter,
100+ watts PEP, Variable Talk Back, Echo built in, S-RF-SWR Meter, Course and
Fine clarifiers, Very Nice Radio. Based on the newest EPT-990010Z surface mount
board."

Hmm, I don't really use AM or FM on 10--meters. I certainly don't need "Talk
Balk" of "Echo." What's that "10-khz switch" for? I think I'll pass and stick
to my Lincoln.

Thanks for the laugh, Aaron. This one hardly even registered on ye 'ole
Troll-O-Meter.

Jay, since you want to interject into someone elses post are you going to tell me with a straight face that when 10- 100,000 watt mobiles key up at these keydowns there are no side effects. It is business as usual for the operators of 25-30 Mhz and the harmonics of that 27 mhz signal? Jay you need to get out of the Desert Sun, or put that bottle down.

918. Re: 50 volt parts

Newsgroup: rec.radio.cb
Date: 2002-02-12 00:54:46 UTC
From: 'Doc <w5lz@icok.net>
Message-ID: <3C6867CB.AF7B12E@icok.net>
Source record: 115180

Bob,
If you can get the necessary 50 volts conveniently, I
think using a 50 volt transistor should work out very well,
both from the point of output power and lower current
consumption. The only problem is the 'conveniently' part
of getting the voltage.
From the standpoint of the average person driving around
in his 5-10 year old car, or even the latest model year car,
how many would be willing to modify their electrical system
to run an amplifier (or radio) with 50 volt transisters? I'm
not too sure I would, and I certainly don't have to worry
about a warranty on my 'junker'. I'm sure there would be a
market for an amplifier like that, but I doubt if it would
be a huge one.
Give it a shot, who knows, it just might make millions...
'Doc

How long until your WORK switches ISP's again? <g>

Your short term memory is failing you Twisted.
My work has never switched ISP's.

I know that. You just lied about it. Let's see, access servers to the
group from your work were through who, again?

You know Lithium salts, used to treat bipolar brain disorders, will do
that to you.

-No, I didn't know that, but I admit, I did accuse you of that disorder
once before. Thanks for clarifying.

You should consult with your shrink, have him/her schedule a blood test
ASAP,

-No reason for that, Nad. I never had sex with your ex-wife.

and get your Lithium level back to optimal. That way you may enjoy some
normal level of mental activity.

-I create my own activity, and most of yours as well.

I'm not wasting my time debating anything with you

-Aw, again?

since you can't remember anything correctly from one minute to the next,
much less from day to day.

-And here I thought it was your inability to stay on topic without
insult.

Gee, talk about Twisted having a major brain malfuction......

-Gee, I was right.

> Low pass TVI filter
> RF choke at base of antenna
>
> If the power supply for my Cobra 28 is connected to a 3 prong grounded
> outlet, do I still need to ground it?

Yes. The power supply may be grounded but the chassis of the radio may
not be. And you should ground your antenna mast (as another responder
suggested) with a lightning protection unit right at the base of the
mast. Also, for CB you want to get the antenna at least one wavelength
in the air, or at least 36 feet, for proper radiation.

> There is a ground rod for the electric service 14 ft from my antenna ground
> rod. Should I connect them together?

NO, NO, NO!!! Do NOT mix your RF ground with an electrical ground. You
risk creating a "potential", or voltage difference, between them. Your
RF ground rod should be a minimum of eight (8) feet long, longer if
your area is relatively dry. Connect to your equipment with the
largest wire (or braid) practical for your situation.

> Should another ground rod be placed outside the shack to ground power
> supply, radio, and tvi filter? If so, how do I connect grounding wire to all
> three(each is will then be about 15 feet from each other)? Will I then have
> to connect all three grounding rods-and with what?

Probably a good idea.

However, I'm a little confused here: Your power supply will be 15 feet
from your radio? The radio will be 15 feet from the TVI filter? Or the
radio gear will be 15 feet from the antenna mast? If the latter, run
that large wire (or braid) from one ground stake to the other. Any
hardware store or electrical supply house can supply what is known as
Transit Clamps (or grounding clamps) that will fit ground rods or
pipe.

Again, the question was....

"Anybody got any "factual" traceable evidence to support any
fatalities or even "near misses" because of this practice?"

Can you answer this question with a reply that is on topic, or not?

Of course, if a keydown is on channel 4, people aren't going to be able to
use channel 4 in their immediate area.

However, with the current state of the ionosphere, usually the problem with
local comms is the skip covering
people up, not the people using keydown time. Skip rolls in for a lot
longer than 10 seconds at a time, ya know?

So, can YOU give an answer to what was asked? Or just more conjecture?

-
Once again you refer to a publication only when it appears to lend
credibility to your agenda. The Pop Comm issue had record sales when it
contained the story that almost had you hospitalized.

-Twisty, you cry for some references and when given you have an exucse
for them.

I'm going against my better judgement here and responding to you 'cause
when you ain't drinking or doing whatever it is you do, you can often
add some insight. So far, so good.

- Would he refer to a publication that supports your position?

He has.
Look, he slammed Pop Comm for their journalistic efforts when they did a
thing about a keydown.
Not much longer he made a ridiculous statement concerning radio waves
that Pop Comm referenced having a possible effect on transmissions in
either the mideast or NY, (I forget which but it;s there for the
finding) and tried to link it to cb when the article said no such thing.
He took the statement completely out of context, intentionally, and
tried linking it to cb interference.

- of course not just like you cannot refer to any publications that
says Freebanding is legal,

Never claimed it was. Big difference.

-or doesn't hurt anyone or the freeband ison freqs abandoned long ago.

Many are, and even you are aware of this.

Why don't you supply a credible link to something that says the FCC and
whom ever the assigned freqs are abandonded between 27.405 to 27.999

_Do your own research. The freqs that are assigned, renewed, expired,
revoked, etc., are there for ez pickins.

I sure get a big kick out you thinking a public domain doesn't warrent people to interject a opinion, or in my case state the facts. Especially when they disagree with you. There's something wrong there. But your replies are amusing.

> are you going to
> tell me with a straight face that when 10- 100,000 watt mobiles key up at
> these keydowns there are no side effects.

I don't know, I haven't measured the field strengths at a keydown. You obviously haven't either.

> It is business as usual for the
> operators of 25-30 Mhz and the harmonics of that 27 mhz signal?

I'll help you out here on this one. The Harmonics will usually be -20, -30, -40, or even more dB down, not a concern. Also even harmonics will not show up on a wattmeter, do the math.

The fundamental may be of some concern. But short transmitting times, and the distances people are from the transmitter antennas, tells me the risk is significantly low.

Just slide on over to the next one, and introduce yourself, and measure the field strength, I am sure theres a few guys there that can show you hows its done.

> Jay you
> need to get out of the Desert Sun,

Yes I do, got a nice tan today, working out in the sun, and listening to the Zoo 2 meter repeater on 147.435 MHz. Oh yeah Rock n Roll 2, I can hear the oldie but goodie station out of Vegas.

> or put that bottle down.

Which one?!?!?!?!?!?

Still no factual evidence again..... I want to hear more about Electronic Countermeasures. You got the buzz words down, now lets hear some good stuff!

I did answer his question, you know what happens at and around keydowns. The CB Band is trashed, and who knows what else happens. I don't care if it is for 10 seconds at a time, that makes it all the more worse the interference is harder to pinpoint. These things last all day key after key with the interference getting worse as the day goes on. They start with the small amps then continue up in class until the Big Straps key this keeps the crowds around longer more money exchanges hands. You know there is no evidance that anyone could show you or prove You and your bunch of thugs roll into town create havoc and leave, no real good way to gather evidance someone complains the police, or whoever will look into it your already 1/2 way home. So don't tell me what doesnt happen were you the asshole filming at a keydown where the tape ejected from the RF. You wanna play smart any other time Troll Free why change your tune now. You know the full effect of all those Class C splatter boxes. Keep your mouth shut if you don't want to tell the truth.

Safety factor of what?

The participants? I would tend to lean a little safer than going 200 miles
an hour in
a door slammer down a drag strip. People have died doing that.

I have never heard of anyone, in the 15 or so years in participating or
judging keydowns, of anyone dying, either directly or indirectly.

> Who writes the rules? Oh thats right there are no Rules! Who is the
> Sanctioning Body?

The rules are posted on the flyers given out for each break. The rules are
stated before people sign up, and again they are made public before the
keydown event starts.

The sanctioning body would be the club that is hosting the event. Not
unheard of practice in other sports / hobbies / whatever as well.

Some CB clubs are also listed as upstanding members of community rosters
as well.

> (End Zone)

I'm still waiting for one of the Aaronittes to come forward with showing
what
the definition is from a reputable source.

Of course, they can't, since they are using something out of context.

In the words of the Immortal Troll Free stick to what you know
> you Geek Ill bet you have never played a down of Organized Football in
your
> life.

Played cornerback in Pop Warner for 4 years, and High School ball for a year
and a half. An injury put an end to what was a fun hobby for me.

The goal is not to see who is stronger or who has more stamina that
> would be a weighlifting competition or the Triathalon. The strongest team
> doesnt alwyas win nor does the team with the most stamina. The team that
> interferes with the others game plan is who wins. Football is about
finnesse
> as it is strength and stamina. heed your own words Geek!

If you look at football as a defensive game, I guess you could relate it to
the objective
being to interfere with the other team, but what about when you are on the
offensive side?

Having played football, I never looked at it in this regard. Called a
friend who played
college ball. He didn't either. He knew people that did.

So, its a case of whatever you want to call it.

The other view was that of conquering and overcoming. That's the one I
shared.

>

> And you Troll Free are a close second.

And I'm waiting for one of the morons of your camp to attempt more than anything to prove this as such to the general masses. So far, its your lame little
camp that believes it, and that's about it.

Of course, your camp consists of one, looks as many. It's the little things that give it away, though... The charismatic charms of people always
tell on them.

Stick to a single name. Worst thing to happen to the internet was these multiple
host / multiple personalities..... Gave schitzophrenics an entirely NEW medium
in which to play.

> Bird Meters are more expensive than $200

I payed 179.00 for mine. Please prove me wrong. They are commonly available at
breaks in the sub 200 dollar range.

If you purchase it new from some dealers, yes, its in the 270 - 280 dollar range. However,
even dealers have been known to mark down to the 200 dollar arena.

Try again.

More Bogus Information posted by
> Troll Free, Just Like Leece Neville has a 325 amp alternator and not a 300
> amp

The 300a alternator is an old case. If you would like, I will attempt to
get ahold
of sludgehammer and get a model number off a nameplate. Would take some
time,
however, as my stuff is still packed from the move.

Of course, this would be another argument of semantics. Most keydown people
refer to the 325 amp alternator as a 300A, since that was around FIRST.

> signals is judged the winner

One view.

The other is:

"The object of a keydown is to eliminate your opponent in a controlled
environment of side by side competition proving who has the station with
both the highest ERP in a certain direction, as well as who has the
equipment
that is able to stand up in the rugged environment in which it is being
used."

Of course, since you never go to a keydown, and have never participated,
we don't actually expect you to know what the hell your talking about...
But
keep talking.

>
>
> >>Why? We do. Please don't tell us what we do, when you have no idea

I have provided pics to others.

Ask the people who used to be in the newsgroup.

Ask the people who have talked to me on the bowl.

I wonder... How many have heard of you, much less competed agaainst you?

>
>
>
>
> > So you admit you don't know what your talking about then.
>
> When you do maybe Aaron will do the same. Until then all bets are off

lol.

I have done this in the past, my website reflects it (or did, hasn't been
updated in QUITE some time).

Besides, you don't step on someones toes and then get complain of getting
hurt feet when they stomp back.

You don't pose a question in answer to another.

The jury is still waiting on Aaron's answers. His little bitches coming to
rallie against me in his favor
does nothing for his cause, his stance, or his views.

Can you give us some facts instead of your opinion, we are not talking about what the watt meter reads
Which is it 20? 30 or 40 db a big difference from one to the other when you are talking 100 KW

> The fundamental may be of some concern. But short transmitting times,
> and the distances people are from the transmitter antennas, tells me the
> risk is significantly low.

Jay, who is talking about being near the antenna We are talking about tearing up the CB Band and beyond with Class C, over modulated splatter amps. Lets not forget when 2 of these guys key up there is double the power in the air

>
> Just slide on over to the next one, and introduce yourself, and measure
> the field strength, I am sure theres a few guys there that can show you
> hows its done.

Jay perhaps you should slide on over and see how its done, as you said you have never did it before. You know there is alot of RF in the air when your coax is unplugged from your radio and the little guys(2kw -4 kw) make your rf needle move without the radio being turned on.

> Still no factual evidence again..... I want to hear more about
> Electronic Countermeasures. You got the buzz words down, now lets hear
> some good stuff!

Yes, you have not provided any factual evidance to support your side of the arguement what ever it is your trying to argue?
I don't know anything about electronic countermeasures nor have I used that word in this NG ever. But perhaps Raytheon has taught you somethings about it that you would share with the group instead of that desert slang your slingin!

Safety concerns are present in ALL sports Toll. They are not the final
objective. For example, what's the objective in baseball? Safety? No.
Go look up what the objective is and then we can talk.

> > In football, prize fighting, and other 'contact sports', the intention

Let's examine what the dictionary defines as interference.

---
http://www.dictionary.com

interfere ï¿½ï¿½Pronunciation Keyï¿½ï¿½(ntr-fï¿½r)

1. To be or create a hindrance or obstacle: e.g. loud talking that interfered with the other patrons' conversations.

-Synonyms: interfere, meddle, tamper. Interfere implies action that seriously hampers, hinders, or frustrates. To come in collision; to be in opposition; to clash.

(Source: The American Heritageï¿½ Dictionary of the English Language, Fourth Edition)
---

*"Create a hindrance or obstacle". Hm. That overpowered, illegal "near field of RF" you mentioned previously certainly sounds like an obstacle to me. Moreover, it's a hindrance to the entire radio community. (But you guys don't care, do ya?)

*Wow..."loud talking that interfered with the other patrons' conversations". It doesn't take a genius to see how THAT applies to keydowns (because, after all, your LOUD radios interfere with other CB'ers!)

*"Action that seriously hampers, hinders or frustrates". Bingo! That one's a no brainer. I would say a 30 KW CB signal with distorted audio and harmonic splatter "seriously hampers, hinders or frustrates" (not only the other contestant -- but innocent radio users for miles around!)

*"To come in collision; to be in opposition; to clash". Hey! That doesn't sound like a car race. It sounds like a keydown. Or a boxing match. Or a street fight. My point is proven once again.

I'll repeat it again. Keydowns are based on intentionally interfering
with another station. If you do not understand that sentence please
contact an ESL teacher.

Toll, this is the english language we are dealing with here. If you
require me to post a website to 'back up' every analogy and simile I
use, you need to go back to high school and take some remedial english
courses. If you insist on websites to illuminate every statement we
make, you are gonna be in serious trouble, having made a number of
unsupportable statements yourself.

Here's only a FEW of your statements I could insist that you to
research and PROVE to my satisfaction before we continue:

*Not many people have field strength meters that are calibrated.
*The FCC hasn't bitched about it (keydowns) being illegal
*Amplifiers, antennas, complete setups act different with a near field
present
*contesters ADMITTEDLY jam other stations on nearby frequencies
*You (Aaron) are just trying to shove something down someone elses
throat because you don't like the way someone else operates equipment
they purchased

Exactly my point. A basic field strength meter costs LESS than 200
dollars.

>
> Dynamometer? What would that have to do with RF?.

Oh, sorry, I gave you turkeys more credit than you were due. I
naturally assumed people installing alternators would want to measure
RPM. Guess they just "eyeball" it, huh? LOL.

Toll, if people actually go read the reflector they will get to see an
embarassing episode in which YOU are the star. You received a sound
thumping from several hams who took issue with your attempt to relate
your knowledge of "CB linears" to the amateur hobby. You were so
ashamed of being a keyclown, you didn't even post your call.

I think the real definition of idiocy is one that you've provided by
your actions. Who else but a certified idiot would operate illegally
then BRAG about it?

>
>
>
>
> Now tell us Aaron, why is it that:
>
> 1. You call boxing "> In football, prize fighting, and other 'contact

> IS to interfere with the other player", but yet both of those sports
> interference is listed
> as a foulable offense?

THANK YOU for bringing up that concept! It proves that a keydown is
not an honorable or legitimate sport. In a legit sports contest,
intentionally interfering with another player is a "foul", correct?
Transmitting on top of another CBer is a "foul". In any sport when you
intentionally "foul" another player, you get tossed out of the "game".
I guess that's why keydowners are the losers and "outlaws" of the CB
and ham community. Foul. Outlaw. Losers. Makes sense, right?

>
> 2. How can your purport to tell us what keydowns are all about when you

You've never met me. You really don't know anything about Aaron
Voobner on a first-hand basis. You only know what you read in this
newsgroup. How can you talk about someone you know nothing about (me)

and have no real life experience to back it up? Explain that one.

> 3. How can you forget to add the text in your reply about amateurs
> admittedly jamming
> others in contesting?

A while back in this thread I said that SOME amateurs seem to enjoy jamming - and that they were in the minority. You're trying to make something out of nothing here, Toll. Grasping at straws? Just like you did with Sparky!

> 4. How come you forgot to tell us who your amateur friends are that you
> gained your
> radio experience from, since you like to tell us about how amateurs do it so
> much, you
> MUST have SOME experience, first or second hand.

My experience is the same as yours, Toll. I know hams, and I read QST, CQ, and many other ham pubs. Just because the particular "group" you hang with likes to operate illegally doesn't make it the majority. In fact, the printed matter published on ham radio to date suggests that guys like you are in the MINORITY.

> When you answer all these questions with HONEST answers, that are actually

> Toll_Free

Boy Toll, you suck at proving your point. You had better give up while you still can. That verbal beating that you took from Sparky left you weak and defenseless. Twistedhed makes more sense than you do (and that's not saying much).

> advantage or otherwise of "skip" zones. This equals long periods
(sometimes,
> but rarely, almost 24 hrs a day) of high level "noise". The noise level
> being high enough to require a minimum of a couple hundred watts to be
heard
> across the street. Literally.

*Sorry this is applicable when sunspot cycle is at or near its highest.
Besides, why are you changing the subject here? what does it have to do with
a keydown. There is already noise so lets add to an already high noise
level? No I don't think so If the noise level is that bad then the smaller
amps won't make the recieving station either that or the recieveing station
will have to be across the street.

> A keydown event lasting almost a day is broken into extremely short
segments
> (usually 10 sec.s or so) of low level and usually directionally focused tx
> operations interlaced with relatively long durations of silence. Much
later
> in the event is when the relatively few stations that can generate power
> into the multi kilowatt levels come out.

*How about the days leading up to the keydown and the day after as all the
suburbans and Vans roll out of town with there amps blarin rippin up the
band as the leave town. What do you consider much later in the event?
according to a keydown sheet posted on the wdc web site the 8 pill
competition is the 3rd contest, now they are capable of putting out 2kw
"Bird Meter Watts" according to the amp makers thats multi Kw's, it only
gets worse as I said they start small and overwhelm the area with stray RF.

Again the tx periods are extremely short and generally directional in
nature with the attendant long
> intermissions. It's my guess that if you totaled up the actual amount of
tx
> time there is a probability that it might last maybe a half to a third of
> the event. Is that a fair assumption?

*Listen you are trying to justify breaking the Law to me and it's not
working. it sounds like this .. well your honor we only smoke 1/2 a joint
so shouldn't it be 1/2 the fine?? We were only going over the speed limit by

10 mph when no one was around... Imagine someone trying to have a legitimate conversation then ever couple of minutes the reciever gets trashed.

> Now let's compare this to the "law abiding citizenry" of which you speak.

*Ok so you wanna try and compare legit Amateur radio to Illegal CB keydowns .. ok Lets go for it

> Several times a year the ARRL and several other entities host a 1or 2 day
> event (if not longer) called CQ something something sweepstakes..

*A 100% Legal Function!

>The FCC is admonished to turn a blind eye and deaf ear to the goings on because??

*Of course you do have proof of this right Please cite a reference or a reputable reference.

>Are these not also known as contests?

*Yes, see above, there are also beauty contests and Pig Calling Contests Your Point?

>During these contests all the respective bands are literally rendered useless on a continuous basis by thousands of
> individuals running hundreds to thousands of watts into a mix of non directional and somewhat directional antennas.

*The Bands may be crowded but they are not rendered useless, people arent intentionally stepping on others for the thrill of it.
Each operator must ensure his or hers signal is clean, do they do this at keydowns?
It is a event governed by the same FCC Rules that amateurs must follow day in and day out. again your point?

> Enough of these stations are running their equipment poorly or have some
> amplifier defect which is equivalent to any spurious found at a "keydown"
> event. The ionosphere acts on these signals in similar fashion as "skip" on
> the cb band with the exception that these same conditions remain intact thru
> all hours of the days and nights.(band dependant, naturally)

*Now you are really makin shit up they have a amplifier defect?or are running ther station poorly? Again can you provide some legitamate proof of your wild claims, Hell at the very least Toll Free would alos want you to back up your claim with something other than whats in your illegal mind!
Skip the ionasphere you are again shifting the topic and it has no relevance to the thread, your babbling now.

> These "contestants" however, do not limit their operation to a single
> frequency as is the norm for it's cb counterpart. Instead, entire bands

are
> pummeled and the interference makes it virtually impossible for the
> non-contestants to use it. In fact, there begins numerous "fights" between
> the contesters and the non-contesters in which the same vocabulary is
> evidenced as the "lowly cb operators".

There is nothing Illegal going on now is there. The band is crowded and
fights happen just as they do in a crowded parkin lot
TBut they still are not voluntarily breaking federal Law.

>
> Acting as a group or singly, these entities emit vocabulary consistent
with
> the aforementioned keydown practices in which 10 or more seconds will
elapse
> during a single ptt event. However, the frequency of these ptt events come
> much faster, more of a rapid fire in nature compared to the slower paced
and
> rather long intermissions provided by the "keydown" events.

*Who cares how a contest is run? thats the idea to talk to as many people as
possible, so how is the band useless there are many people communicating, it
is no different than being on a crowded street, you wait your turn,when it
is your turn you make the contact and move on, beside more importantly the
contests are legal, an amateurs transmitted signal must meet certain purity
specs, what purity specs do keydowns meet? And if so who is responsible for
it like a ham who gives his call sign??or a Cber who gives his ... Sod
Buster? Big Bird? ..

>
> So, what have we learned?

*You twist the subject, you spread false information with no way of backing
it up do we need to continue?

>
> How about there's considerably more energy, polluting more spectrum, for
> longer distances and longer durations during a "law abiding citizenry"
> contest than it's illicit counterpart?

*Says Who? At least you admit Keydowns are illicit.

> to affect you personaly before you care about it or do anything about it.
>
> Putz

A Putz you say,

Ok I'll run with this.

Lemme start by reviewing what has already been established.

The CB band is subject daily to a great deal of interference to local operations due to the enormity of stations all around the world taking advantage or otherwise of "skip" zones. This equals long periods (sometimes, but rarely, almost 24 hrs a day) of high level "noise". The noise level being high enough to require a minimum of a couple hundred watts to be heard across the street. Literally.

A keydown event lasting almost a day is broken into extremely short segments (usually 10 sec.s or so) of low level and usually directionally focused tx operations interlaced with relatively long durations of silence. Much later in the event is when the relatively few stations that can generate power into the multi kilowatt levels come out. Again the tx periods are extremely short and generally directional in nature with the attendant long intermissions. It's my guess that if you totaled up the actual amount of tx time there is a probability that it might last maybe a half to a third of the event. Is that a fair assumption?

Now let's compare this to the "law abiding citizenry" of which you speak.

Several times a year the ARRL and several other entities host a 1or 2 day event (if not longer) called CQ something something sweepstakes..The FCC is admonished to turn a blind eye and deaf ear to the goings on because?? Are these not also known as contests? During these contests all the respective bands are literally rendered useless on a continuous basis by thousands of individuals running hundreds to thousands of watts into a mix of non directional and somewhat directional antennas.
Enough of these stations are running their equipment poorly or have some amplifier defect which is equivalent to any spurious found at a "keydown" event. The ionosphere acts on these signals in similar fashion as "skip" on the cb band with the exception that these same conditions remain intact thru all hours of the days and nights.(band dependant, naturally)

These "contestants" however, do not limit their operation to a single frequency as is the norm for it's cb counterpart. Instead, entire bands are pummeled and the interference makes it virtually impossible for the non-contestants to use it. In fact, there begins numerous "fights" between the contesters and the non-contesters in which the same vocabulary is evidenced as the "lowly cb operators".

Acting as a group or singly, these entities emit vocabulary consistent with the aforementioned keydown practices in which 10 or more seconds will elapse during a single ptt event. However, the frequency of these ptt events come much faster, more of a rapid fire in nature compared to the slower paced and rather long intermissions provided by the "keydown" events.

So, what have we learned?

How about there's considerably more energy, polluting more spectrum, for longer distances and longer durations during a "law abiding citizenry" contest than it's illicit counterpart?

How about "Those who live in glass houses shouldn't throw stones" ?
BobC

Source record: 115257

>Doc, perhaps he has one of the new hi voltage cars or perhaps he wants to
>use them at his base with a 50 volt supply.

Umm, I was considering mobile.

This is what I was considering as a voltage source. If you take a regular old alternator apart and remove the rectifier string you could bring out 2 more output leads. This provides you with a 3 phase output from the alternator. The voltage between any two phases will vary with engine rpm but upwards of 36 - 40 vac is available.

A transformer could / should be available from Peter Dahl and maybe others to act as an isolation transformer, with a slight boost if necessary, and a 3 phase input to a single phase output. I've seen this done for tube type amps in vehicles although the transformer was for the plate supply.

All you need do at this point is add a rectifier board and a regulator. Im sure you can find a battery arrangement to suit this easily. The batteries don't have to be real high amperage because you've done away with the need for at least half the current for the same output power.

This doesn't seem impossible and lacking more research, it seems viable.

Can't argue with this. The allocations are what they are. You see, Aaron. When you're right, I'll say so. I really didn't take any trouble at all to "discount" your AKC website, your friend did it all on his own. BTW, I couldn't help but notice that FEMA's allocation is right where hundreds of thousands, if not millions, of illegal DX transmissions occur worldwide...and in the same

mode too. How come we're not hearing about more "freeband" busts if they're stepping on the toes of such a formidable agency? Just curious. :-)

Hey Doc, you old enough to remember 'hybrid' car radios where they got the 40 volts for the tubes off of what amounted to a flyback off the audio transistor??

Wouldn't work for this purpose but when you hear vibrator hash on 11 meters you will know he has gone and done it.

Toll, W2OY the Old Yankee from New Yawk is long gone but a legend in the Ham Bands. In fact, the legend does not even come up to the reality for those who ever encountered the SOB.

His most famous line, on AM, was CQ, CQ no kids, no lids, no Space Cadets (sidebanders), no Ks or WAs. He did not react well to newbies, Ks came out in the early 50s followed by WA prefixes nor did he approve of sideband which was also coming in at the time. This was a man who really was worth crossing the street to piss on his grave.

Hey there,

I am trying to locate a GE 3-5826 40 Channel AM/SSB CB Radio,
hopefully one in good condition. Must not have holes drilled in case.
Preferably no mods done to it.

I think it is also known as the GE Model C ??

If anyone has one they wish to part with, or know where I can get my
hands on one, please email me.

I had one of these over 10 years ago and would like to track another
down.

Many thanks,

Michael Andrews,
Melbourne, Australia.

Ok, let's try these for starters:

1. RF power, at the levels that are typically found at keydowns, has
been linked to cancer. Might not be an issue for the public at large,
but the contestants are frequently exposed.

2. Power at these levels have the potential to overload and interfere
with many different radio services, including emergency and public
service. Should somone die because an EMS dispatch was blocked out by a
"keydown", and someone's head would roll.

3. Because these setups are often kludged together, with emphasis on max
power and not spectral purity, these keydowns are nothing more than

mobile TVI generators.

With these in mind it's not hard to see that these keydowns pose a potential risk to the health and safety of the local population, a risk that should not be mitigated for the "jollies" of those that think that their right to fun is unlimited.

What do you expect when the entrance requirements for amateur radio have
been lowered to the degree they have? Ham or Cber, and idiot is still an
idiot. Once upon a time, it was fairly difficult for an idiot to get a
ham license. That day is long past.

Contests (and far be it for me to defend an activity that I personally
dislike but..) were started back in the days when hams had more manners.
It's a shame that they've gotten out of hand.

>

> So, what have we learned?

That there is a BIG difference between the activities of ham contesters,
who are (supposed) to be running legal equipment at legal power levels,
with a group who are running equipment that puts out 10X or more than
the legal max for ham stations.

>

A feeble excuse for attempting to justify an illegal activity.

Toll,
what would you use as a battery setup? I am in the process of getting batteries. I want to know should I use a 16 volt system or an 18 volt system. What should I look for in batteries? What is most important for amplifiers? Reserve capacity?? Amp Hour?? I will be getting a 20 or 24 pill amp. I have 2 leese on my van now they are doing approx 200 amps each. Any help with the batteries I would appreciate. Name brand volts configuration anything man.

Thanks

Yeah, I know he would have. He didn't have a clue about what I was getting at for several days. I'll bet it took him that long to go and find somebody to talk to, and educate him. Notice he didn't start shooting his mouth off about the 2.5KHz deviation until well after I made my post covering both cases, typical frequency deviations you see in current communication equipment, and tried to sound like he knew all along. He didn't. And as I pointed out to him later if he knew why did he spent several days playing Twisted's game of "beat around the bush" to avoid directly answering a simple question. I'll bet he used to use the 5 KHz deviation because it made his radio sound "loud and proud", and never once had any idea about what effect his signal had on the band. Also don't forget Tim is the dummy who proclaimed no less than 4 times on this group that the frequency, 27.700 MHz, which he uses for running illegal packet OP's on the freeband was not a frequency in use in the UK despite the fact that I posted URL's from CB sites showing that it in fact was. Then just a few days ago in this same thread he said that the public does not have a problem telling the difference between CBers and Hams, while forgetting how he told everybody about how he uses Ham gear on 11m. And of course since he was a gang-banger at one point I'm sure his respect for others rights is not high on his list, which I think explains his general attitude regarding his view on his 11m activities.

Here is my original reply to you:

You only need two of the three legs for the VR to do anything... You need the center pin (the one attached to the variable control) and either one or both of the side pins; it just depends on what it's function is. VR4 is indeed the AMC control... If it's not working, perhaps someone has bypassed the control, or removed the mod-limiter, essentially making VR4 useless...

I asked you a simple and very straight forward question at that time too.

"What devation ratio was being used."

After which you beat around the bush for a couple of days because you didn't have a clue what that has to do with the subject until well after I posted the explanation, which covered several cases. Now all you want to do is play CYA (cover my arse) games. Just because a 2.5 KHz deviation is used on 10m has nothing to do with what a technically incompetent CBer will do with the same equipment. And please don't try giving me any crap that you knew the consequences of using the different frequency deviations, you didn't. Since the larger deviation will sound louder to a rig set up for smaller the frequency deviation the dummies will use it. Make all the excuses you want then tune in channel 6 or 11 and monitor all of the splattering stations you find there. Communication does not seem to be their chief aim with the crap heard there. So don't tell me that the same mentality that leads to that mess will not encourage CBers to do what ever it takes to make their equipment sound louder on the band, particularly if all they have to do is press a button to select the larger frequency deviation while using the FM mode.

Hey, anytime. Some of your amp discussions/arguments were definite learning experiences. Of course I don't need a bunch of big power (yet) but someday I might and I know exactly where to go, but I gotta admit that usually the only time I look in the archives is to print a solution for something I'm looking for (Like how to turn a pot all the way up and snip mod limiters..NOT). Nah, I'm more interested in the antenna side of things although a few around here have impressed me with some of the mobiles...I'm no big racefan, but the last time I was around Nitrous was at the dentist's ofice and before that it was in a balloon at Phil Lesh's 50th birthday party, man, some of these setups have come a long way.

(More anti-keydown websites growing every day!)
Editorial Opinion
by Doug Smith
Cherokee Driver
Unit 9830
-----The Keydown - The Ultimate Abuse of CB Radio------
.....snipped a bunch of driveling
here.....
I cannot think of a riskier, more wasteful, or more foolish activity
than building an illegal thirty thousand watt mobile radio system that
one uses on CB to say, "You got the Big Banana in Nawlins, give us a
comback ya'hear?"
Why?
Cherokee Driver
Unit 9830

Hmmm All I've garnered from this is a "dislike" of the practice. I
haven't seen any evidence to support this practice as detrimental to
anything or anybody. Anybody got any "factual" traceable evidence to
support any fatalities or even "near misses" because of this practice?
Ok, let's try these for starters:
1. RF power, at the levels that are typically found at keydowns, has
been linked to cancer. Might not be an issue for the public at large,
but the contestants are frequently exposed.

And this would be the government protecting us from ourselves, something
you support? Sounds pretty left winged, no?

2. Power at these levels have the potential to overload and interfere
with many different radio services, including emergency and public
service. Should somone die because an EMS dispatch was blocked out by a
"keydown", and someone's head would roll.

Shooting at a flying duck has the "potential" to kill, injure, or maim
another living creature. Pontifications are endless.

3. Because these setups are often kludged together, with emphasis on max
power and not spectral purity, these keydowns are nothing more than
mobile TVI generators.

This is incorrect. People don't bring their TV's to a keydown to see
which receives the most interference.

With these in mind it's not hard to see that these keydowns pose a potential risk to the health and safety of the local population, a risk that should not be mitigated for the "jollies" of those that think that their right to fun is unlimited.

HOW TO KNOW WHETHER OR NOT YOU ARE READY TO HAVE KIDS

MESS TEST: Smear peanut butter on the sofa and curtains. Place a fish stick behind
the couch and leave it there all summer.

TOY TEST: Obtain a 55 gallon box of Legos (or you may substitute roofing tacks). Have
a friend spread them all over the house. Put on a blindfold. Try to walk to the bathroom
or kitchen. Do not scream because this would wake a child at night.

GROCERY STORE TEST: Borrow one or two small animals (goats are best) and take
them with you as you shop. Always keep them in sight and pay for anything they eat
or damage.

DRESSING TEST: Obtain one large, unhappy, live octopus. Stuff into a small net bag
making sure that all the arms stay inside.

FEEDING TEST: Obtain a large plastic milk jug. Fill halfway with water. Suspend from
the ceiling with a cord. Start the jug swinging. Try to insert spoonfuls of soggy cereal
into the mouth of the jug, while pretending to be an airplane. Now dump the contents
of the jug on the floor.

NIGHT TEST: Prepare by obtaining a small cloth bag and fill it with 8-12 pounds of sand.
Soak it thoroughly in water. At 3:00 p.m. begin to waltz and hum with the bag until
9:00 p.m. Lay down your bag and set your alarm for 10:00 p.m. Get up, pick up your
bag, and sing every song you have ever heard. Make up about a dozen more and sing
these too until 4:00 a.m. Set alarm for 5:00 a.m. Get up and make breakfast. Keep this
up for 5 years. Look cheerful.

INGENUITY TEST: Take an egg carton. Using a pair of scissors and pot of paint, turn it
into an alligator. Now take a toilet paper tube and turn it into

an attractive Christmas
candle. Use only scotch tape and a piece of foil. Last, take a
milk carton, a ping-pong
ball, and an empty box of Cocoa Puffs. Make an exact replica of
the Eiffel Tower.

AUTOMOBILE TEST: Forget the BMW and buy a station wagon. Buy a
chocolate ice
cream cone and put it in the glove compartment. Leave it there.
Get a dime. Stick it
into the cassette player. Take a family size package of chocolate
chip cookies. Mash
them into the back seat. Run a garden rake along both sides of
the car. There,
perfect.

PHYSICAL TEST: (Women) Obtain a large beanbag chair and attach it
to the front of
your clothes. Leave it there for 9 months. Now remove 10 of the
beans. And try not to
notice your closet full of clothes. You won't be wearing them for
a while.

PHYSICAL TEST: (Men) Go to the nearest drug store. Set your
wallet on the counter.
Ask the clerk to help himself. Now proceed to the nearest food
store. Go to the head
office and arrange for your paycheck to be directly deposited to
the store. Purchase a
newspaper. Go home and read it quietly for the last time.

FINAL ASSIGNMENT: Find a couple who already have a small child.
Lecture them on
how they can improve their discipline, patience, tolerance,
toilet training and child's
table manners. Suggest many ways they can improve. Emphasise to
them that they
should never allow their children to run wild. Enjoy this
experience. It will be the last
time you will have all the answers.

985. Does CB with builtin CB-scanner exist?

I hate flipping the dumb channel knob over and over (and over) trying to find folks near me on the interstate.

Is there a CB with a built in 40-CH scanner that would tell me what band has the strongest signal on it automatically?

Or else, is there a CB that can be tuned from an external source (like a laptop) and a CB capable scanner that can send it's data to an external device (like that laptop)?

THX

Well, he was still around in the mid 60s. His CQ then went something like "CQ CQ ... no lids, kids, space cadets nor school bus riders. Only class A operators on this frequency. No Wet Bottom boys ... from W2OY"
He was something. I was having a nice chat with a guy in Ohio when he jumped on our frequency and started that nonsense. I didn't have my extra then (I obtained my extra at the same time at the FCC in Buffalo when I got my commercial telegraph ticket - close to the same time I got my 1st phone - in 1966), but was quite capable of 40 or so - and it turned out the guy in Ohio could handle it well ... so ... we cranked up the keyers and had a ball. 40 or 50 words per minute CW in the phone band! OY darn near had a stroke!

Thanks Doc,

I was "hearing" that being a good antenna meant sending a signal, and I couldn't understand how a signal was being originated when the lamp was off.

So okay, it's a good receiving antenna.

Thanks again,
Ace

Ole smilin' Bert, grinnin' at the acccomplishments of his freeband
buddies.

Let me tell you what I think happened with those frequencies.

A while back someone posted that he'd worked for the US Forest Service
and their radios used 27 mhz allocations. They eventually "stopped
using the radios" because of the growing QRM from unlicensed
freebanders.

So there is your history. Your legacy, as it were. When freebander
newbies ask how you got the 'freeband', you can tell them:

"We took it over like a swarm of roaches. We made the frequencies
impossible to use. We drove the rightful owner away"

Is that something to be proud of?

-Aaron-

996. Re: Why Keydowns Suck (Editorial)

> > advantage or otherwise of "skip" zones....snipped.........

* *Sorry this is applicable when sunspot cycle is at or near its highest.
Besides, why are you changing the subject here? what does it have to do
with a keydown...snipped....

1. I'm attempting to draw a distinction between the band conditions
prevalent
during each of the different style contests. The point being, it takes fewer
stations on the low bands to interfere with the majority than it does on cb.

(a) In this light, I was attempting to point out that cb "skip" tends to
die
in the early afternoons and conversely that "skip" conditions on the various
low bands actually continues to improve into the night. The same stations
that were causing "contest" interference during the day on higher
frequencies can, and do, follow the "skip" conditions onto the lower freq.'s
well into the night. Couple this with many, many stations operated on almost
all
contiguous frequencies within each band, instead of just one, and you have
entire bands of frequencies rendered as equally damaged as a handful
(maybe) of cb channels...and for longer periods of time.

> > A keydown event lasting almost a day is broken into extremely short
> > segments (usually 10 sec.s or so) of low level and usually directionally
> > focused tx
> > operations interlaced with relatively long durations of silence. Much
> > later in the event is when the relatively few stations that can generate
> > power into the multi kilowatt levels come out.
>
* *How about the days leading up to the keydown and the day after as all the
suburbans and Vans roll out of town with there amps blarin rippin up the
band as the leave town.

#2. Although not addressed previously, I could draw a comparison between the
two style of events. The same is true of the 10 meter, 6 meter, 2 meter, 440
mhz bands. You ever heard these guys coming to or going from a weekend field

day site or similar event? You ever heard these frequencies when a dx station is on the low bands? I will allow that the interference generated here is not one of excess power but rather due to sheer numbers and a very finite number of repeaters, usually, upon which most of this interference results. Here I draw the similarity as it's a real pain in the ass to use any of these frequencies during the same time frames you provided.

* *What do you consider much later in the event?
according to a keydown sheet posted on the wdc web site the 8 pill competition is the 3rd contest, now they are capable of putting out 2kw "Bird Meter Watts" according to the amp makers thats multi Kw's, it only gets worse as I said they start small and overwhelm the area with stray RF.

#3. I cannot argue the point of 2 kw being "multi". I cannot provide actual time references as to how long it takes to get to the higher power class. I would guess there are many contests to be run before those 1 and 2 kw contests and suggest several hrs will pass before hand. I'll leave that up to those who attend to correct me (and you) on that point. Define "stray rf" for me would you?
> > Now let's compare this to the "law abiding citizenry" of which you speak.

* *Ok so you wanna try and compare legit Amateur radio to Illegal CB keydowns
.. ok Lets go for it

> > Several times a year the ARRL and several other entities host a 1or 2
> > day event (if not longer) called CQ something something sweepstakes..

* *A 100% Legal Function!

#4. The fact that it is somehow ordained does not preclude the fact that there
is widespread intentional interference generated by the contestants.

> > The FCC is admonished to turn a blind eye and deaf ear to the goings on
> > because??

* *Of course you do have proof of this right Please cite a reference or a reputable reference.

#5. It is common knowledge, gained through experience, that during "contests"
the FCC "ignores" certain infractions. Be it that (they) the FCC doesn't want to listen or perhaps the ARRL (a publishing company) has "some influence" or given even the sheer numbers of infractions involved, there are generally no tickets written. The only things you hear about later involve those OO (Official Observer) people who, for the most part, couldn't find their own asses with both hands.

#5.1 If one were to actually observe the operations of contests one would certainly find enormous accountings of :
(a) Broadcasting and (b) Intentional Interference to stations already

on a frequency.
This practice, performed on top of an existing QSO, is almost guarantied to force the malevolent incumbents to either search for the impossible dream (a clear freq) or just give up. It's also a neat way to keep a frequency while you're eating your lunch.
(c) Wide spectrum signals. I figure you all know whoever gets heard in the "pileup" is the one that wins the contacts. Well, to this end, many op's either disconnect or don't know how to connect the alc lines to their amps. Some go as far as "mod'ing" or "readjusting" the alc in their rigs so they'll drive the amp a little harder. You can hear these guys from a "mile away" or more correctly, from several kilohertz away.
(d) Additionally, what do you think some of the big boy's are running for amp's? Are you gonna tell me that those Henry 5k's are throttled back? What about those running Alpha export amps? How about those old commercial and military station amp's? You think no one is running them?

#6. These allegations are admittedly just that. I've never made a concerted study in an effort to "tag" anyone. I however can admit that, in the past, I've worked on those amps as well as built/supplied a few custom amps for the sole purpose of contesting. Of the ones I fabricated, none of them would be capable of less than 8k rms at full tilt. All went to "Hammies".

> >Are these not also known as contests?
* *Yes, see above, there are also beauty contests and Pig Calling Contests Your Point?

#7. I dunno how to debate this one. I guess it's a moot point if you can't understand the word "contest".

> > During these contests all the respective bands are literally rendered
> > useless on a continuous basis by thousands of
> > individuals running hundreds to thousands of watts into a mix of non
> > directional and somewhat directional antennas.

* * The Bands may be crowded but they are not rendered useless, people aren't
intentionally stepping on others for the thrill of it.

#8. I believe I addressed this in the previous paragraph as 5.1(a) and 5.1(b). Yes they most certainly are and do.

* * Each operator must ensure his or hers signal is clean, do they do this at
keydowns?

#9 I believe I addressed this one in previous par. 5.1(c) & 5.1(d). Most of the people engaged in contests anymore don't have a clue how their radios sound nor if they are spectrally "pure". You are, for the most part, appliance op's anymore and without someone with a real technical background to "babysit" you during initial installation or tutoring in the use, there's no way you can know what's actually going out over the air or fix it should something go array. And..by the way...that little rcvr running in the background won't tell you much of anything useful.

(a) Secondly, to a limited degree, the answer is yes. It's the bane of all keydowns to waste power in harmonics and other spurious. This means less power going out on the intended channel. This is a constraint of amplifier building in the more professional classes. While I can't sit here and blow smoke up your butt that class c is spectrally clean I will say that harmonic and parasitic free are sought after qualities in keydown amps.

* * It is a event governed by the same FCC Rules that amateurs must follow day in and day out. again your point?

#10. That statement might have been better if you had said " It is an event that .."should" ..be governed by the same FCC rules etc. etc.

> > Enough of these stations are running their equipment poorly or have some
> > amplifier defect which is equivalent to any spurious found at a
> > "keydown" event. The ionosphere acts on these signals in similar fashion as "skip"
> > on the cb band with the exception that these same conditions remain intact
> > thru all hours of the days and nights.(band dependant, naturally)
>

* *Now you are really makin shit up they have a amplifier defect?or are running ther station poorly? Again can you provide some legitamate proof of your wild claims, Hell at the very least Toll Free would also want you to
back up your claim with something other than whats in your illegal mind!

Skip the ionosphere you are again shifting the topic and it has no relevance to the thread, your babbling now.

#11. There again you have me. I cannot debate with proof of amplifier defect or poor operation thereof because there hasn't been any citations offered for these operations. I wouldn't even know where to begin looking for such. All I can debate with is the same personal experience you claim. I can only suggest you wait for the next opportunity and try to avail yourself of a frequency for any length time.

(a). I refer you back to 1 & 1.(a). During keydowns only 2 (possibly 3) cb participants are active at any one time on a single frequency. If those signals skip, they are still centered on only one frequency leaving the remainder available for use anywhere in the country. Conversely, during Ham contests many, many stations occupy all frequencies in a given band. When those signals "skip" they render those frequencies unavailable to the remainder of the stations countrywide. Hence, the reference to "skip". I also alluded to the notion that due to "skip" conditions it takes less operators in a given ham band to render that band unusable than in any cb contest.

> >.....snipped.....
> > In fact, there begins numerous "fights"
> > between the contesters and the non-contesters in which the same vocabulary is
> > evidenced as the "lowly cb operators".

* * There is nothing Illegal going on now is there. The band is crowded and fights happen just as they do in a crowded parkin lot
But they still are not voluntarily breaking federal Law.

#12. I will refer you back to #5 (a) (b) (c) (d) If these practices weren't occurring there obviously wouldn't be reason to "fight" now would there? I also remind you about the rules regarding offensive language. These are all infractions to the Federal Laws governing the Hamster bands.

* * Who cares how a contest is run?

#13. It is exactly that sentiment during hamster contests which culminates into all the abuses of privilege I described in hamster contests. ref. #5 (a) thru (d)

* * Thats the idea to talk to as many people as possible.

#14. So? The goals of the contest between yours and keydowns are different. (a) I return you to your earlier observation. see next...

[* *Yes, see above, there are also beauty contests and Pig Calling Contests]
[Your Point?]
==========
* * Imagine someone trying to have a legitimate conversation then ever couple
of minutes the reciever gets trashed......let me finish this statement.....

#15. ...by some contester who moved in right on top of us and begins repeated "broadcasting" knowing we were having a QSO. Then he gets frustrated because we refused to move at his convenience so he bumps up the mic processor and his power in a blatantly illegal attempt to "jam" our ongoing communications. All the while thinking, "Who ya' gonna' call?"
I said broadcasting because you know that other guy isn't hearing much, if any, other contest stations with the original QSO ongoing.

* * It sounds like this .. well your honor we only smoke 1/2 a joint
so shouldn't it be 1/2 the fine?? We were only going over the speed limit by 10 mph when no one was around...

#16. Like you are so squeaky clean in your personal habits that you never thought of this excuse in any other facet of your life. You do realize that if you aren't upholding all the laws pertaining to your life's circumstances then you are but a hypocrite in citing all your objections here. I'm talking about cruising through a stop sign, a little over the speed limit easing through a school zone, knocking a little off your taxes with a little bit of exotic accounting etc.etc.

* * Listen you are trying to justify breaking the Law to me and it's not working.

#17. I cannot justify breaking these laws unless it has to do with an emergency
status. Nor has any of this been an attempt to do same.

My original intent was never to promote or denigrate either hobby.

It was only to show the sheer arrogance found in the hypocrisy of people here who are on the opposite side of the fire calling the kettle black.

You hamsters are not unlike your cb cousins when it comes to contests. You, Hamsters, have no room to talk about the practices and procedures of your radio brethren because......You are they!

Surely on another group of frequencies but....that is where certain major dissimilarities end.

I've born you testimony of real life examples of the way Hamsters act during contests. I didn't pull any of this out of my butt. There are just as many hamsters doing the same things as cb'ers and causing the same or more interference to other users of their respective bands.

> > So, what have we learned?
* * You twist the subject, you spread false information with no way of backing it up. Do we need to continue?

I've provided you no false information nor have I intentionally twisted or embellished anything. I believe I've been factual. My only regret is that I may not have expressed myself in a way that more readily lent itself to better understanding the concepts I put forth.

You "think it happened" so it is now history (read fact)?????? Getting a little high something over there Douchener? You bring new meaning to history revisionists being assholes AND liars. While you are at it why don't you go do some reading on the Civil War and see who other than Sherman and his troops you can blame the burning of Atlanta on?

Well, well...left out a lil' sumptin'...didn't "we?" What happened to the exterminating company, Aaron? Went on a little "extended" vacation, did they? You and you newfound friend, Doug, tell a great one-sided story. But you both get a F in 'Common Sense 101.'

>Is that something to be proud of?

No it's not, but neither is the fact that I purchased my President Jackson from field agent from your absentee "exterminating" company.

Well, 1966 and again in 1993 ... I obtained my novice in 1962 (WN2CJV), blew the code test for general in 63 (twice, no less) and then got disgusted and bought a code record (they were vinyl back then) and got up to 18 in a week. Got my general in 1964 (WB2OSP) and passed my extra and 2nd telegraph in 1966 on the same day. The 1st class radiotelephone was also obtained in 1966 since I was working at a television station and the 2nd phone didn't cut it. After Vietnam, I went to Pennsylvania as WA3RJX. Moved back to Rochester and obtained the call N2JH. I held that a few years and then let my tickets expire in the early 80s. Decided to get back into the radio game and simply tested out on the extra and general radiotelephone tickets in 1993. Currently hold the callsign AA2QA but am active only on 440 FM (although that 10 meter port has been interesting - I've used the link from 440 to 10 meters a number of times and had a ball).

73 from Rochester, NY
Jim

(ps - that code test was interesting. Except for copying the CW sent in 'Fantastic Voyage', I hadn't copied ANY CW since 1969. If we had to copy a solid minute of errorless 20 WPM code, I'd have had to practice a couple of hours)

Hey - where can I get a quality professional mobile unit install on my pickup in San Diego? (no teenagers from Best Buy or Circuit City). I tried the Mud Shack out in El Cajon, but the guy that answered the phone there refused to do an install because I had a Midland 79-290. He said that they are made by Toshiba and they helped Johnny Walker sell secrets to the Soviets. So, does anyone else have a better idea?

: 477mhz thanx

For the most part, yes. It's better than a 40 Mhz jump up in frequency so
some parts might need a bit of value adjustment. Solid state amplifiers
at that frequency are much less forgiving than some of the classic hack
jobs often described on this news group.

cheers

And you get an "A" in criminal thinking. The excuse that "the authorities aren't around" is the same one used by LOOTERS, Bert. Looters. Think about it.

>>Is that something to be proud of?

>No it's not, but neither is the fact that I purchased
>my President Jackson from field agent from your

>absentee "exterminating" company.

What is a President Jackson? Is that a 'freeband' rig? Since you
mentioned it in this context I can only assume it is.

OK, so you say an FCC agent sold you a 'freeband' rig. What does that
prove?

1. I am not aware of anything in the FCC's charter concerning its
support of illegal CB.

2. I seriously doubt the FCC has a secret policy that condones
freebanding.

So it's reasonable to assume your FCC field agent pal was an
exception. Just because YOUR pal was corrupt, it does not mean ALL
FCC field agents are corrupt (or even a fraction of them). However I
find it very sad that you would take advantage of a federal agent's
corruption.

Here is the post I referenced earlier concerning freeband interference
to the Forest Service. You could write to the author (km6xu) to
confirm this story if you wish.

I would spare no effort to follow it up and get the facts if I were
you.

<Twistedhed@webtv.net> wrote:
> "Mark Walsh" mark@km6xu.die.spam.die.com wrote....
They are folks who have rendered a band with licensed users
completely unusable. No self-respecting pirate radio operator
would advocate the complete obliteration of one of the broadcast
bands; it is sad that the freebanders have made themselves to be
such pests. The forest service near my old house had to buy all
new portable and base station radios because their frequencies
around 27.7 were totally wiped out many years ago.

> "None of this is substantiated. There were no forest service
> users to be displaced.

Tell that to my friend in the US Forest Service; their radios
were functional but old GE dinosaurs that unfortunately
became useless junk because of those selfish 'freeband' yahoos.
That band (27.410 to 28.000) is now a cesspool of noise!

Bert, I have provided a reasonable, traceable reference to back up my
claims. I would hope that you can do the same for your "story" of the
FCC field agent.

Leaving aside the question of why he wants to run 50 watts at 477 MHz, things at that freq are FM and FM cannot be upgescrewed by running Class C so you might as well use it. Actually 477 is near the video carrier of Channel 15 so I am assuming he lives in one of those areas where 470 to 490 is used as a mirror of 450-470; think they call that S-band for some reason.

The 430-440 band is the treaty 70 cm where the sideband etc (no FM) is used. Satellites burp big time with FM so I am assuming his amp is truly linear. If it is adjustable, use the Class C position.

The only reason is efficiency; the class C will give less heat and a bit more moxie.

You're a card, Aaron. Anybody with even an ounce of reading comprehension skill (Not to mention, common sense.) can infer that this is not what I'm saying. You may call the logic "odd," but it's all yours.

>And you get an "A" in criminal thinking. The excuse that "the
>authorities aren't around" is the same one used by LOOTERS, Bert.
>Looters. Think about it.

Did I say that it made it ok? It was more a statement on how you only tell half of a story. Funny, you'd think I'd be used to it.

>What is a President Jackson? Is that a 'freeband' rig?

Maybe you can find one on Doug's adverttiser's website. (sorry, I'm still laughing over that. <ggg>)

>Since you

>FCC field agents are corrupt (or even a fraction of them).

True.

>I
>find it very sad that you would take advantage of a federal agent's
>corruption.

If it makes you feel better, I paid fair market value. Consider to that this rig came from "confiscated" inventory, hence %100 profit for agent 007. Now, just WHO took advantage of who?

>Here is the post I referenced earlier concerning freeband interference
>to the Forest Service. You could write to the author (km6xu) to
>confirm this story if you wish.

Sorry...not interested. Those days are long over for me.

>I would spare no effort to follow it up and get the facts if I were
>you.

If you were me, you'd be thinking about how to realistically help clean up CB. But that'd take compromise and a willingness to try to see the POV from BOTH sides of the equation. Frankly Aaron, I don't think you give a damn about CB, Part 95, or rules...in the end, it's just about the troll.

>Tell that to my friend in the US Forest Service; their radios
>were functional but old GE dinosaurs that unfortunately
>became useless junk because of those selfish 'freeband' yahoos.

You give him the message for me, Aaron.

>That band (27.410 to 28.000) is now a cesspool of noise!

Been there lately, Aaron?

>Bert, I have provided a reasonable, traceable reference to back up my
>claims.

I'd prefer your callsign.

>I would hope that you can do the same for your "story" of the
>FCC field agent.

Right away, Aaron. I'll get right on it. (Don't hold your breath though.) The actually humorous part of the story is that I eventually "exported" the radio.

>Regards,
>-Aaron-

...and to you.

Dick, 477 mhz is the UHF cb band. Sure, give em advice on LINEARS. Do
you care that the power junkies are gonna wreck that band like they
did 27 mhz CB? I guess not.

1021. Measuring ERP At "Keydowns"

Newsgroup: rec.radio.cb
Date: 2002-02-13 01:30:17 UTC
From: voobner@yahoo.com
Message-ID: <fbc7a2.0202121730.3829e91b@posting.google.com>
Source record: 115384

Toll Free said that "keydowns" are a contest to see who has the greatest ERP.

Since Effective Radiated Power (ERP) is measured in watts, wouldn't it make sense to use field strength measurements to discover this figure?

How can a third (receiving) station equipped only with a tape recorder accurately arrive at an Effective Radiated Power measurement (in watts)?

If, for example, one station's operator screams "Toll Free Is An Idiot" into his microphone, and the other station's operator screams "Keyclowns Are Morons" into his microphone, certainly the result (on tape) could sound something like:

"ZZKSSSHHSHHHBZZTTOLLZZZZBBSSTZIDIOTZZZBSSHTMORONSSSSBSSZT!!!!!"

The whole concept of having two transmitters keying at the same time ON THE SAME FREQUENCY indicates that the measurement of ERP is, in fact, not the goal of a keydown.

Therefore the goal must be something OTHER than the measurement of ERP.

Food for thought.

Yup, that about sums up the freebander, keydown ethic. "Cop didn't see it, I didn't do it." Lovely. It's ethics like these that are causing the loss of the very freedoms that most of these so called "citizen band" user are so desperately trying to defend. Nice going guys.

BTW Keep on em Voobner!!! Hopefully, some of what you say will sink in.

Remember though Aaron, in that range it would be FM, and at that range
it is line of sight, no matter how much power you use, it would be no
different than a 50w repeater thats not going to "kill" a band. Think
about it eh?

Depending on the alternator, yes. If your using some of the cheaper ones, more like
30 volts is the norm, at any appreciable current.

>
> A transformer could / should be available from Peter Dahl and maybe others
> to act as an isolation transformer, with a slight boost if necessary, and
a
> 3 phase input to a single phase output.

In a AC to DC situation, you don't really need isolation from the alternator to the battery
bank. Just put a rectifier on them, and your good to go (although, this puts you right back
in the 12 volt arena, so whats the point)? Why not just get an adjustable regulator, on a 24 volt
alternator, and run it at about 40 volts AC. They do that, run much better, and have been tested in
the CB world, and work.

I've seen this done for tube type
> amps in vehicles although the transformer was for the plate supply.
>
> All you need do at this point is add a rectifier board and a regulator. Im
> sure you can find a battery arrangement to suit this easily. The batteries

>
> This doesn't seem impossible and lacking more research, it seems viable.

Already been done. People went back to the 2879 for ease of use,
construction (there are
millions of designs for the transistor) and replacement... Not to mention,
it is usually cheaper.

Not to be discouraging, but at this point, the question has to be "why"? If
you can't answer
that question with anything other than "It takes less current", then whats
the point?

Make a complete seperate electric system to run on 50 volts in your car to
run a linear.

Make a complete seperate electric system to run on 14 volts in your car to
run a linear.

Yes, you lose batteries, but just run a cap bank, and be done with ALL
batteries.

If you would really like to pursue it, private email me, and Ill see what I
can dig up for
parts and notes from past experiments.

> I did answer his question,

Answered it with something factual, or an opinion.

That's right, it was your opinion.

you know what happens at and around keydowns. The
> CB Band is trashed,

Proof, that the ENTIRE band is trashed, please.

and who knows what else happens. I don't care if it is
> for 10 seconds at a time, that makes it all the more worse

Yeah, continuious interference is much better than sporadic, huh?

the interference
> is harder to pinpoint. These things last all day key after key with the
> interference getting worse as the day goes on.

Let's see.. .We shall read, and find out why this is, in HIS educated
mind.....

They start with the small
> amps then continue up in class until the Big Straps key

Usually (speaking from actual keydown experience), they start with the huge
amps
and work their way down.

This is done for a few reasons, but the major reason is:

If you blow your 2 pill in the first keydown, your out of every class you
have entered.

However, if you blow your 16 pill, you can still run the 12, 8, 4 and 2 pill
classes.

People run from big to little at keydowns. Not little to big. Whenever the
club tries
to run big to little, people usually start pulling there money from the
entries and start going
home, because of the fact that if you blow your small amp (the competition
is usually stiffer
in the little classes, so people tend to run harder in the littler dc
classes, meaning you blow
a lot more) then your out for the entire day, as well as out your entry
money.

So, the moral here is: This person is PROVING they don't know what they are talking about.

this keeps the
> crowds around longer more money exchanges hands.

Well, that would be a good theory, if it was true.

You know there is no
> evidance that anyone could show you or prove

Oh, so your just putting out conjecture instead of facts? Nice.

You and your bunch of thugs
> roll into town create havoc and leave, no real good way to gather evidance
> someone complains the police, or whoever will look into it your already
1/2
> way home.

lol.

If someone REALLY wanted to do something about it, you idiot, it woudl fall under
the RICO act, and the club would be prosecuted under the law. Still waiting for that
to happen.

So don't tell me what doesnt happen were you the asshole filming
> at a keydown where the tape ejected from the RF.

Nope.

You wanna play smart any
> other time Troll Free why change your tune now.

I guess I run www.bigradios.com still, huh?

You know the full effect of
> all those Class C splatter boxes. Keep your mouth shut if you don't want to
> tell the truth.

I don't run class C, and don't advocate it. However, if someone asks a question, I will answer it,
even if I don't agree with the way they run.

Now, for the anti-Aaronittes out there, yes, I have run class C boxes, yes I do own some, but the ones
I run on a daily basis all have bias, and most have output filtering on the output of them.

> the event. Is that a fair assumption?

Yes, although I would say the actual KEY ON time is even less than what you quote.

The multi-kilowatt AC boxes are usually keyed on and off throughout the day. The big DC
boxes come out in the beginning, to minimize the risks of not being able to compete in
every class entered, as I explained in another post.

>
> Now let's compare this to the "law abiding citizenry" of which you speak.

> directional and somewhat directional antennas.

Not to mention the amateurs that have converted the flood of Collins 208-XXU
broadcast amplifiers the government gave up around 1990 or so.

Those are good for 10Kw PEP output, damn near forever, in ICAS operation.

I also know of more than a few amateurs running export type amplifiers, big Henry converted plasma gens, etc., etc., etc. The amateur community has
their big guns, and we have ours.

If you doubt it, check the people who ALWAYS win the contests. They
don't run 1500 watts PEP... They BRAG about not doing so on the contesting reflectors
and newsgroups!

> Enough of these stations are running their equipment poorly or have some
> amplifier defect which is equivalent to any spurious found at a "keydown"

Ask them about the G2DAF amplifier and its interesting screen supply
lololol.

> the legal max for ham stations.

What about the top gun US and abroad amateur stations that actively use
tetrodes with handles, or big Henry, Collins, SunAIR, etc?

Are they above reproach just because they have a ticket?

Are they NOT talked about because it doesn't fit the modus operandi?

Are they ignored because the people here that hate people who do keydowns
don't want to realize that CBers are not the only ones using illegal power,
frequencies,
etc?

I wonder.

> mhz bands. You ever heard these guys coming to or going from a weekend field
> day site or similar event?

Field Day is only one weekend per year. Again, the power levels tend
to be significantly less than the maximum legal limit, and thousands
of times less than the illegal "keydown" contests.

> #4. The fact that it is somehow ordained does not preclude the fact that
> there
> is widespread intentional interference generated by the contestants.

If each SSB station takes up 3 khz of bandwidth and every khz is being
used there is going to be QRM, that is a fact. Ham receivers have
narrowband filters to cope with this phenomenon. Still, there is QRM.
Is it intentional? No.

If every ham behaved as keydowners did (keying on the same frequency
as other hams to see who is stronger) there would be no stations
worked, no callsigns exchanged, and no contest winners.

As you know, this is not the case. Ham contest results are published
proving that thousands of confirmed contacts were made among thousands
of stations, and the winners have acheived a higher "contact per hour"
rate than others.

The fact that we have proof that these stations are COMMUNICATING
extremely efficiently (dozens of contacts per minute) pokes a hole in
your claim that ham contests are similar to CB keydowns (which are all
about intentional interference).

> > > The FCC is admonished to turn a blind eye and deaf ear to the goings on
> > > because??

Contesting is not a violation of FCC rules, therefore the FCC does not
turn a 'blind eye' to it. The contests are well-publicized through
legitimate organizations and only take place a few weekends a year.
Most hams accept it, knowing that there are a large number of contest
enthusiasts among their ranks, and that 98% of the time there are no
contests on the bands. It's called "cooperation". Look it up.

It all depends on your amplifier.

What will it safely run at? What is your reflected power? How much do you want to spend?

Lotsa variables.

For daily drivers, a 16 volt system is dependable, and won't kill the average amp.

For a competition system, 3 6 volt batteries in series will do a lot better than a 12 and a 6.
This is because the current distribution is better in 3 like batteries than 2 dissimiliar batteries.

>
> 73 de Bert
> KC2HMN

well bert. i have to say........in my humble opinion........keydowns
do suck and i will tell you why......because after you get there,
wherever it is.......probably on a friday night........they have what
is called a eyeball party.....and that would be cool if there were any
good looking chicks there but all you ever see is dirty leg..so what
the hey........so you just go up to the hired bar tender for the event
and start drinking and you have to watch him because he will try and
rip you off if you are not on your toes........, then when you have
had enough you troop off to your room and hope against hope that some
dumb ass, hasn't ripped you off while you were gone......then you get
up sat morning............go down get some breakfast.........then off
to the 'killing fields'.......ooooooooooooooohhhhhhhhhhhhhhh.............!!!!!!!!!!!!!
that's where all the big strappers get it on.......so first thing you
do is go around and look at stuff.......and that takes about a hour or
so........and considering most of the participants are jet black and
from the ghetto.........you really don't have much in common, so you
just mosey on over and gets yourself some of dem barbaqued ribs and a
red sodi water and sets your big ass down at da pic nic table, come on
, come on.... so all the while , and i do mean all day saturday they
are out there getting with it.....most of the action takes place in
the 16 pill or less classes due to the cost involved of replacing
pills..........so that takes most of the day......then the big boys
get it on........dc and a/c and after that.........that is about
it......everybody just sits around and places side bets and all of
that bullshit..........to tell you the truth....it is a perfect waste
of time and a perfect waste of a good weekend, but to each his own i
guess........during the heyday of cb radio in jones town.........no
one i knew ever went to these things and could care less about them

and skip land as well.....and that is the way i was and am
today.....however i do know some who participated in these events
and whatever and they certainly have a right to do it.....but it is
for the most part a 'black man's ' thing and that is cool but i just
find it stupid to drive hundreds of maybe even thousands of miles for
such bullshit.....but hey .....that is just
jones.....no doubt about it.....

Hi all,
I've been out of CB's for several years and I'm now getting back into it. I just bought myself a Cobra HH45WXST to start with. I was going to use it while on my morning commute. This morning while going to work I got to thinking about trips to Texas. I live in Colorado and my wife's family is all down in Texas and we usually go there once a year.
So I was thinking of setting up my radio with a lapel speake/mike, external antenna, and maybe an amp so I can chat while making the trek. (Several big open fields of nothing to look at along the way!) I don't want to much gear in the car as it's packed as it is. So does this sound like a feasable setup? What suggestions for amp and antenna would everyone suggest?

Thanks!
Steve

If this is true, these hams are certainly easy to find and proscute.
Not like illegal keydowners who hide and are afraid to give their
names and locations.

> Are they above reproach just because they have a ticket?
>
> Are they NOT talked about because it doesn't fit the modus operandi?
>
> Are they ignored because the people here that hate people who do keydowns

> frequencies,
> etc?

Again, hams have a mechanism for policing their own. The FCC and Riley
can and do prosecute. Go see the Rain Report if you don't believe me.
What do illegal CBers have to police their own? Nothing. They don't
police their own - because they are OUTLAWS. Very different from ham
radio, Toll.

> Contesting. A feeble excuse for the testosterone driven amateurs who have
> spent
> as much, or MORE than a CBer, and do the same thing.

No, ham contesting is legal. CB keydowns are illegal. BIG difference.

>Why do you find the concept of legal Cb sickeningly sweet?

I don't find the concept of legal CB sickeningly sweet, Aaron. I find some of Doug's little diatribes re. illegal CB sickeningly sweet. I'm not talking about running amps or freebanding either. He dumped those supporting RM-9807 into the bucket as well. I run a legal CB right here, Aaron.

>Jeez, Bert. In the other thread you gave as an excuse for a corrupt
>FCC agent "nobody's perfect". But the anti-keydown webpage doesn't
>get to use the same excuse? Hm. Double standard?

Our gov't has always admitted that corruption exists. Sorry, I come down allot harder on a hipocrite who blows things way out of proportion in order to give meaning to his little diatribes.

If 477 MHz is UHF CB some operators of TV Channel 15 are going to be mightily pissed. Their pix carrier is 477.25. As Keith notes, 50 watts may well be useless because reciprocity strikes with a vengeance at these freqs.

As the old Quaker lady once said," when thee gets back to thy kennel, may thy mother bite thee.

Thanks, but what is the most crucial the reserve capacity or the amp
hour?
Again would you say that a set of 6 volts in series is better than 8
volts in series? Provided that I still had the current I needed for
the box. I know more volts more watts but cant I see the same watts
with the 16 volt system if I make sure to provide the current???
What would you suggest?? You can email if you like!

> you support? Sounds pretty left winged, no?

If you want to take the end of your feedline and stick it where the sun doesn't shine and give your rectum RF burns, I could care less. But when a transmitter is operating, the RF radiates and exposes everyone in range. Not everyone participating understands the risks, and many would not be involved if they knew.

>
> 2. Power at these levels have the potential to overload and interfere

> another living creature. Pontifications are endless.

But it doesn't diminish my point. Everytime a keydowner keys up, he
could be blocking out emergency traffic on a local EMS frequency. Why
should the potential, be allowed to become a fact?

> 3. Because these setups are often kludged together, with emphasis on max
> power and not spectral purity, these keydowns are nothing more than
> mobile TVI generators.
>
> This is incorrect. People don't bring their TV's to a keydown to see
> which receives the most interference.

No, but the people living in the immediate area, who wish to watch the
umpteenth episode of "friends" might be a bit miffed. When you have a
10Kw transmitter, even a harmonic that is 30db down is still 10 watts of
power, which is more than enough to block out all but the most local TV
stations.

>
> With these in mind it's not hard to see that these keydowns pose a

> The same can be said for handguns, drugs, cigarettes, churches, cults,
> and anything else that a minority voice finds offensive.

I'm sure the number of people that engage in keydown activity is most
certainly the minority when compared to the population at large, an ever
increasing percentage of which, have had enough of radio operators and
their antics. In this case the minority is the one offending the
majority.

> When it ceases to become only the minority that takes issue with something,
> some type of enforced regulation usually follows.

The regulations are already in place and have been for many years. The
fact that the government has not interviened in this scoff-law activity
(yet), does not diminish the fact that it is illegal. The funny part is,
when the FCC finally does swoop down and bust the whole lot at a
keydown, some slack-jawed yokel will have the balls to complain that
"the man" is taking away their rights. Go figure.

I am hardly a left-wing government control type. I believe that the
people have the right to engage in activities that they enjoy. However,
there are no such things as absolutes, and when an activity crosses the
line into harmful to the safety and welfare of those who are not active
participants, that's where I put on the brakes.

You tell him bert!
Definition of the SuperBowl
If 10,000 CB'er's are on the SuperBowl
then only 1000 can be heard some of the times
& only 100 can be heard most of the times
& only 10 can be heard all the time
This is a great example why the bowl is not for the weak!

What about them? Where are they?

>
> Are they above reproach just because they have a ticket?

Hardly.

> Are they NOT talked about because it doesn't fit the modus operandi?

They are not talked about because in all likeliness, other operators
cannot tell that they're operating illegally. It's only a 10db jump (Not
even 2 "s" units) from 1Kw to 10Kw, and with dynamically changing band
conditions, it's hard to tell who is running over the limit.

>
> Are they ignored because the people here that hate people who do keydowns
> don't want to realize that CBers are not the only ones using illegal power,
> frequencies,etc?

Anything more than 4 watts is illegal on the CB band. It's plainly
obvious when someone goes from 4 watts to 10 Kw. It's not so obvious on
the ham bands. I've known people that has run illegal power on the CB
but kept a low profile. The ran it all the time, never made an issue
about "turning the house around", or otherwise procaiming to all that
hear that "Hey I'm running an amplifier!!". Can you tell the difference
between a 100 watt station and a 4 watt station if you don't know
exactly where they are or whether or not they have a beam or are located
on a mountain? I'd say probably not. The same is true for ham
contesters. They're not advertizing that they're running above the
limit, and only a field strength reading will give them away. At a
keydown, bragging about what you're running is part of the game. If you
call attention yto your illegal activity, don't be surprised when people
complain about it. If you run illegally and keep a low profile, and no
one knows and no one is hurt, then there will be no complaints (Like the
old "if a tree falls in the woods and no one's there... theory).

Morally there's no difference, but reality is a different matter.

But it's LEGAL. BIG difference. And it's not the same thing. The purpose of a contest is to make the most points for contacts (Which does not always require high power, and there are point advantages for using less power, or bands and modes that are traditionally "difficult"). The purpose of a keydown is to have the biggest signal. What were you saying about testosterone?

Yaesu FT-101E Transceiver (plastic still on face), YC-601 Digital readout, FL-2100F Amp (plastic still on face), YO-100 Scope, YS-2000 Watt/Swr Meter, Landliner Phonepatch. All in real good working and cosmetic condition. Price is $1100.00 OBO as a complete station (I also have an external speaker, a little rough, that I will throw in extra). Will possibly separate. Please e-mail me with any questions or reasonable offers at- porky@cfl.rr.com

I have 1 last Browning Golden Eagle Mark III (my personal favorite)
for sale. I was saving this one for myself but I haven't used it in 2 years
so I figure it's time to sell. It comes with a Siltronics Model 90 VFO. This
radio is in excellent condition inside and out! A 9+ out of a 10. I have
Browning boxes for each piece. Will pack VFO separately. My asking price for
this set is $500.00. Buyer pays shipping cost. E-mail me with any questions
at porky@cfl.rr.com . Would make a nice Valentine Gift for that Special
Someone!

Try looking at a program called EZNEC at:

http://www.eznec.com/index.shtml

I have personally used the software myself and I can recommend it as easy to use. You can also try looking at a software package called NECWin at:

http://www.nittany-scientific.com/

I don't have a copy of this program so I can't say one way or the other how it works.

Now if you want FREE software you can down load several programs from the Internet for antenna design, however they are NOT as easy to use as EZNEC. The source for those programs are at:

http://www-mo.enst-bretagne.fr/documentation/nec2/ (Manuals)
http://www.qsl.net/wb6tpu/swindex.html (Software)

For modeling tips, and different antenna ideas etc. the following site has many useful articles to read:

http://www.cebik.com/aids.html (Antenna modeling notes and aids)
http://www.cebik.com/radio.html (Antenna articles to read)

Good luck with your antenna modeling efforts and have fun.

>Ahh, yes, you can construe it as that, but the bottom line, and POINT of
>a keydown is not to interfere, it is to outdo, outrun, outperform.

Hmmm...

Since ERP is a function of amplifier power as well as the antenna's radiation efficiency/directivity and transmission line performance, comparing stations using 'bird watts' isn't a very good method to determine ERP, especially since a wattmeter can't discriminate between fundamentals and harmonics.

Because an AM receiver effectively mixes the incoming signals, there is no objective method to determine the ERP of one signal over another just by listening to the audio, as would be the case if the contest were to use FM.

Because the keydown is a comparative contest, a relative FSM would be much more objective. A wavemeter would work even better, since it can be calibrated to the fundamental frequency and would not measure any power radiated as harmonics. And, to satisfy those with a needle fetish, it will also show 'swing'. However, using A3, any swing will always be downward from carrier power, which more accurately represents the true power of the signal.

Relative field-strengh meters and wavemeters are VERY easy to build and VERY inexpensive -- even a less-experienced electronics hobbyist can build one in an afternoon. The cost is less than $40 if you buy all the parts new, or it may cost absolutely nothing if you have a well-stocked junk box. All you need is a box, a meter, and a few cheap parts that you can find in an old radio. Very simple, and much less expensive than the Holy Bird.

So, after examination of just one alternative, it appears that ERP is not the determining issue at a keydown. And neither is cost. So what is the issue? Let's take a different approach:

What actually happens at a keydown? Two mobile stations key up at the same time, while a remote receiver determines which is louder. The criteria for this determination is based on the intelligibility of the signals. One signal must be more intelligible than the other.

The keydown practices of over-modulation and/or Class C operation will radiate any additional power as harmonics, and can actually reduce the power that is radiated on the fundamental frequency. However, it does increase the power radiated on the sidebands by loading them with audio distortion, which may or may not be discernible as speech. The end result is a drop in both ERP and intelligibility, both of which are contrary to the alleged purpose of a keydown.

Also, if the contest were comparing just the clarity of audio signals, this would be better accomplished by an audio distortion analyzer (and probably a speech therapist). This would be done on seperate channels, or at seperate times on a very quiet channel. Transmitting from both stations simultaneously, as per keydown rules, would be contrary to such a contest.

As was shown before, determining the greatest ERP is best determined using FSMs, which also precludes simultaneous transmissions.

Since a keydown requires both stations to transmit at the same time, the criteria for determining the winner must therefore reside in the interaction between the two signals. Knowing that the distance from the transmitter to the receiver is short, and assuming that if either station were to transmit alone it would be reasonably intelligible, it follows that one signal must necessarily be rendered less intelligible by the other in order to win the contest.

Therefore, the only logical conclusion is that the purpose of a keydown, whether by design or circumstance, is to determine who can best interfere with another station. Case closed.

BTW, now that your ISP is working, how about answering some of those many unanswered questions you have pending? Or would that 'interfere' with your plans to ignore them?

> was wrong from the very first day.

As you like to point out so often what happens on 10m has nothing to do with what is "practiced" on 11m. Considering the technically incompetent idiots who clip out limiters etc. in their radios, all in the quest to be louder on the air, without a clue as to the consequences, inhabit every corner of the 11m swamp. And on many Ham rigs, used by people like you Tim illegally on 11m, all that's needed is a simple button press to change the frequency deviation. Then you want me to believe they know what they are doing? Get a life, and tune in to channel 6 and 11 for an example of the splattering overpowered noise boxes on the band. Those bozos don't care a thing about communications, all they care about is being the loudest noise box on the air. If that means running more than the 2.5 KHz deviation on FM, splattering across several channels, to sound louder to somebody else setup for 2.5KHz, they're going to do it. And I'm sure those idiots are not confined to just the two prior mentioned channels either.

1087. Re: Why Keydowns Suck (Editorial)

Newsgroup: rec.radio.cb
Date: 2002-02-13 15:12:36 UTC
From: twistedhed@webtv.net
Message-ID: <20368-3C6A8264-15@storefull-124.iap.bryant.webtv.net>
Source record: 115452

If you want to take the end of your feedline and stick it where the sun doesn't shine and give your rectum RF burns, I could care less. But when a transmitter is operating, the RF radiates and exposes everyone in range.

-In "what" range? Most viewers are not anywhere near the vehicles. Did you know that?

Not everyone participating understands the risks, and many would not be involved if they knew.

-What makes you say this? If anything, these folk know RF better than the ones you are lobbying to go "protect" these poor RF exposed folks.

2. Power at these levels have the potential to overload and interfere with many different radio services, including emergency and public service.

-How does choosing to pontificate possible scenarios even relate? Odds are better of being struck by lightning, should we pass a law and have lightning monitors issuing tickets if you choose to venture out during a storm?

Should somone die because an EMS dispatch was blocked out by a "keydown", and someone's head would roll.

Shooting at a flying duck has the "potential" to kill, injure, or maim another living creature. Pontifications are endless.

But it doesn't diminish my point.

-And it wasn't meant to. It was meant as an illustration that possibilities are endless and we shouldn't be passing indiscriminate laws "just in case."

Everytime a keydowner keys up, he could be blocking out emergency traffic on a local EMS frequency. Why should the potential, be allowed to become a fact?

-You can't understand the point, can you? There are numerous possible situations that could take place and have way more serious consequences than what you are offering. Handguns (or any guns for that matter) are a perfect analogy to your argument, because the potential is there to do much greater harm than that of which you allude concerning freebanding and amps. Why should we let the potential be a fact?

3. Because these setups are often kludged together, with emphasis on max power and not spectral purity, these keydowns are nothing more than

mobile TVI generators.
This is incorrect. People don't bring their TV's to a keydown to see
which receives the most interference.

No, but the people living in the immediate area, who wish to watch the
umpteenth episode of "friends" might be a bit miffed.

-Most are not held "in the city" and many are even in the sticks.

When you have a 10Kw transmitter, even a harmonic that is 30db down is
still 10 watts of power, which is more than enough to block out all but
the most local TV stations.

-I have a guy less than 2 miles from me that is well known on the bowl
and he regularly blows AT LEAST 10KW (mobile) and I can't tell if he's
operating unless my radio is on.

With these in mind it's not hard to see that these keydowns pose a
potential risk to the health and safety of the local population, a risk
that should not be mitigated for the "jollies" of those that think that
their right to fun is unlimited.
Dave
"Sandbagger"
-
The same can be said for handguns, drugs, cigarettes, churches, cults,
and anything else that a minority voice finds offensive.
I'm sure the number of people that engage in keydown activity is most
certainly the minority when compared to the population at large, an ever
increasing percentage of which, have had enough of radio operators and
their antics. In this case the minority is the one offending the
majority.
When it ceases to become only the minority that takes issue with
something, some type of enforced regulation usually follows.
-

The regulations are already in place and have been for many years.

-I said "enforced."

The fact that the government has not interviened in this scoff-law
activity (yet), does not diminish the fact that it is illegal. The funny
part is, when the FCC finally does swoop down and bust the whole lot at
a keydown, some slack-jawed yokel will have the balls to complain that
"the man" is taking away their rights. Go figure.
I am hardly a left-wing government control type. I believe that the
people have the right to engage in activities that they enjoy. However,
there are no such things as absolutes,

_And it is ridiculous to pass legislation to protect us from ourselves
or from "what-if" scenarios when the odds dictate the legislation would
be better aimed at a real plight of society, not those scumbag keydown
cbers that you have a personal problem with who "may" cause a problem
with somebody's cordless phone.

and when an activity crosses the line into harmful to the safety and welfare of those who are not active participants, that's where I put on the brakes.
Dave
"Sandbagger"

-Well, the feds disagree with you which is why they don't give a damn about it. To them, it's not deemed a safety issue.

Hello everyone!

I'm about to take the plunge into the fun world of CB RADIO, so I thought it would be best to post my inquiry in this fine discussion forum!

Could anyone recommend to me the BEST operational CB radio base station currently on the market? I'm a neophyte to this "hobby," so any opinions would be welcomed.

Also, if anyone can recommend a reputable dealer/url where I can find CB base stations, I would be appreciative!

Thanks in advance to anyone who responds! :-)

I can be reached by e-mail or you can simply post a reply here!

As Richard pointed out a power amp will not do him much good except under some conditions, and there are not many of them. Second at 477 MHz with some idiot screwing around on the band it will be easy to find them because you know they can't be that far away. High VHF, and UHF, repeater jammers don't last very long. Too many guys who like to hone their fox hunting skills will normally nail the ofending operator quickly, so for 477 MHz all they do is spin the VFO knob a bit above the Ham 70 cm band and the hunt is on.

Many in fact use copper foil traces as microstrip transmission lines for all of the filters, and load matching in the amplifier. To retune one of those amps requires you know your transmission line theory real good, know the spec's for the transistors used, have a very sharp razor blade knife, and some very thin copper foil to fix the oops. Also some of the circuit boards in those amps use the very expensive and thin Teflon glass material, some as little as 0.030 inches like the Mirage amps, and the copper foil does not stick to it all that well to begin with. It's real easy to wreck a 70cm amp before you know you did it.

I did. Do you realize that a harmonic at -20db down on a 50 KW transmitter is a 500 watt signal, and at -30db its 50 watts etc.? So you would like to assume that a 500 watt signal, or a 50 watt one, that pops up where it doesn't belong is not going to cause somebody a bit of grief?

Since someone asked if they was any proof that the keydowns have any real impact on anybody in the area. Other questions can also be asked too. How may of those amps have you measured the emissions of to be quoting the numbers above? You haul around a spectrum analyzer or something to check these guys out? Do they loose points for running a dirty amp? Also how can you, or anybody else for that matter, really make such a general statement without having measured just about every amp run in those insane contests?

>Also even harmonics will
> not show up on a wattmeter, do the math.

That's only true IF the amplifier is a push-pull type using VERY well matched power devices, otherwise that's a lot of baloney.

Ok, I can go with this. For the short term periods of keydowns (less than a day) where the levels are momentarily high but the averages are extremely low, I havent seen any supporting evidence of long term health issues. Have you?

Taking this a step further, let's look at Hamsters in their natural habitat. Here you've got several neighborhood stations operating at the 1 kw or higher levels on the low bands. The low band antennas are usually dipoles, yagis' and ground mounted verticals.

Most of the time you'll have a vhf/uhf station in the same system and typically 20-60 watts on vhf/uhf into gain antennas.

These stations operate on a year round basis (more or less) in these neighborhoods. The lowband antennas are typically low in altitude and generally not high enough to preclude near field rf penetration into surrounding homes and business's. The vhf/uhf antennas are usually up a few feet from the ground but their patterns are designed for a lower angle of incident and can easily direct appreciable energy

into those same homes and business's.

If the neighborhood had to make a choice between putting up with daily long term repeated exposure at fairly high levels or with very low average 1 day events of exposure which do you think they'd choose?

> > Power at these levels have the potential to overload and interfere

> > service. Should somone die because an EMS dispatch was blocked out by a
> > "keydown", and someone's head would roll.

Ok, I can go with this too. However, when's the last time you heard an EMS system was bothered by a cb set? Furthermore, if there is such a situaution in existance, don't you think it's been an ongoing issue and something is already being done about it? I'll go a step further, the interference I've had to track down for EMS, Police, Fire etc. has been caused by other units/systems operating in the same bands as the Safety systems. Not once was I able to attribute interference to these systems to a cb setup.

In regard to the higher power setups, do you really think these things are kludged together? Just to get them to work at all requires a good deal of proper installation technique and sophistication. Anyone who's embarked on a high power kick is going to, out of necessity, install it correctly. In years past, I've seen some of these setups and quite frankly, there were a few that some broadcast engineers would like to have their names on.

Sure the potential is there and depending on keydown location this may happen..(for a day) Go back to an earlier point I made about Hamsters in their natural habitat. Those hams are the prime contributors to everyday type interference to phones and tv's.

> >
> > With these in mind it's not hard to see that these keydowns pose a

> > "Sandbagger"

Dave, I'm not convinced of health issues from either the long term exposure from locals nor am I convinced there is a health issue with the short term. You haven't provided any research data to support this either.

Admittedly, I haven't done any recent homework to disprove you here either.
I don't think anyone really knows the answer to this and if there is one,
It'll be one of infinite "if this..then maybe".

Probably the long-term exposure, since there seem to be fewer health
risks. BTW, ever get an RF burn? Extremely painful, right down to the
bone.

Are you saying that it has never happened? Considering the power
levels and harmonic distortion of some of these amps, are you saying
it's not possible? Don't you think it's possible that it has already
happened, but because RF doesn't leave any "thumbprints" that the
cause of the interference was never proven?

Perhaps, but that still doesn't necessarily mean they are free from
unintentional radiation. On the contrary, I have never seen one setup
that filtered an IF freq between the exciter and the amplifier. Even
if the common IF of 10.7MHz is 30dB down coming out of the exciter, as
Dave pointed out it will radiate 10W from a broadband 10KW amp. And
10W on an IF is bad news for any radio that uses the same IF,
regardless of the service. That's just -one- example, there are many
more. So maybe they should leave high-power RF to the engineers.

yes they will lose. the point is to put out as much RF on the frequency the judging station is listening too. harmonic energy might move the watt metter but out of band transmissions do no good at taking out the guy on the line next to you. those putting out the strongest signal on the desired freq is the winner therefore you can bet your ass they do focus on putting everything where it should be and use a spec analyzer to make sure it is where its needed and not wasted as harmonics.

> not show up on a wattmeter, do the math.
>

Jay, we have been around this pole before. That even harmonics can be drawn within the fundamental does not mean they do not heat water and heating water is what wattmeters measure. And they will. They will show up as increased SWR as well because few antennas are anywhere near matched on even harmonics. That might help reduce radiation but that is about it.

I give you a standard fundamental peak at 1 with a second harmonic 10 db down and a third 20 down.

Angle fundamental 2nd 3rd Total

0 0 0 0 0
pi/4 .707 0.1 0.008 0.815
pi/2 1.0 0 -0.01 0.99

You will note that we are squaring up the waveform as the Laws of Fourier predict. Any idiot waveform can be reconciled to a sine curve and its harmonics in some proportion no matter how groady. And the converse is also true, mess up a waveform and harmonics result. This is as fundamental as Maxwell's observations that moving electrons, magnetic fields, and electrostatic fields go together like Currier and Ives which is only the basis of electronics as we know it.

The ham and Marine bands were originally set up on harmonics to prevent interference or at least keep it in the family. The prewar original ham bands were:
1.75-2 3.5-4 7-8 14-15 28-30 56-60 112-116 220-225 420-450

At one time 40 meters actually contained 40 meters, and 20 and 10 none of which do today.

The Canadian time station CHU (a digitally constructed SSB with carrier signal BTW) runs at 3330 among other freqs. Believe me, the local 50kw loudenboomer on 1110 pays real close attention to third harmonics and 40db down ain't nearly enough. The second is in marine freqs, the third is in aircraft freqs. If you are familiar with the Sword of Damocles, think of a few tons of hot skunk shit hanging over the Chief Engineer's head.

Whether harmonics show on a wattmeter depends on the wattmeter but a watt is really a measure of heat (about 3400 watts is 100k BTU) and harmonics

do heat water and blow up finals. They are quite real.

Now that has to be about the dumbest statement you have made so far. After hearing those bozos splattering all over the band, and then telling me they know more!! Gee, if there're so smart why can't they put a clean and intelligible signal on the air? Can't be all that hard because commercial radio stations do it all the time, and some of them don't even run as much power either.

> there is no such thing as
> an appliance operator when it comes to dealing with huge multi staged set
ups
> ending up with numbers like 4cx10k and 3cx15k.

Yeah there is Tim. All it takes is some idiot with more money than brains, and an ego. How much of an IQ do you think it takes to key up a pretuned setup, and whistle in to the mic, and one foot on the gas peddle? Heck a five year could do it. I'll bet you dollars to donuts that you'll fine some guy who paid to have his setup built for him by somebody else, took all the credit for it, and paid the real guy enough money to keep his mouth shut about who really did the work. It happens in other areas, like street rods, so why not with those dumb keydown contestants.

"Outdo, outrun, and out-perform"?

There are many sports that claim that as their goal, however they do it legally and with consideration for the public. For example, Formula 1 enthusiasts do not race through public streets endangering innocent people.

I think that's what differentiates keyclowns from the legitimate world. They have no consideration for the public. They want to "outdo, outrun, outperform" and they don't care who gets in the way.

Inner city gangs operate the same way keyclowns do. They don't care who gets in the way of their battles. Oh sure, harming innocent people is not the POINT of their lifestyle, it's a byproduct. Babies, children, old people, innocent people, they all get sprayed with stray bullets. "Outdoing" the other gang is the priority. And oh by the way, they don't care who else is harmed in the process.

Much more to come.

More like a pig that craps where it plays. There're more likely to find a web of trip-wires on UHF than on H.F. Depending on country etc. the UHF band is the home to many services such as TV, police and fire. If they start screwing with a service like the last two you don't have to worry much because they'll get the plug pulled on them so fast there won't be time to unscrew the coax cable from the amp. Once I pointed that out to some yahoo looking for an amp, for his FRS radio, on the Ham VHF-UHF news group he quit asking real fast.

That may happen on the rigs you have used. I have yet to see that happen on any equipment I have used. That includes a selection of Yaesu, Icom, and Kenwood base, mobile, and hand held radios. What has happened in my case is the audio ends up being highly distorted unless the transmitting station's audio level is low, which then limits the deviation. The Icom rig I have, a 706MKIIG, has a special wide setting for FM commercial broadcast and TV audio reception. On the more commonly used 5 KHz setting I can still hear the audio real loud but very distorted.

What radio(s) did you experience the RX muting on FM?

Howdy Sparky,

Thanks for providing those links, I did run through the FCC's links. The EMC one didn't give a specific place to reference and there were way more links on those pages than I could spend the time on. I just didn't see a topic on those pages that seemed pertinent to this discussion. If you'll refine it down to a specific link I would be glad to review it. Thanks.

Ok down to brass tacks. I need to better understand your definition of "unintentional radiation". Does that mean radiation from the chassis itself or does it mean radiation from the antenna on spurious unintended frequencies?

##Judging by the remainder of the paragraph I'm going to assume you meant unintended frequencies from the antenna path. I will also assume you meant to use a filter tuned to actual intermediate frequencies (in common use today) installed between the exciter and amp.

I can't say as I've ever seen a cb radio transmit a signal on a 10.7 mhz frequency. I have intentionally looked for same on various spectrum analyzers connected to both the output of the radio and on outside antenna systems. I've even gone as far as transmitting, in close proximity, 100 watts on 10.7 mhz and it didn't bother the boom box sitting next to the radio I was using. The actual setup consisted of a Kenwood rig using an outside antenna that was resonant around 10 mhz.

Even if the exciter could produce the 10.7 mhz you described, the amplifier would inherently attenuate this frequency at it's input network and, more than likely, at it's output network. The antenna system would certainly reject it and cause a higher reflected power.

The numbers (in db.) you suggest have me befuddled. "If" the exciter could produce power on the IF freq.s you mentioned, I would need the transmitters' actual output power on the correct freq so that I could determine how far down (in db) the spurious is from the main power. Then I would need to know how well the amplifier responds to this frequency in determining just how much is actually sent to the antenna. Then of course, I would need to know how the antenna responds to this frequency to compute the actual energy level being radiated.

I hope I did at least a fair job following your thoughts here.

Just as a note of interest. If someone is transmitting much more deviation
than the rcvr is designed for the rcvr will just mute. It would be pointless
to use a deviation that falls outside the rcvr's passband. No one is loud
when the rcvr mutes.

Old Chinese Proverb:

"Man with eyes closed sees nothing"

Do you take the time to poll the majority of CB users and find out if
their communications are disrupted by your multi-kilowatt
splatterboxes?

No? I thought not.

>>>>>> Anybody got any "factual" traceable evidence to support any
> > > > > > fatalities or even "near misses" because of this practice?

Isn't it enough that the potential exists?

You want a FATALITY to happen before you'll cease illegal and
disruptive operation?

Wow, I'll give you this: you "keyclowns" are certainly unafraid of
parading your criminal nature before a world wide audience.

Gambling?

Hm.

How much money changes hands? Do the organizers have a gambling
license? Are any taxes paid on winnings?

Hamholic, you've brought up the possibility of a whole different
avenue of approach to getting these things banned. I'm going to look
into the various state's gambling laws and see if the AG's office
might be interested in busting a few illegal gambling operations.

We have fatalities from electrical generation, people pumping gas in their
cars, birds flying into airplane engines, water purification, the list goes
on and on. Should all these this cease because the "potential" for harm
exists?
You are still an asshole. Go try to figure some other angle to pitch your
bullshit or at least to an audience who gives a shit.

Hi,

The Galaxy DX2547! Approx. $300, depending on where you go. I suggest Panther Electronics. Here are the links.

http://www.galaxyradios.com/2547.html

http://www.panther-electronics.com/

I also suggest you add a CBCI Channel Guard IF filter. John at Panther can install it for you. Trust me, it works wonders. Best of luck to you.

73 de Bert
KC2HMN

P.S. If anybody suggests clipping the audio limiter for better modulation, run (don't walk) away. Try installing a SP-1a speech processor instead. (Ask John.)

You might want to check your history yourself, Train. If you are
referring to the same incident I'm thinking of, that incident led to
stricter safety rules for those events. A similar incident happened at
Indy back in the 60's. It's called 'graveyard legislation', and it
certianly isn't the best method to make rules.

>refine it down to a specific link I would be glad to review it. Thanks.

Under "Indroduction to EMC" they include a list, "Examples of EMC
problems", in which CB radio is given as an example of a cause of
electromagnetic interference. I thought the entire site was pertinent
since your question was if there was something already being done

about interference. There is, and the two sites I mentioned are two major organizations that deal with EM interference issues all the time.

>## Ok down to brass tacks. I need to better understand your definition of >"unintentional radiation". Does that mean radiation from the chassis itself >or does it mean radiation from the antenna on spurious unintended >frequencies?

If the intention is to put all your RF out the antenna and all on one frequency, then anything else is, by definition, "unintentional radiation". And just about anything can come out of a CB radio when something isn't working quite the way it's supposed to work. Even when it is working properly, there is all kinds of noise and frequencies available for amplification by an external amp, anything from subaudible oscillations to digital square waves with high harmonic content. Since CB radios are not designed to be amplified, these other signals are low enough to be acceptable. But after amplification, they may not be, and they may not even be detectable unless the engineer knows where to look (coherent signals aren't easy to see on a spectrum analyzer unless you narrow the field).

>##Judging by the remainder of the paragraph I'm going to assume you meant >unintended frequencies from the antenna path. I will also assume you meant >to use a filter tuned to actual intermediate frequencies (in common use >today) installed between the exciter and amp.

Use a filter or a trap, but a trap would be better.

>## I can't say as I've ever seen a cb radio transmit a signal on a 10.7 mhz >frequency. I have intentionally looked for same on various spectrum >analyzers connected to both the output of the radio and on outside antenna >systems. I've even gone as far as transmitting, in close proximity, 100 >watts on 10.7 mhz and it didn't bother the boom box sitting next to the >radio I was using. The actual setup consisted of a Kenwood rig using an >outside antenna that was resonant around 10 mhz.

Not everything uses 10.7MHz as an IF, but then not every CB radio filters (or traps) the IF very well. If the amplifier is broadband, then LP your spectrum analyzer just above the second IF and run the power up far enough to get above the noise floor. It will be there, I assure you. And with less power than you might think.

>## Even if the exciter could produce the 10.7 mhz you described, the >amplifier would inherently attenuate this frequency at it's input network >and, more than likely, at it's output network. The antenna system would >certainly reject it and cause a higher reflected power.

The IF is supposed to be attenuated, but not all radios attenuate the IF very well. And while the antenna system will naturally reject part of the signal, part of it will likewise be radiated.

>## The numbers (in db.) you suggest have me befuddled. "If" the exciter
>could produce power on the IF freq.s you mentioned, I would need the
>transmitters' actual output power on the correct freq so that I could
>determine how far down (in db) the spurious is from the main power. Then I
>would need to know how well the amplifier responds to this frequency in
>determining just how much is actually sent to the antenna. Then of course, I
>would need to know how the antenna responds to this frequency to compute the
>actual energy level being radiated.

Although I wasn't talking about ERP, the fact remains that any signals coming from the exciter are going to get amplified by the external amp. As I said before, CB manufacturers suppress the IF below a maximum allowable level, but after a 28dB gain (arbitrary, but typical) from an external amp, those levels quickly exceed the permitted radiation levels even for an intentional radiator on the same freq as the IF. Review Parts 2 and 15.

>## I hope I did at least a fair job following your thoughts here.

Fair enough.

The only GP run on public streets is Monaco. There used to be a second
line race in Portugal.
Le Mans is a closed course and always has been. The 300 SLR sent pieces
into the crowd which has also happened at Indy where a fellow from the
neighboring Wisconsin village was brained by a flying tire. Then there
are two NASCAR tracks owned by the France family which should get Bill
France Jr executed by flame thrower.

I thought about that radiobob but I haven't got the time to monitor ebay. That's why I left my e-mail available for those who are interested. Which I might add, I have had a few replies already. Oh, by the way, in response to the other posting that was not so favorable, I have just completed a personal analysis of myself and find that I am perfectly sane. Phew, that's a relief!

But not for long. Regular car batteries are made to provide a LOT of
current for SHORT periods of time, I.E. starting your car. They aren't
made for long draws, even the type he's probably thinking about...

Use a deep cycle battery.

Bob forgive me for commenting on only one part of your post, but this subject happens to be a pet peeve of mine. The keydowners ("keyclowns") claim they are technically sophisticated - when all they are really doing is wiring a chain of un-filtered RF amps to a cheaply-made exciter that was never designed to operate at more than 4 watts of RF output. If such "keyclown technology" is so efficient/innovative/advanced, why don't we see it used in commercial broadcast transmitters? Or written up in the IEEE Journal?

Almost but no cigar. The dB math is correct. But you failed to include
the effective range of the antenna that does not work on the harmonic
frequencies and the significant loss of the harmonic energy in the coax,
due to very large SWR. Thats why the harmonicas do not go very far.

No again. One more wrong answer and the Aahooga horn goes off.

Push Pull has nothing to do with the it, your answer is baloney all
right.

Need to do the signal analyst math. Here's a hint, no on the other side
of the coin, I think you need to do some reading instead of reciting
buzz words, that you obviously don't know.

There is (was) also the Meadowlands GP here in Jersey. While it was raced on the grounds of the Meadowlands complex it was non the less run on public roads.
Mercedes had an SLR race car fly apart some years ago and removed itself from racing for MANY years only to finally return to racing in the late 90's.

At various times, some Grand Touring races were on public roads, the Mille Miglia in Italy was a prime example and we had the Mexican Road Race, and erroneously named Grands Prix at places like Long Beach and Detroit. The problem, and you hit on it, is extracting money out of any spectators plus the overhead of the police force closing roads. There is not a lot of room to build a Spa or Silverstone or Watkins Glen (where the US GP is held) in a place the size of Monaco; if they had the space they'd probably add to the Casino. A lot of the rally circuit is still held on public roads -- like the Alps in winter, the Baja, etc.

The German GP is generally not held at Nurburgring any more (for somewhat the same reason). This is a long and difficult course built during the Hitler years. When the Grosse Mercedes 600 Pullman was introduced, one with seven people aboard and the air conditioning running was clocking a few seconds over the course record. I will bet some of the reporters had major stains in their Jockeys after that ride. Oddly, I think some other country, Luxembourg or Lichtenstein perhaps, used the Ring for their GP last year.

But with few exceptions the economics on open courses, and closed ones as well, just do not work.

Dick

Methinks Allsteel77 needs to ignore the emminently ignorable and let it
die a natural death.

Not a great example Mope. If anyone has use for a lo-VHF allocation it is more than likely the forest service because it does offer some pretty good range from vehicles without using a repeater that does not exist in 95% of their territory. At the time they got the allocation equipment was readily available and may still be given the architecture of GE radios. By the time they get an appropriation for new stuff, Smokey the Bear may die of old age. CB freqs are not that bad when there is no interference and no AM.

Not a good example at all.

Commercial Motorola, Icom, Standard, Kenwood etc.etc.
There is also a phenonenon where if the signal is pretty strong, you may not experience the muting. I have had this muting occur in my Kenwood TS 940 s as well as a few other Kenwood low band mobiles. I've had this occur in a few Kenwood, Icom ham band vhf/uhf ht's and mobiles as well.

>safety to the public, of public benefit nor the resulting
>interference.

Bob again apologies for cherry-picking one segment of your post but I just wanted to add that I think there is an enormous difference between illegal keydowns and amateur contests.

1. LEGALITY VS ILLEGALITY. I know, this is a big issue. I hear some hams run over 2K during contests. Notwithstanding, even if fully 50% of the licensed hams participating in the contest ran illegal power during a contest (not likely) then it still would not compare with the keyclowns - 100% of whom run illegal power.

2. COMMUNICATION VS INTERFERENCE. We just had a big debate about this and I proved that the object of a keydown is interference: to create an obstacle through which a competitor cannot be heard. The object of an amateur contest is communication: to prove how many verifiable contacts can be made within a specified time limit. This certainly has applications in emergency work where the passing of traffic rapidly is of vital importance. Conversely, I cannot think of one single constructive application that the science of creating "interference" would serve.

3. NONPROFIT VS PROFIT. I have recently learned that keydowns are conducted for prize money and involve gambling. Amateur contests involve no profit motive.

4. PUBLIC BENEFIT VS PUBLIC NUISANCE. A trained pool of organized, equipped, responsible amateurs with traffic handling skills honed by contesting is an asset to the country in time of serious emergency. An unregulated band of anonymous outlaw operators using illegal CB equipment designed to interfere with other CB equipment would be characterized as more of a public nuisance than a public asset.

I'm sure there are more than these 4 points but these are the primary ones. Once again, I must state that no one (least of all me) is trying to make stupid blanket statements like "ham is better than CB".

If you choose to operate illegally, and as a result, get "looked down on" by hams and the general public, you only have yourself to blame.

I prefer someone to comment on one part of my posts at a time.. It makes it
easier for me to respond to a single point better.

Ya' know Aaron, I've seen exactly the same things you describe sitting at
the stations operating in Ham service. No matter where you go in the country
you're gonna find a few hamsters fitting the category you described.

I will beg ignorance of the latest trends in manufacturing process and yield
to your more recent experiences. I can only speak, as I said, of years past.
The units I saw were, by most standards, commercially built even though done
at home. They would in fact shame most of the factory built ham amps on the
market today based on technique and materials.

You wont find anything truly innovative in lo band amps whether it's cb or
ham. All are from a basic design that's just been implemented in a different
way.

In speaking of "installations" I was attempting to show that it's nearly
impossible to run the larger power levels without having a good install.
There's way too much at stake economically to just kludge something
together. You can't expect to make it work from the get-go if the install
sucks anywhere along the line from power source to antenna tip. You ever
seen what just a little humidity will do in a connector at the higher power
levels?

Aaron, I don't doubt for a second that many of the people who are doing this are technically qualified to make up a good system. I don't doubt for a second that there are many more who "think" they are qualified to do it right.

I didn't envelope myself in this diatribe to provide reasons for or against the whole process of keydown contests. I just wanted those "holier than thou" hamsters to know they weren't blowin' any smoke up this ol' man's ass when they attempt to prove themselves better than anyone else.

At this point, If I "had" to pass judgment regarding contests I would have to say either they both stay or they both go. Neither one is "better" than the other in terms of practice, technical accomplishment, safety to the public, of public benefit nor the resulting interference.

Does anyone still remember "why" these ham "contests" were even started in the first place? I know why.

Source record: 115443

Hello MH:

The Sigma 4, 3/4 wavelength vertical antenna is sort of a gimmick to a point but does work well when its installed with a high mast and adjusted for low SWR.

The Sigma 4, hoop is a pattern restrictor, that trys to not allow the antenna to radiate, until a certain length of the vertical element. The design engineers wanted the pattern to be that of a 5/8 wavelength, using the hoop.
Without the expensive hardware that insulated the vertical element, and a involved impedance matching device.

The advantages to this was the antenna manufacture did not need to have a costly insulated vertical element assembly, and a "earn your pay" impedance matching device.

But at the same time did not tell you (in the assembly instructions) that you have to adjust the mast length to tune for the lowest SWR.

After replacing the Sigma 4 with 5/8 ground plane antennas, interference to neighbors consumer electronics is reduced or eliminated.

You will NOT see this type of antenna in commercial or amateur antenna installation.

The Sigma 4 uses aluminum tubing that is .058 inches wall thickness, that allows every 1/8 inch OD (outside diameter) aluminum tubing to fit into each other in a telescopic manner. The vertical element is approx 29 feet long, this long length is very close to the aluminum tubing stress limit. The manufacture in some of these antennas only used sheet metal screws, (and so did the foreign copies of the Sigma 4) which with time will back out allowing the vertical element to collapse inside itself, or allow the vertical element to bend over. Marine Grade stainless steel hose clamps are suggested, rather than the factory supplied ones.

The diagram shows new aluminum tubing being purchased to upgrade and reinforce the base of the vertical element, at a approx cost of 100 dollars, plus running around time. This costly upgrade will significantly reinforce the bottom aluminum tubing, which is where all the mechanically stress is, be advised.

Anyone can set up a web site with any name they like.

I could set up a site at geocities and call it "elvis presley"... but that wouldn't make me him. I could set up a site saying that the world is flat and the "round earth" theory is a 6th plank commie plot to fool the world, with pictures and documents to "prove" it... But the world would still be round.

If a site proved your real name, then my real name is Mr. Brainbuster.

Brainbuster.

1186. Re: CB Outlaws Make ALL Radio Ops Look Bad

The difference is that I do not pretend that "Brainbuster" is my real name
and I am not telling everyone else to use their real name either.
This is a CB newsgroup... "Handles" are commonly used on CB, so it is to be
expected on here. It is also quite common on other newsgroups and the
internet in general.

Most (if not all) people on this ng know my first name, and are free to use
it if they wish. There are people on this ng who have my full name and at
least one ng user has my full address with postcode. If people need to know
my name, I will give them it.
It is not a good idea to give out too much personal info on the internet...
imagine how many fruitcakes are out there just waiting for an address for the
next dust filled envelope.

> > How about using multiple identities and, when called by your first name,

a
> stab, or care to wager a few sheckles?
===

They have given an answer, several times. You must have a problem reading as
well as spelling.
Try the qrz site... WA3MOJ (George Busch). If I know that after less than a
year on the group and not reading the group daily, then you should certainly
have known it with the time you spend on here.

Strange, but when you referred to the area you live in, it was the same town
as listed for George Busch. So you have a better chance of knowing "who is
George" than I do... 1000s of miles away.

===
> > Oh yes, the "anti" chaps are certainly proud of who they are... lmfao.
> > Brainbuster.
>
> Yes, they are just as proud as the guys that call themselves , Brainbuster,
> Landshark, Twistedhed, Pinhead, Moparhead, snapperhead....

As I said... Using "Handles" is common CB practice and common "net security" practice. If you have a problem with that, then you are in the wrong newsgroup.
Those who do use their real name on here do it out of personal choice... and they are not screaming about the use of "handles" on this newsgroup.

The majority of newsgroup users do not need to keep changing the name and e-m info in their header to avoid the killfiles... so, please do not class us as being the same as your type that do and get killfiled each and every time.

Plonk.... yet again.

Brainbuster.

I have the diagrams about somewhere.
Amazingly, the Jumbo is still quite popular here. Maybe it's the look of the radio... it looks like a big bad mother****er, but by todays standards it's a bug pussy (not that type of pussy, Jay and Tim).

> Otherwise, Knights in the UK was the last place I knew of that carried
> cybernet equipment and parts new.

They had one equiv. to the orange type. Not looked recently, but they were around £8 which is not too much to spend on one of those radios.
They don't often go wrong, as there's not much to them. Usual reasons for replacement are wider bandwidth wanted and the core being broken and jammed in place, but they have been known to go "noisy".

> constructive application that the science of creating "interference"
> would serve.

1 & 2. I can agree with your observations of intent on both sides. But...the end result is the same.The paths to the end result are just different. On the one hand there is interference on a single channel in a single band. On the other is widespread interference on many frequencies and covering many bands whether it's intentional or not.

Perhaps I think in terms of degree. During a 2 day ham contest you continously waste entire bands for hours on end for the duration of the contest. No one in the country can or should use your frequency until you abandon it... or someone takes it away from you. During a keydown event, you briefly waste a few channels in a locale. However throughout the country people are still using those same frequencies to talk locally. Also, unless you're right on top of the keydown site, you can still use the remainder of the cb band.

Which contest is the lesser of the two evils? I dunno. I'd have to say they both make it a pain in the ass to use either band. Which one wastes more spectrum in the long term? Which one do I want to put up with? I'll take the

cb event because I can usually get away from that easily enough.

> 3. NONPROFIT VS PROFIT. I have recently learned that keydowns are
> conducted for prize money and involve gambling. Amateur contests
> involve no profit motive.

3. Never never underestimate the power of advertisement. Who do you think sponsors these ham events? Gets clearances and such. Every major supplier and organization is involved in these events. Who do you think publicises these events. The ARRL and every major ham radio supplier. Be the "BIG GUY" in those pileups using our radios,our amps, our mics, our whopper 9000 something or other. Get your 15 minutes of fame in our "rag". Let us do an exclusive story on the guy, his equipment (another ad) and how he does it. And last but not least, you can bet there's a little moolah exchanging hands between rival clubs. (the last by the way is not conjecture)

> 4. PUBLIC BENEFIT VS PUBLIC NUISANCE. A trained pool of organized,
> equipped, responsible amateurs with traffic handling skills honed by
> contesting is an asset to the country in time of serious emergency.

4. Efficient traffic handling in times of emergency is not honed by contest. It is the result of a select few, dedicated op's that practice, practice, practice to make it look and sound seamless. They practice daily and contests only serve to get in the way. The era in which Ham radio is a viable alternative to formal comm's is about over. I'm not saying they're worthless. Far from it. However they are relied upon less and less because formal comm's have improved substantially.

> An unregulated band of anonymous outlaw operators using illegal CB
> equipment designed to interfere with other CB equipment would be
> characterized as more of a public nuisance than a public asset.

4.(a) Yes I can agree. I would add that I find ham contests a "public nuiscance" as well because they detract from my (and others') ability to enjoy the radio during those contests.

> I'm sure there are more than these 4 points but these are the primary

I gotta disagree with you there, Voob. I remember shuffling through all those old ham magazines when I was a kid and seeing lots of ads for radios claiming bragging rights from the latest DX contest. Either way, it's almost a non-issue.

Something flew right past you, Jay. If the antenna is resonant on the
fundamental, it is also resonant on the harmonics.

Also, the minimum attenuation for harmonics were calculated based upon
the maximum legal power that can be used on the fundamental. When you
increase the power beyond the max, you must also supress the
unintentional radiation proportionally in order to maintain the same
level of harmonics, which is what I think Leland was trying to say. So
if a harmonic is 30dB down from a 4watt carrier, and the amp has a
gain of 54dB, then the harmonics must be supressed by 84dB from the
carrier. Or design the amp so it provides zero gain above (and below,
to supress other unintentional RF) the fundamental.

Three batteries in series. Because the current is reduced, the batteries could be used alone, or in combination with the alternator(s). You could rewind an alternator for a higher voltage, which would be easier than mounting three alternators for an equivalent 12.6V system. The cost is further reduced by using fewer support components (splitters, combiners, BIAS CIRCUITS, cooling systems) and simpler design. The higher voltage reduces losses in the power supply leads, and raises the output impedance (although not by much). Overall, it's less expensive and more efficient.

Good question. I have never tested it, but I would suspect that, for
even harmonics, it wouldn't be too far away from the input impedance
at the fundamental. Odd harmonics might be a totally different story.
Either way, if only 10% of a 10W signal is radiated, it can still
cover quite a few acres.

Regency CCR-142 AM 23-channel base with handheld GC Electronics power mic. Checked out a few years ago and it worked. Probably needs tuning. $45 firm, postpaid.

Lafayette HE-15, 5-channel base with push-to-talk switch on CB case; needs a microphone. Checked a few years ago and worked, but probably needs tuning and switch cleaning. $50 firm, postpaid.

Lafayette HE 20A 23-channel base CB, needs original mic, but I will include a Courier CMM-1 handheld mic (minus connector). Checked a few years ago and worked, but needs tuning. $50 firm, postpaid.

Typical end of tail for a gang banger Aaron. Of course Tim can't figure out through his pot fogged brain that even cops don't use 0.32's or the once standard 0.38's because the slugs just bounced off car windows only a few feet away from the gun. So he pulls out a 0.32 while the other guy pulls out his 9mm, or his new S&W 0.40 semiauto. Faced with that kind of fire power Tim might as well have threatened somebody with a sling-shot.

First of all it depends if you're talking about a service within the United
States or outside. Different countries have different rules.

No. And none of us will until 5 or 10 years down the line, if the incidences of certain types of cancer start to increase among those who engaged in "high power" operation. By then it will be too late for those involved.

> Taking this a step further, let's look at Hamsters in their natural habitat.

> into those same homes and business's.

The old "moral equivilency" arguement again. Hams are required to make measurements and understand the RF field density issue. Most ham stations are within the government's guidelines for "safe" exposure levels. Those situations (like ground mounted antennas) that are not, the ham is required by law to make changes to ensure compliance. Unlike outlaw Cbers, most hams still respect the law to some degree.

> If the neighborhood had to make a choice between putting up with daily long

> cb setup.

So your personal experience should be taken as universal? I have, in
fact, seen an episode, in my local area, where a high powered Cber was
"bleeding" into a police radio system. The FCC actually came out for
that one (one of the few times).

>

> > stations.
>
> ## In regard to the higher power setups, do you really think these things
> are kludged together?

Yes. Good engineering practice is often disregarded in the quest for
that big number. Most competition amps look like they were made in my
basement. Comparing these to some of the homebrew ham amplifiers that
I've seen in the past, and there's just no comparison. Leads and
components dressed properly. Circuit layout was thoughtfully laid out.
Much thought was given to maintenance and service. Proper filtering used
to minimize spurious emissions. You just don't see that on most "garage
shop" comp amps.

> Just to get them to work at all requires a good deal
> of proper installation technique and sophistication.

And to get them to work properly is too much work, as long as that
wattmeter is moving upward.

> Anyone who's embarked
> on a high power kick is going to, out of necessity, install it correctly.

"Correctly" is a matter of debate. High power junkies are only concerned
with squeezing the last watt out of their equipment. If reducing
harmonic content results in 10 less watss, then it doesn happen.

> In years past, I've seen some of these setups and quite frankly, there were a
> few that some broadcast engineers would like to have their names on.

Sure, these setups are impressive, for what they manage to accomplish.
But you won't find the engineers at Gates, and Harris rushing to emulate
their techniques.

>
> ## Sure the potential is there and depending on keydown location this may
> happen..(for a day) Go back to an earlier point I made about Hamsters in
> their natural habitat. Those hams are the prime contributors to everyday
> type interference to phones and tv's.

And the hope here is that the ham is responsible and respectful enough
to try to solve the problem. Approach a "high power" CBer with an
interference complaint, and the best you'll get is the one finger
salute.

Of course you're not convinced. If you allowed yourself to even consider
the possibility, it would put a downer on your "fun". Nothing works
better in this case than a healthy case of denial.

> You haven't provided any research data to support this either.

No, I haven't. But the potential exists. Only an idiot would ignore the
potential. And only a fool would laugh in the face of it.

Are you starting a Dave Hall fan club? Frankly I get a bit worried when someone has statistics or particulars on posts that even I've forgotten that I've made. I don't enter into most of these discussions because they're counterproductive. You try to tell a nut that he's nusts, and he'll swear you're crazy. I DO, however, have respect for the law, and more importantly, I respect the rights of other people. Something CB outlaws seem to lack in great quantity.

> While a little of what you've said has been valid

Talking? If you can understand one word in ten, because of all of the distortion, that comes out of those boxes you would be doing good. However logic says if you want to communicate you have to be understood, and those guys sure don't care about that part. I'll bet they would be just as happy making their silly noises using leftover new years eve party favors, and forget any pretense at trying to be intelligible.

There you go again Tim. If the box is designed "right" there should be more than enough margin for very reliable operation. If not then the goof who designed and or built it doesn't know enough about what he's doing in the first place. Besides when the idiot appliance operator has a problem with the set up he can always find somebody to spend his wad of cash on to fix it for them. It's no different than taking a broken down car to the neighborhood garage for mechanical repairs. The car driver doesn't need to know what goes on under the hood, just how to use the gas peddle, brake peddle, and shift gears.

So it seems that's not a deliberately designed in "feature", but maybe more like a spurious response of the particular circuit design in the rig? And to make things even more interesting the local conditions too. So far I haven't personally experienced any muting effect with the rigs I have. The collection of radios I use are FT-847, FT-817, IC-706MKIIG, and a THG-71A HT. Thanks for the info. I'll have to keep my ears open and see if I notice it in the future.

took their ancestors land? It is the way of the world, the majority
rule, regardless of law. There are more freebanders in this country and
others, than the number of licensed users...plain and simple....majority
rules, by force if necessary.

Interesting concept: The rules are made by the will of the majority, and
the will of the majority is to violate the rules. That creates a bit of
a paradox, huh?
-
You're learning.
You attempt a presentation of a given paradoxical situation that applies
and exists because the will of the majority DO violate rules, whatever
they may be..
Not the majority of RULES, but the majority of PEOPLE violate some rule
or law or variation of on a fairly regular basis. The US incarceration
rate and sheer volume of US citizens caught in the penal system compared
to anywhere else in the world confirms this.
The rules and legislations being passed today are not made by the will
of the majority of the people, but rather the will of the ruling
minority (compared to the majority of all), who are not elected by the
majority at all.

> long as its higher than your competitors

Since the field patterns can be some what "complicated" due to multiple antennas, and not known ahead of time, on a vehicle trying to find the max ERP is at best a joke. Since those keydowns are on HF frequencies ground effects factor big time in to field strength measurements because the antennas are so low to the ground.

Wow I can't belive you said that! The normal antenna used is a 1/4
wavelength antenna, at double the fundamantal frequency the antenna is
now a 1/2 wavelength antenna, which will have a ball park SWR of 44 to
1, and the losses in the coax, ... well I don't think my caculator
will go that high!

Is the world really round? How do we really know? Just because we've been told it is by those in higher circles? Has any of us really been out far enough to make that determination? I say the Earth really is flat. It ends somewhere just south of Jacksonville. Once you go past Jacksonville you've gone under and around to the other side. I don't have a clue what these posts are about. I just felt like being a nut.

Hello Bob C:

Yes I have heard people say that it looks like a J-Pole antenna.

But its just a 3/4 wavelength vertical end feed antenna with a pattern restrictor. Because it is 3/4 wavelength these use the inexpensive (Cheap) Gamma Match. No it does not use any 75 ohm coax, anywhere.

I must say the antenna is impressive looking, and all, but I have been tempted to modify one. The Modified Sigma 4, would be called the S-4 Upgrade.

I would reinforce the lower 3 vertical elements, and add on a ground plane, but it still wouldn't still beat out the 5/8 wavelength antennas, imho.

Jay in the Mojave

1225. just HOW many watts on SSB with stock Uniden???

Newsgroup: rec.radio.cb

ok, this might sound strange, but last week i was able to QSO all sorts of DX - from Wyoming to Canada to Michigan, and this was using a STOCK Uniden Grant LT on LSB channel 38 with a short feedline to an Antron 99 antenna near the roof.

however, this week, i can't raise jack!

my question is, despite the skip-factor, just how much power is a "stock" Uniden Grant LT outputting on SSB?

i've read that a maximum of 12 Watts PEP is allowed for SSB communication, but does that necessarily mean the Uniden is pulling that off?

i seem to remember PEP being a rating based on actual power and antenna gain...or something like that...

....snipped......
If you want to take the end of your feedline and stick it where the sun doesn't shine and give your rectum RF burns, I could care less. But when a transmitter is operating, the RF radiates and exposes everyone in range. Not everyone participating understands the risks, and many would not be involved if they knew.

Ok, I can go with this. For the short term periods of keydowns (less than a day) where the levels are momentarily high but the averages are extremely low, I havent seen any supporting evidence of long term health issues. Have you?

No. And none of us will until 5 or 10 years down the line, if the incidences of certain types of cancer start to increase among those who engaged in "high power" operation. By then it will be too late for those involved.

-Sure. Just like countless of other scenarios. Pure bullshit. We know cigarette smoking positively causes premature death and cancer and all the things you wanna attribute to those bastard cbers signals. Gulf War syndromes, etc...there is no way to tell what the future holds as there are no long term studies on "new" implementations (certain treatments and drugs, living in close proximity to EMF's, eating irradiated foods, nutritional organic substances and enhancements, etc) to look to. Once again, your examples are limited only to isolated incidents (which can't be substantiated) and by your "what if" scenario.

Taking this a step further, let's look at Hamsters in their natural habitat. Here you've got several neighborhood stations operating at the 1 kw or higher levels on the low bands. The low band antennas are usually dipoles, yagis' and ground mounted verticals.
Most of the time you'll have a vhf/uhf station in the same system and typically 20-60 watts on vhf/uhf into gain antennas.
These stations operate on a year round basis (more or less) in these neighborhoods. The lowband antennas are typically low in altitude and generally not high enough to preclude near field rf penetration into surrounding homes and business's. The vhf/uhf antennas are usually up a few feet from the ground but their patterns are designed for a lower angle of incident and can easily direct appreciable energy into those same homes and business's.

The old "moral equivilency" arguement again.

-Wrong. It's the folks that have a hard on for cbers that are constantly comparing hammies to cbers.

Hams are required to make measurements and understand the RF field density issue. Most ham stations are within the government's guidelines for "safe" exposure levels.

-That is so far out in left field it needs no further comment.

Those situations (like ground mounted antennas) that are not, the ham is required by law to make changes to ensure compliance.

-Sure they are. We are governed by the FCC also, only we have twice the fun at a fraction of the hassle, which I suspect is an underlying problem with some of you.

Unlike outlaw Cbers, most hams still respect the law to some degree.

-Now the degree to which one is obedient is correlated to respect? But didn't you say in a prior post last time we had this conversation that if we choose which rules to obey and ignore it can result in anarchy? Have you preached this idea to your fellow upstanding licensees on 10 or 20?

If the neighborhood had to make a choice between putting up with daily long term repeated exposure at fairly high levels or with very low average 1 day events of exposure which do you think they'd choose?

The one that was LEGAL.

-Sure they would. Just like they did with alcohol during prohibition. The safety issue was pushed on the public then too, and it didn't work any better than it does now.

Power at these levels have the potential to overload and interfere with many different radio services, including emergency and public service. Should somone die because an EMS dispatch was blocked out by a "keydown", and someone's head would roll.

Ok, I can go with this too. However, when's the last time you heard an EMS system was bothered by a cb set?

I've never experienced an earthquake, but that doesn't mean they don't exist.

_The "what if" factor has run it's course.

Furthermore, if there is such a
situaution in existance, don't you think it's been an ongoing issue and something is already being done about it? I'll go a step further, the interference I've had to track down for EMS, Police, Fire etc. has been caused by other units/systems operating in the same bands as the Safety systems. Not once was I able to attribute interference to these systems to a cb setup.

So your personal experience should be taken as universal?

-The anticbers among us quote someones claim about EMS interference and attempt to use it as substantiation as fact. Glad to see you at least recognize that just 'cause they claim it doesn't make it so.

I have, in fact, seen an episode, in my local area, where a high powered Cber was "bleeding" into a police radio system. The FCC actually came out for that one (one of the few times).

-We all have heard the stories. Actually, this wasn't so far fetched years ago, but to put forth the word that this somehow is a frequent occurrence in today's world in the US is bullshit.

3. Because these setups are often kludged together, with emphasis on max power and not spectral purity, these keydowns are nothing more than mobile TVI generators.

No, but the people living in the immediate area, who wish to watch the umpteenth episode of "friends" might be a bit miffed. When you have a 10Kw transmitter, even a harmonic that is 30db down is still 10 watts of power, which is more than enough to block out all but the most local TV stations.

In regard to the higher power setups, do you really think these things are kludged together?

Yes. Good engineering practice is often disregarded in the quest for that big number. Most competition amps look like they were made in my basement.

Which brands or models are you referring to? Most comp amps in use today look way beyond what your AVERAGE hammie, IMHO, can achieve, with looks AND performance, with no outside assistance, of course.

Comparing these to some of the homebrew ham amplifiers that I've seen in the past, and there's just no comparison. Leads and components dressed properly. Circuit layout was thoughtfully laid out. Much thought was given to maintenance and service. Proper filtering used to minimize spurious emissions. You just don't see that on most "garage shop" comp amps.

-Does your reference to "garage type amps" mean the same thing as when you refer to "most comp type amps?"

Just to get them to work at all requires a good deal of proper installation technique and sophistication.

And to get them to work properly is too much work, as long as that wattmeter is moving upward.

Anyone who's embarked
on a high power kick is going to, out of necessity, install it correctly.

"Correctly" is a matter of debate.

-So is your use of the word "properly" and the phrase "good engineering properties."

High power junkies are only concerned with squeezing the last watt out of their equipment.

-And power hungry ego junkies come to usenet in order to bicth about other's doings when it doesn't affect their world in the slightest.

If reducing harmonic content results in 10 less watss, then it doesn happen.

In years past, I've seen some of these setups and quite frankly, there were a few that some broadcast engineers would like to have their names on.

Sure, these setups are impressive, for what they manage to accomplish. But you won't find the engineers at Gates, and Harris rushing to emulate their techniques.

Sure the potential is there and depending on keydown location this may happen..(for a day) Go back to an earlier point I made about Hamsters in their natural habitat. Those hams are the prime contributors to everyday type interference to phones and tv's.

And the hope here is that the ham is responsible and respectful enough to try to solve the problem. Approach a "high power" CBer with an interference complaint, and the best you'll get is the one finger salute.

-More bullshit. You get what you give, but you go on sharing with the world that ittle bit of anger you have with cbers in whatever hopes you feel that accomplishes.

With these in mind it's not hard to see that these keydowns pose a potential risk to the health and safety of the local population, a risk that should not be mitigated for the "jollies" of those that think that their right to fun is unlimited.
Dave
"Sandbagger"

Dave, I'm not convinced of health issues from either the long term exposure from locals nor am I convinced there is a health issue with the short term.

Of course you're not convinced. If you allowed yourself to even consider the possibility, it would put a downer on your "fun".

-Yea, that wouldn't even compare to consider the responsibilty of gun ownership, now would it?

Nothing works better in this case than a healthy case of denial.

You haven't provided any research data to support this either.

No, I haven't. But the potential exists. Only an idiot would ignore the potential. And only a fool would laugh in the face of it.

-ike we laugh in the face of the possibilty of getting struck by lightning...better chance ya' know. That in-the-box type thinking is classic behavior from those who demonstrate a need for nothing less than 100% structure in their lives initiated by another.

Admittedly, I haven't done any recent homework to disprove you here either. I don't think anyone really knows the answer to this and if there is one, It'll be one of infinite "if this..then maybe".

Doesn't "maybe" qualify for some sort of consideration?

-No. Not when the odds are weighed and calculated and your element of danger is about the same as winning the lotto. As shown, odds are better at getting struck by lightning.

I am hardly a left-wing government control type. I believe that the people have the right to engage in activities that they enjoy.

-As long as you approve, right? You demonstrated this by your concern for the gonads belonging to the attendees of a keydown because of possible and damaging stray RF.

However, there are no such things as absolutes, and when an activity crosses the line into harmful to the safety and welfare of those who are not active participants, that's where I put on the brakes.
Dave
"Sandbagger"

I don't believe any of this for a second. Dave, I've read a lot of your postings. You've complained about almost everything down to the most insignificant of details.

Are you starting a Dave Hall fan club?

-One per forum, please. Try a hammie group..maybe a ncode group..some of the one's here buy into that bullshit.

Frankly I get a bit worried when someone has statistics or particulars on posts that even I've forgotten that I've made. I don't enter into most of these discussions because they're counterproductive. You try to tell a nut that he's nusts, and he'll swear you're crazy.
I DO, however, have respect for the law, and more importantly, I respect the rights of other people.

-Again, only of they see it your way, you have more than demonstrated your contempt for cbers, illegal or not.

Something CB outlaws seem to lack in great quantity.

-And there is a perfect example. If a cber chooses to use 27.555, or is slghtly above 4 watts, he is for all general purposes, referred to as an outlaw by your kind. Ok, no problem, I can dig it. Going by the merit of your statement, this infers that the person that may speak on 555 has

great contempt and is full of anarchy that transpires to other facets of his life? C'mon.

While a little of what you've said has been valid (in my estimation) most of it is just whining about such insignificant stuff. I gotta tell ya Dave, I'm glad you're not in a position to write public policy because, quite frankly, I don't wanna' live like you.

No, I suppose not. Nothing threatens an anarchist more than the rule of law.
Dave
"Sandbagger"

Not so. Without law, anarchy wouldn't be possible. Anarchy thrives on law.

jabb3rw0cky,
The maximum output ~can~ be 12 watts Pep, but is probably
less than that, measure it. The difference between what you
were able to do 'yesterday', and what you can do today, isn't
power output, but propagation. That's just the way it is.
What you may be thinking of concerning power and antenna
gain is 'ERP', Effective Radiated Power. 'Pep' has nothing to
do with antenna gain.
'Doc

Just because a majority of people may violate a majority of the laws doesn't mean that the majority of the public is opposed to those laws; but any one person may (or may not) be opposed to whatever law they happen to violate, in which case you have not proven that the violators of any specific law are a majority of the public. If they were the majority, then they would be able to get the law changed legally, and then would no longer be in violation of that law. And with respect to the topic, they would have to look for other laws to violate in order to get their kicks. Either way, that's no excuse for the violation.

> The rules and legislations being passed today are not made by the will

Quit smoking that funny stuff, twist. Just because you have some sort of personal grudge with the system doesn't mean you have to make up paranoid delusions. They may not be elected by THE majority, but they ARE elected be a majority of the voters. That, and the fact there are people like you in our society, is a very good reason for everyone to get out and vote.

Nope, that doesn't sound strange at all. Ready?...Stock Uniden Grant XL doing 12 watts PEP, a hastily home-brew 1/2-wave dipole Scotch taped to the wall fed by 9 ft. of "mini-8," and viola...Northern Mexico and Shannon, Ireland.

>however, this week, i can't raise jack!

You are at the mercy of the ionosphere. Some folks might refer to this as "conditions." When the ionosphere is bombarded with charged particles or "ionized," (...resulting from sunspots or explosions on the surface of the sun.) RF energy (Particularly at HF frequencies.) is easily reflected back to Earth. This is known as DX or "skip" and can cause a 12 watt signal @ 27 MHz to travel great distances.

>my question is, despite the skip-factor, just how much power is a
>"stock" Uniden Grant LT outputting on SSB?

Sorry to be redundant above. To answer your question, it's likely putting out between 11 and 12 watts PEP. The max you can expect this radio to "efficiently" put out is about 17 watts. The extra 5 watts will do you no good as you must actually double your power output to gain a discernable increase in your signal strength.

>i've read that a maximum of 12 Watts PEP is allowed for SSB
>communication, but does that necessarily mean the Uniden is pulling
>that off?

Uniden's pretty good about their specs. My old Royce put out about 11 watts PEP out of the box. My current Grant XL did 12 watts PEP on the nose. Radio Shack rigs (Despite being made by other manufacturers i.e. Uniden, RF Ltd., etc.) is well known for coming out of the box doing 3 watts on AM and 10 or so watts PEP on SSB. I can't explain why...playin' it safe, production tolerances, (Or lack thereof?) I dunno.

>i seem to remember PEP being a rating based on actual power and
>antenna gain...or something like that...

PEP or Peak Envelope Power in the max. power output based on your modulation. There is no carrier, the intelligence is all carried in one of the sidebands. 12 watts is all you need and the nod of the Propagation Gods. Hope that helped. :-)

A quarterwave is resonant on harmonics but even ones are on half waves
which have a very hi input impedence and a really crummy SWR. Odd
harmonics are resonant on quarter waves and it is likely the third
harmonic will be radiated better than the fundamental. Beyond 3/4
resonance, the antenna loads gangbusterly but tends to endfire. That is
BTW why they pay some real attention to the 3rd harmonic traps on our 1110
loudenboomer, the antenna array radiates it like mad.

That of course depends on the harmonic Jay. I would agree with your statment
for even harmonics, but not 100 percent where odd harmonics are concerned.

> and the significant loss of the harmonic energy in the coax,
> due to very large SWR. Thats why the harmonicas do not go very far.

I doubt there is that much loss in the coax for harmonic energy except for
the frequencies in the mid to high VHF range. Then there is the matter if
its even or odd harmonics, which determines how much is radiated from the
antenna.

> >
> > >Also even harmonics will
> > > not show up on a wattmeter, do the math.
> >
> > That's only true IF the amplifier is a push-pull type using VERY well
> > matched power devices, otherwise that's a lot of baloney.
>
> No again. One more wrong answer and the Aahooga horn goes off.

Think about it for a few minutes Jay. If what you say is true then an amplifier pumping out a huge harmonic content would show a perfect 1 to 1 SWR match when connected to a perfect 50 ohm resonate antenna. But you'll find that doesn't happen. Why? Because the even harmonic does not radiate well, the odd does however, and gets reflected back towards the source. You see the same thing using a watt meter. You see the harmonic energy as reflected watts back towards the load. To prove it is in fact harmonic energy there you use a duplex filter. That is a filter that couples the fundamental energy out to the perfectly tuned antenna. The other port is terminated in a 50 ohm dummy load. Now stick your SWR meter in line before the filter. Now you will get you 1 to 1 SWR because the harmonic energy is directed to the dummy load where it gets dissipated as heat and not reflected back toward the source screwing up the match.

>
> Push Pull has nothing to do with the it, your answer is baloney all
> right.

Consult any engineering text you like on amplifier design Jay. Any of them will tell you straight out one of the features of a push-pull design is the marked reduction is second harmonic production. Its a fact. However nothing is done to reduce even order harmonics. Every time this point comes up NOBODY has produced any references that says otherwise and can prove it. This is such a basic point I'll bet you'll even find it mentioned in high school level texts books teaching basic electronics theory.

Dave, high power Ham stations have been around for many more years than
any high power cb setup. If there were going to be any real damage it would
have shown up by now. Also, look at those higher powered Am broadcast
systems located in marshy neighborhoods where people have moved into over
the years. No findings of problems there.

I confess I don't understand what you mean by "moral equivilency" in this
regard. Hams have only recently been mandated to use any degree of exposure
guidelines and most, I would bet, don't have a clue how to interpret the
guidelines nor test for them. If there were a real problem it would have
surfaced by now. And how do you know those high power cb's aren't close to
being within those guidelines? Remember, there different standards regarding
type of operation.

Yeah right. Just because something is called legal doesn't mean it's
correct or morally right. The simplest case in point would be why our fore
fathers dumped sacks of tea into the bay. It was ordained legal to tax but
it wasn't right.

##No, I wasn't saying it had to be taken as gospel. Far from it. In rereading, you'll se where I agree the possibility exists. The point here is if the EMS system were succeptable to cb interference that same interference, most likely, existed before the contest and they would be doing something about it prior to the contest.

I'll agree that the amps are not as "pretty" as can be. I can only go by what you say in this regard because I haven't seen these setups in a number of years. I will debate the harmonics thing though. If harmonics resulted in ten less watts on freq., that amp would be back at the bench trying to rid it of those signals in an attempt to get those ten watts back onto the main freq.

> > In years past, I've seen some of these setups and quite frankly, there were a

It's funny that you should mention these companies. A couple of the amps that I spoke of seeing personally were actually built by a guy working for Harris at the time. I'm talking close to the ten kw arena. I can also say that I knew of a few more high power engineers around the country that had

done the same thing.

I know this happens. Can't say otherwise. I would disagree on the motive
of the hamsters and cb'ers who do take the time and trouble to stop
interfering with their neighbors. I would say responsibility and respect are
secondary incentives with "just being able to talk without someone bitchin'
" as the primary concern.

Dave I always consider all the possibilities available to me. I've shown
in just these posts alone that I agree with possibilities. I'm a firm
believer in "anything's possible". I just don't let myself get lost in the
realm of "unrealistic probabilities". It's possible a meteorite will strike
one of us in the head someday.The likelyhood of which is? It's certainly
possible to contract certain cancers from just standing out in the sun too
long. The jury's in on this one. The probability that someone is going to
get cancer from a radio signal eminating from an extremely short term
exposure to high power cb rf is infinitesmal compared to the sun's activity.
If it were anymoreso a threat, we would already be aware of it in stronger
federal terms than "uhhh, wellll, maybeeee, it miiiiigghhtt be possible...
if the moon is at the right height and there's a second teusday this week".
Those words (paraphrased of course) are pretty much as far as the government
wants go. Why? after all the time, expense and hoopla about this they still
have no conclusive evidence to support your contention.

There's one thing Iearned about research people working with grant money
either from the gov. or private enterprise. They have a nasty tendencey to
become alarmists prematurely so they can justify
further appropriations. They need to come out with something, and usually
do, to keep funding forthcoming. So...they'll speak just enough, carefully
chosen, words to keep you on the edge of your seat. Just enough "half
truths" and inuendo to make you think, well maybe we could study this a
little longer...how much more do you need?

> > You haven't provided any research data to support this either.
>
> No, I haven't. But the potential exists. Only an idiot would ignore the

either.
> > I don't think anyone really knows the answer to this and if there is
one,
> > It'll be one of infinite "if this..then maybe".
>
> Doesn't "maybe" qualify for some sort of consideration?

Sure it does. Absolutely. But not enough to get lost in the unfathomable
realm of probabilities.
Nor should I/we take an alarmist stance based on what millions and millions
of dollars and thousands upon thousands of man hours can't seem to prove.

1241. Re: 50 volt parts

Newsgroup: rec.radio.cb
Date: 2002-02-14 19:21:02 UTC
From: BobC <bob_c_89431@yahoo.com>
Message-ID: <u6nsaqngto7q25@corp.supernews.com>
Source record: 115548

In terms of dollar per watt. I guess I was figuring that very few would balk at the expense of installing another alternator. I figured they could remove the diode packs from an old cheap Chrysler alternator and put in two more terminals which then turns it into a three phase output. Between these terminals would be aprox 30-35 vac maybe more. I figured in a 3 phase transformer to boost the ac to a little higher voltage (if nec) and provide for a single phase output. I figured in a cheap regulator circuit, an external diode affair and some filter caps. As someone else pointed out there may even be a better alternator available to start from.

Once this is done, the rest is easy. I figured a savings of current thusly gauge of the wire. There should be savings in space as cubic inches per watt. A see a savings in the losses and parts count due to the numbers of combiners, splitters, other support components attendant with multi stages etc. I can foresee a savings in effort to keep spurious down due to less stages being overdriven. I see a savings in time to match all the stages impedances.

I figured one of Motorola's parts I think the mrf 153 or something like that. It's the one rated at 600 watts rms. I know you can comfortably design this for outputs of over 1k in short durations. It's been done in past years for Ham amps. The military have been proving this device for 20 years.

I figured since the current was cut by 75% (compared to typical 12 volt)for a given output power you could easily combine 2 or 4 devices.

I figured with 4 devices running a total of 6400 watts input power would be about 130 amps. At 60% you would see 4000 watts out comfortably. Without volting it.

How many "unvolted" transistors do you need to get here with ordinary 12 vdc parts. Even volted "comfortably" how many?

Like I said before, it was just an idea I had rumbling around in my head and hadn't done the research yet to discover the "cost effectiveness".

> Jay in the Mojave

I dunno' 'bout that "pattern restrictor" thing. I figure its along the lines of an impedance matching affair.
Look at the J pole. It has two vertical elements. The longer one typically a half to 5/8) is the main radiator and the other (1/4) is part of the matching network.

I figure the cone shape takes the place of the 1/4 wave element as part of the impedance transformation because it would provide a very wide bandwidth in a physically shorter section. The other tuning arrangement allows for further impedance transformation while still allowing for fine tuning.

Just guessing on my part. By the way, a J-pole (as depicted in the ARRL mag) will have the gain of something between a 1/2 wave and a 5/8. Not a big difference.

1244. Measuring ERP??

Newsgroup: rec.radio.cb

Message-ID: <nMUa8.80$QR4.79@nwrddc01.gnilink.net>
Source record: 115556

Why does Tim and Toll Free etc think a keydown is a ERP measuring contest? If I throw a 20 kw deadkey I will have more erp than a guy who i talks 10 kw but his modulation will cut my lips off. keydowns are more than ERP contests, Thats why over modulated radios work the best.

Audio is what wins keydowns, it is who the judge(watergate) hears that is how a winner is determined. I know the top builders in the keydown field and not one of them uses a spectrum analyzer to tune an amp for a keydowns, why should they . That goes from Ghostrider to Blue gill to davemade to xforce to noname not one of them does this.

1246. does CB skip travel West, as the sun sets?

Newsgroup: rec.radio.cb
Date: 2002-02-14 20:27:06 UTC
From: jabb3rw0cky@netscape.net
Message-ID: <8354e2f6.0202141227.76b16667@posting.google.com>
Source record: 115558

skip seems to travel from East to West, or as the sun sets, right?

late evenings, i hear California, Oregon, Northwest Territories and Alaska clear as a bell - but i can't make crap for contact with them.

based on my (limited) CB DX experience, i am usually in best contact when the "skip zone" is in my time zone - CST, Michigan and Montana for example...

when the "skip zone" changes, say to the West, i can't make any contact worth a darn, but i can HEAR some CB'ers clearly and loudly enough that they might as well be parked in my driveway...

so here's my question:

since skip tends to rise and fall, like waves, does this mean that when i hear someone LOUD AND CLEAR that they can generally hear ME loud and clear?

is this any different if not just ONE person sounds clear above the noise, but EVERYONE suddenly sounds loud and clear?

because there goal is not short term extreme competition there goal is long term easy going transmisions. keydowners compete on the same level against each other. they all have there own tricks to give them the edge over the next guy. imagine you with a 4 pill battling 20 other guys with 4 pills and all the tweaking and peaking on your antenna system and your one or two extra volts to the box is the only thing seperating you guys because your all running the same transisitors and since most of them are pushing it so hard to get that extra couple watts advantage over the next guy there having to replace pills after every break so you can be sure most all of them got some soldering iron experience and alot of cash spent on the hobby.

Oh boy - this is probably why the general license handbook goes on and on about radio propagation - and why the fcc wants you to know about it in the exam.

The simple answer is no - skip is all based on antenna characteristics and sunspot cycles. In general 10 (and 11) meters works best during the daylight hours.

Michael Jantzen ^_^

I should have said amateur contests involve a "ridiculously small amount of profit motive" compared to keydowns.

MAYBE the ONE top winner in CQ WW SS gets paid to use his name in a Kenwood ad. It is by no means GUARANTEED that this will happen. And what about the zillion other guys who participate in the contest? They get nothing.

I participated in field day one year. I didn't win any cash. Neither did the hundreds of other guys our team contacted. As far as I know, the winning field day team got not one red cent for their troubles. :)

If you can say "In general 10 (and 11) meters works best during the
daylight hours." then the simple answer would have to bey yes. Skip
in general on 11 meters follows the daylight hours. Daylight travels
east to west. 1+1= 2

> we feel like shootin off a few hundred rounds every now and then.

0.45's are known for jamming just when you need it. The same could be said for just about any semiauto design too. People who know firearms, and need a weapon that's dependable with a low probability of jamming use a revolver design. Also 0.45's are not known for being that particularly accurate either. Picking a semiauto over a revolver may just boil down to which weapon has the larger ammo capacity, or muzzle velocity. Remember that part of the energy of the gas generated when the powder burns has to reset the slide on the semiauto thus robbing muzzle velocity from the slug. I would expect the same round in a revolver should have a some what higher muzzle velocity provided you don't get too much gas leakage around the chamber.

I though the question was for "true" CB base station equipment. Not
convertible Ham gear, which is of course illegal to use on 11m.

Tim, If you read what he said, " a 20 kw deadkey" which means no modulation he is dumping a 20 kw deadkey on you , which would have a greater ERP than a 10 kw modulated signal. So I guess that blows you guys theory of it being a ERP contest
.
I am sure we will here more excuses like you just put forth.

Propagation is one of those things that radiomen have downed a supertanker load of suds over without getting much further than the whizatorium.

My take: First off, why are you getting skip because there can be three reasons: Sporadic E, F, and F2. Makes a difference. E skip is a summer/winter thing over about 600 miles and can be frustrating as hell because it is essentially a floating mirror over your head; if you happen to be under the mirror you can hear the world and can't talk to a blessed thing. In fact, no form of skip is reciprocal; paths are generally different in opposite directions, more so on E.

Daylite skip is probably F which is why it tends to be sun sensitive. It helps if the path is largely in daylite which is why shortwave broadcast stations go to the 13 and 17 meter bands with the North American birds. You will find your best choices are stations on the far end of what you are hearing. Here again, the paths are closer to reciprocal but not exactly.

At high sunspot numbers the F layer splits and can give you skip into two places at once and F2 skip the high layer has a single hop on the order of 1500 miles so it is a fair bet you are not hearing North Americans that

way. At the other extreme, the F layer can be spotty, it is after all nothing but charged air and can be ragged at times giving you the some-all effect you notice.

As a toss-in, enjoy while ye may because you are soon going to be headed into a dead period of about 4 years on CB. The 11-year cycle has enjoyed a double peak but the bottom should start to fall out of it pretty soon.

In general, note where the DX is talking and make a similar adjustment in your scouting; if Montana is talking to Ohio, make the move West yourself. And as we approach the equinox listen for the Ozzies and Kiwis. Given the coastal interference we poor bozos in the mid-Continent have to fight for our crumbs.

I feel for you brother, you are a delusional person who needs help. I guess you proscribe to conspiracy theories and things alike, I guess your working on that Manifesto of yours as we speak. Aaron H. McVay you should be named. While your work is in vane and you claim victory for your self while posting excerpts regarding illegal CB activity, you sir can take no glory for your self but ride the band wagon. While you rob precious time that you could be spending with your family(if your really have one), you waste it here on this group. But why do you do this, your EGO..... Your ego will not allow CBer that you so much despise and like to generalize to say the least, to match wits with the almighty Voobner(if there is really such a person). Then your paranoia and ego cannot handle this reality and therefore must insist that SCD is a hired assassin to do battle with you, please.....Get a grip. While you claim to be here for the good of exposing criminals you exposed your self and your true intent and tactic, you are here to disrupted, divide and concur. Such a old method of contro and destruction.

At this time I would like to share something with you, CB radio is a BROTHERHOOD, just like any other circles of society. You have manage to sow your seeds of discontent for a season but will soon grow and exposed themselves in there true Light in due time. You are truly fearful of us, fearful that we may learn of your true reality and being. Continue with your efforts (mis)guided by a confused ego that mascarades behind a facade of truth and dignity. I like many others can see right through you shallow existence. Will your ego allow itself self to bow down and humble itself while reflecting on the sickness and hurt in you heart? Here comes the denial as you read these words, they are just words Arron remember that, just words.
ANSWER: In due season...All your Words, Ways, and Actions will come full circle. I tell you now and forever hold my peace that what ever comes to pass is the direct reaction of your own actions, no this is not a physical threat by me or any one else on this group, its a REALITY. I am speaking of the Natural Order of the Universe (or what ever you choose to call it), the pendulum swings and balance is reinstated. What does this mean to a microcosm like your self in the macrocosm of this grand existence? The shits coming down dude and it was all initiated by you and solely you. These words have been written in time and cannot be retracted, lets just hope they are wrong. Steadfast Arron H. Voobner, let your heart be balanced with a feather.

peace,
KRS

Bob are you a "Hamster" You infered in another post that you use both bands, then you call hams "Hamsters" make me wonder. Are you like Toll Free and a few other regulars here an Illegal CB Operator who hold a Ham license? Are these CBers the type of amateurs who run more than the legal limit? Outlaw CB Op's who don't regard FCC laws no matter what band they are on? You got me thinking.

Dopp:
Forget about "current" models on the market. Some of us out here are CB shops like myself, that have saved some great bases from the past! What I need to know is (a)How much do you want to spend, and (b) what do you want to use it for (ie: SSB, or just AM; just to talk on 19, or your wife in a car? Basically, IF it is made in China, DON'T BUY it! I have a bunch of new & used units from THE PAST in CB's glory days in stock, that will do you better than a lot of the current models out there now. You see, we ARE in a Depression right now. CB base sales have been DEAD for a few years now, and may be picking up again because of 9-11. Don't go to radio shack. They have JUNK from China now, where they didn't in the past. E mail me direct @ truth@planetc.com for your questions.

I might go along with this - if - the outlaw high-power CBers ever
made a sincere effort to formally "challenge" the law, i.e. petition
the FCC, involve the legislative process, modify or change the
existing laws, etc.

(Of course I am aware that a small group of CB activists attempted to
get the 155 mile DX band lifted, which in no way represents the power
junkies and 'keyclowns' agenda)

Outlaws say they are 'challenging' the laws by operating illegally.
Yet, if asked, they will not lift a finger to formally change those
laws. One can only conclude that the outlaws more interested in
"getting away with it" than in changing the law.

jabb3rw0cky,
What your describing is called 'Gray line' affect
propagation. The 'gray line' is the time between
dark and dawn and as it travels across the country,
the propagation is starting to change. The inonosphere
is starting to be ionized. It works the same way at
dusk. Duting these two 'gray line' times you can
hear all kinds of 'skip' from various parts of the
country/world.

1279. UNBELIEVABLE low-power CB dx!

Newsgroup: rec.radio.cb
Date: 2002-02-15 01:09:57 UTC
From: jabb3rw0cky@netscape.net
Message-ID: <8354e2f6.0202141709.74b3d9bd@posting.google.com>
Source record: 115591

ok, no one's going to believe this one, but here goes...

after leaving work early (4pm CST) to go pick up Valentine's Day flowers, etc., i arrive home at about 5ish and click on the Grant LT that's hooked up to the sideways Antron 99.

instantly recognize the CB "squabble" of everyone calling CQ from the East Coast, so i sit and wait for an "opening" to call cq...

...40 minutes later - NOTHING.

in complete disgust that not even ONE station heard me (hey, this happens alot when you're running at 11 to 12 watts MAX PEP), i walk upstairs, back and legs stiff from sitting on the floor in front of the CB, and start drawing water for a shower.

well, i just happen to have a HH Cobra 37ST CB sitting on the bathroom counter, and just for kicks i turn it on and place it on "the sweet spot" above the towel rack to listen in on AM Channel 26.

the time is now about 5:55pm CST, and i start hearing "Mr. 1-800!" calling from Baltimore, MD...

so, water running, and still emptying pockets of loose change and keys, i decide to key-up and talk to Mr. 1-800...

"hey 1-800...hey 1-800, this is walkie-talkie...hey 1-800?"

"hisssssssssssssss"

and then...

"hey walkie-talkie...hey walkie-talkie, this is 1-800! 1-800, Mr. Walkie Talkie you are WORLD WIDE!"

i almost dropped the HH when i heard this!

quickly turned off the water and decided to confirm this QSO...

sure enough, Mr. 1-800 was still there!

holy crap!

we not only had about a 5 minute conversation, but i also relayed messages for his friend in HOUSTON, TX who couldn't hear him, but COULD hear ME!

so how's THAT for an extreme low-power DX story?

no amps - no "pills" - no linears - no gigantic antennas

just _barely_ 4 watts on a stock CB walkie-talkie using a stock rubber duck antenna...

and, true to ionospheric skip behavior, the signal died down about 6 minutes into our conversation, and that was THAT.

1280. Re: just HOW many watts on SSB with stock Uniden???

hey, thanks for the info, Bert!

i'd always suspected the skip was allowing my tiny 12 watt PEP Uniden
CB to talk with others across the US and Canada...

not a very _reliable_ form of communication, but fun for short
conversations when you do get "world-wide".

> PEP or Peak Envelope Power in the max. power output based on your modulation.

Hi Dave!

Actually it is and it is the way I want to go. for me a HH is more usefull than a permanent mout. Once I get my truck I'm going to put a permanent mount in. I can't do it now because the way the car is designed I'll be bashing my knee against a permanent all the time. As for the placement of the HH I've got a holder that is for a cell phone connected to my dash but since I don't have a cell anymore I've been using it to hold my scanner and it works great so this would be the holder for the CB. I also found today a nice lapel speaker/mic designed just for this HH. I know it's nothing "really serious" but I kind of want something to help pass the time and keep me awake. My wife almost instantly falls asleep upon the movement of the car! I guess my biggest questions are about amps and antennas. I've been researching out antennas but haven't found much on amps. Now I kind of remember something about them being illegal at one time? Is there any truth to that?

C-ya!
Steve

> This is a CB newsgroup... "Handles" are commonly used on CB, so it is to
be
> expected on here. It is also quite common on other newsgroups and the
> internet in general.

And I don't pretend any of the names I use are my real name they are after
all Handles, to be changed at will. Then why does everyone say aaronvoobner
is a fake If aaronvoobner is his handle so be it, I looked on google and
other searches on the internet and found no brainbuster listed anywhere,
does that make it a false name, you accused aaron of having a false name
when perhaps it is his handle again. hypocritcal statement OK for the
keyclowns but not for the Anti's..

> Most (if not all) people on this ng know my first name, and are free to
use
> it if they wish.

I don't know it nor do i really care what your first name it has no bearing
on my life either way. That is your perogative to give it to whom you chose.

>There are people on this ng who have my full name and at least one ng user
has my full address with postcode. If people >need to know my name, I will
give them it.

Again Brain, you are being a hypocrite. Do you think aaron has people on the
internet that know who he is and have his address, If people need to know
his name I am sure he will give it to them.

> It is not a good idea to give out too much personal info on the
internet...
> imagine how many fruitcakes are out there just waiting for an address for
the
> next dust filled envelope.

I agree, they have already harrassed a few innocent people in Seattle
thinking it was sparky.

>
> As I said... Using "Handles" is common CB practice and common "net
security"
> practice. If you have a problem with that, then you are in the wrong
> newsgroup.

I know they are I use one daily so I don't have a problem with it at all
just some off the guys who I listed that have the problem, claiming
aaronvoobner is not real, he is as real as they they are.

> Those who do use their real name on here do it out of personal choice...
and
> they are not screaming about the use of "handles" on this newsgroup.

No its the guys who uses Handles that cry aaronvoobner is fake, as above he
is as fake as they are.

> The majority of newsgroup users do not need to keep changing the name and
e-m

> info in their header to avoid the killfiles... so, please do not class us
as
> being the same as your type that do and get killfiled each and every time.

I could care less about killfiles, I change my scren name because I can and
because it pisses guys like you off, Killfiles we both know are pure bunk
as noted when Landshark repeatedly replies to me when I am supposed to be
kill filed, there are others as well. Just like this you reply to me then
say you are killfiling me. How can I respond to your inaccurate comments if
you chose not to read mine. What do I care. Please Do not call me George

>> exist.
>
>## Dave, if you'll look closer you'll see where I agreed with the
>possibility but not the probability.

As I said before, it's not easy to positively ID a source of RFI, especially when that source is mobile. You need to record the audio, scan or SA, DF, and photograph the target area, and at the time the incident occurs, not after the fact. And then you need to conclusively match the interference with the alleged source. Needless to say, not many incidents get reported, and very few ever get solved. But they do occur.

One of the other issues is the RF interfering with auto electronics on the same or nearby vehicles. These electronics are EMC hardened for expected power levels, but not for when Harry Highpower pulls up next to you at the light. Even some older cars have had (and still have) problems with 50-100W commercial rigs causing failure of the anti-lock brakes.

>##No, I wasn't saying it had to be taken as gospel. Far from it. In
>rereading, you'll se where I agree the possibility exists. The point here is
>if the EMS system were succeptable to cb interference that same
>interference, most likely, existed before the contest and they would be
>doing something about it prior to the contest.

Problems don't always exist from the beginning. Many times they evolve because of changing circumstances. Some of the changes in the past years have been the introduction of digital circuitry into radios; an increasing number of amplifiers, with an increasing percentage of them being of higher power and poorer quality; the popularity of keydowns which concentrates interference into one specific area, increasing the probability of harmful interference in that area; the increase in the use of unauthorized frequencies; the decreasing level of technical expertise by the operators; etc; etc. The problem is just getting worse.

But in this case the problem HAS existed from the beginning. Radio interference is almost as old as radio itself. One of the first solutions to the problem was the Communications Act of 1934 and the licensing of all radio operators.

>## I'll agree that the amps are not as "pretty" as can be. I can only go by
>what you say in this regard because I haven't seen these setups in a number
>of years. I will debate the harmonics thing though. If harmonics resulted in
>ten less watts on freq., that amp would be back at the bench trying to rid
>it of those signals in an attempt to get those ten watts back onto the main
>freq.

Not unless those ten watts meant 100 watts or more on the fundamental. That's why so many of them run Class C.

>## It's funny that you should mention these companies. A couple of the amps
>that I spoke of seeing personally were actually built by a guy working for
>Harris at the time. I'm talking close to the ten kw arena. I can also say

>done the same thing.

And there are many lawmakers that are also lawbreakers. What's your
point? Did these engineers adopt the practices and techniques of the
illegals?

>## I know this happens. Can't say otherwise. I would disagree on the motive
>of the hamsters and cb'ers who do take the time and trouble to stop
>interfering with their neighbors. I would say responsibility and respect are
>secondary incentives with "just being able to talk without someone bitchin'
>" as the primary concern.

Freedom and responsibility go hand-in-hand, but what "freebanders"
want is freedom FROM responsibility. If they didn't they would find a
way to do what they want within the confines of the law.

># Dave I always consider all the possibilities available to me. I've shown

>if the moon is at the right height and there's a second teusday this week".
>Those words (paraphrased of course) are pretty much as far as the government
>wants go.

Hardly. You must not have sifted through the OSHA site, or maybe the
EPA. Ever hear of 'cancer clusters'? I doubt that any are related to
CB radio, but it proves that there is an unexplored mechanism on the
biological effects of EM exposure. That's what OSHA, the EPA, the FCC,
and even the NTSB recognize with their laws.

> Why? after all the time, expense and hoopla about this they still
>have no conclusive evidence to support your contention.

I think that those laws are on the books because they have enough
proof to warrant at least a serious concern.

<snip>
Interesting concept: The rules are made by the will of the majority, and
the will of the majority is to violate the rules. That creates a bit of
a paradox, huh?
-
You're learning.

And you're not thinking...

-Enlighten me, then.

You attempt a presentation of a given paradoxical situation that applies
and exists because the will of the majority DO violate rules, whatever
they may be..
Not the majority of RULES, but the majority of PEOPLE violate some rule
or law or variation of on a fairly regular basis. The US incarceration
rate and sheer volume of US citizens caught in the penal system compared
to anywhere else in the world confirms this.
-
Just because a majority of people may violate a majority of the laws
doesn't mean that the majority of the public is opposed to those laws;

-Sure it does. The only other possibility may be that the majority is
hypocritical and break laws they feel only others should be punished
for. This you relate to?

but any one person may (or may not) be opposed to whatever law they
happen to violate, in which case you have not proven that the violators
of any specific law are a majority of the public.

-Nor was the opposite, as you so allude above.
Also, we were not speaking of people in the singular context, but of
majority. We may address singularity opinion as a topic if that is what
you wish, but that is another issue.

If they were the majority, then they would be able to get the law
changed legally,
and then would no longer be in violation of that law.

-Not true again. The majority of people don't vote. If the majority was
registered to vote, then they COULD get laws changed, but here is where
the apathy comes into play.

And with respect to the topic, they would have to look for other laws to violate in order to get their kicks. Either way, that's no excuse for the violation.

-Where is this going now? This isn't and wasn't about "kicks."

  The rules and legislations being passed today are not made by the will of the majority of the people, but rather the will of the ruling minority (compared to the majority of all), who are not elected by the majority at all.

Quit smoking that funny stuff, twist. Just because you have some sort of personal grudge with the system doesn't mean you have to make up paranoid delusions.

-Haven't indulged in quite a many years. Blaming me for your lack of being able to follow simple voting ratios is one of your finest slides, yet. May even be effective with some.

They may not be elected by THE majority, but they ARE elected be a majority of the voters.

-No argument there.

That, and the fact there are people like you in our society, is a very good reason for everyone to get out and vote.

-Pretty ironic, considering it was hypocritical actions (remember the postings of emails?) by individuals such as yourself that is responsibe for the youth vote that is about to take this country over any time now and I'm old enough to realize it. Thing is, so are you.

Tim, the point being ERP is not the main issue with how a keydown is judged if you drop a 20 watt deadkey and the competitor has a 10 watt modulated signal, it makes no difference the modulation will be the deciding factor not the erp and this is done by over modulation which causes distortion which enhances harmonic content so here we are back to the same harmonic issue.

In my experience that is exactly correct. You'll hear and talk better
to the East before noon and to the West after noon, but it's not
engraved in concrete. Some days teh Western skip will come in before
10 a.m. Some days the East skip will stay in after 2 p.m. It's at the
whim of the DX gods.

The problem (I'm guessing) with field strength measurements is the take-off angle. One station might have a lot more erp, but if the take-off angle is too high or too low, another station might have a stronger signal at the receiving end. Remember Radio Moscow? They effectively controlled the take-off angle so as to put the maximum amount of smoke possible into the United States. As a kid, I built a one-tube regenerative receiver and managed to get the tickler coil backwards. Radio Moscow came in loud and clear despite the error (a lot of other stations did too, once I reversed the tickler).

What you are missing here, twist is this: Because a person breaks one law does that mean he is opposed to all? Of course not. Does that mean he is opposed to the law he violated? No, not necessarily. All it means is that he violated a law.

And I won't even argue with you on if a majority of people break some law at some time in their lives, because they probably do. But I will argue with you on your inference that the majority of people do not want laws at all. The only people that don't want any laws at all are people like you, twist, and the majority is happy that you are not the majority.

Either way, the paradox still exists. If the majority want no law at all, then the will of that majority would become "the law", a law which contradicts it's own purpose. Is that such a hard concept to understand?

>> but any one person may (or may not) be opposed to whatever law they

The same problem occurs regardless. Since they all are required to
transmit at the same angle whether it's some dumb cluck at the other
end of the parking lot in his car or some dumb cluck at the other end
of the parking lot with a FSM, the competition is still as fair as it
was before. Regardless, how much difference is the take-off angle
going to make at less than 100 yards?

I suspect that if the FCC keeps ignoring the CB and freeband, they may lose their ability to control the ham bands due to preferential enforcement; i.e, no more 10-12m bands. Riley avoids the issue of freebanders on the ham bands by calling them "unlicensed amateurs", but I don't think that will hold up if someone takes it to court.

That should keep some of you busy for a while. And with that thought I'm back to sandbagging.

Not at all. When VHF repeaters became fairly common and reliable the need to coordinate with the locals dictated the choice. Once the repeaters are up, doing computer data thru them and to the state capital via microwave or fiber optics these days became pretty common. In this particular case, the total system dictated the solution and repeaters which made no sense in 1960 terms became the state of the art by the 1990s.

The Forest Service is still pretty much doing what it did in the 60s and is likely to be doing it for some time. To talk from a HQ tower to a truck is still best done on lo-band where the truck may be in some different part of a very large forest every day. There is not a need for data transfer like looking up a car and driver, and there are precious few people you need to talk to or for that matter exist in a large national forest. Sounds like you need maximum mobile coverage and for that the lo band is a pretty decent solution just as it was when the Missouri HP did its thing thru a few very large towers across the state.

The key thing is the idea of a total system

why do you people keep calling those that encroach upon the ham bands as free banders? that is silly.....free banders operate in the "free bands", that is, non-ham assigned frequencies. those that operate illegally in the ham bands are not "free banders". can you dumb asses please get it straight for once? your as bad as the stupid liberal media that consistently mix up auto-matic weapons with "fully-atuomatic weapons" as if they are the same thing.jesus...the state of our educational system is worse than i thought.

Looks like QRP and propagation win the day again...

Happens alot on the HAM bands... I work worldwide on 100 watts all the time, against stations running full legal limit, and I've got my fair share of overseas DX QSL cards...

Just goes to show that power isn't always the answer...

As for the Antron, you said it was mounted sideways... Most CBers use vertical polarization (antenna straight up and down)... and not "flatside" or horizontal polarization, especially in the mobile. There are exceptions, such as those using "flatside beams". If someone you're trying to call or hear is vertical, and you're horizontal, you're losing AT LEAsT 20 dB both on receive and transmit. Every 3 dB is 1/2 your power... so you're cutting both your receive and transmit by over 64 times! That means if you're pushing 4 watts to the antenna (neglecting losses in the feedline and surroundings), you're effectively putting less than 0.0625 watts out, according to the stations you're trying to transmit to... The same "loss" applies to your receive...

1304. *****RRCB PICNIC!*****

Newsgroup: rec.radio.cb
Date: 2002-02-15 04:14:57 UTC
From: voobner@yahoo.com
Message-ID: <fbc7a2.0202142014.2ac1e9cb@posting.google.com>
Source record: 115666

You know, as I was reading this newsgroup two things occurred to me, and the first was that we have been here in rrcb for quite some time together. For better or worse, we are like some kind of big, dysfunctional family. For example, I have gotten to know when Train is in a bad mood (he uses profanity and calls me "douchener"). And I can always tell when Twistedhed is lucid (his posts make sense) and when he is on some kind of medication (his posts tend to be disjointed rants). I can also sense when Toll Free pops a gasket and throws the computer across the room because someone has disagreed with him. In short, I have become tuned-in to the ebb and flow of moods in the group. During this same flash of inspiration, I also realized that that our interaction would have quite a different dynamic if we were all face to face, rather than communicating through disembodied computers in the impersonal environs of cyberspace. Then, like a bolt from the blue, it came to me. What if we WERE to get together in the same location? What if Sparky could sit down over a pitcher of beer with Toll Free? What if Leland and Twistedhed could break bread together? What if we held a....

.....REC.RADIO.CB PICNIC!

I know...it sounds impossible, even crazy. But hear me out. What would you give to meet old Voobner in the flesh? Would you spend $100? $200? Is it possible that we could bring the far-flung personalities of rrcb together in some central location for a mimimum travel expense? Group rates, for example, could defer the high cost of someone coming from, say, Spokane WA, or Tampa Bay FL. The other possibility is to get a grant that would fund a psychologist to study our group, and provide us with a budgetary allowance for the subjects travel and accomodations.

Everyone would be invited of course, but as an absolute minimum requirement, the core 'regulars' would have to commit to attending this event. Sparky, Train, Toll, Twist, Dick McCollum, Jeff, Jerry O, Dave/Debby, Doc, Leland, Landshark, Tim Nebo, George, Dave Hall, Mopar, Tnom - (I'm sure I'm inadvertently leaving some people out) - oh yes, and of course, we would have as our guest of honor - N8WWM.

A few ground rules: the picnic would be strictly neutral turf and a formal "cease fire" would exist. If Nebo wanted to snort coke and flash his Glock, or Train wanted to key up his 100,000 watt noisemaker, no one is going to bring the authorities down on them.

August would be a great time to do it, as that's a popular vacation month. I'm thinking of a 2-day affair, most likely at a hotel or conference facility; but it could just as well be held in some outdoor

setting, a city park for example.

Picture it....Dave/Debby flipping steaks on a grille.....Leland and Twistedhed tapping an ice cold keg of beer.....me and Train hunched over a copy of Part 95...it would be.....a UNIQUE and EXTRAORDINARY experience, to say the least.

I give you my word I'd be there; I wouldn't miss such an event for the world. So whadya think? Ideas? Thoughts? Recriminations? Bring it on!

-Aaron-

You got
> me thinking.

Hammy,

I confess I know nothing about the other folks you've mentioned.

I "was" a hamster as a teenager. I let the ticket slide about 10 or so years ago. I did keep up with trends and equipment for awhile afterwards. I found that I no longer enjoyed the hobby due to the influx of the "new breed" and the style of operation of the "older breed" becoming similar to that of the new blood.

During the first couple yrs as a hamster, I participated in all the events either as part of a club station at first and then later as a single op. I stopped participating in these events when this booming realization finally hit me. I was trying to have a conversation with a few buds on 80 when the contest began. All into the night we fought off interloper after interloper trying to keep a conversation. It very quickly dawned on me that I really couldn't bitch too loud about those contesters because...they were me..up till then. Never have participated in those contests again. But, each and every contest thereafter was my penance. In order to enjoy our "roundtables" I had to put up with the likes of me at an earlier, uneducated time. So, I do "know" what transpires during these events. I knew the people and their equipment and capabilities.

I was a cb'er before a hamster and all the while I had a hamster ticket. I fixed, modified, designed and built whatever. I was doing mods on equipment before and better than any of those cheater books. I had to figure them out myself because there were no cheater books avai lable at the time. I built and ran some of the higher power ham and cb stuff even by today's "standards", although, the stuff that I built did work as well as any commercially designed amps. Shootouts and keydowns were never high on my personal list of priorities. I just

wanted to have "more" of the good stuff.

Around the same time I began to give up on hamsters I also discovered I'd had my fill of CB. This was another, similar revelation. I found myself getting ready to battle with some folks over the continuous bleedover I was getting from a couple ch.'s away. I knew these people were running some shitty amps and someone had "tuned up" their radios. I then realized that I couldn't bitch about it. Although it wasn't my work, I was doing similar things for others. Again, I became my own worst enemy. That pretty well ended that.

Yeah, I never got along with rules and regulations and confess that, short of actually participating in cb keydown contests, I've done it all. I guess I fit into the category of "Criminal Element Radio".

So today, you won't hear me touting the virtues of hamster radio or bitchin' about cb. To me, they've pretty well become the same. You have the same operating practices on both sides. One side gets away with it because it's been ordained legal and the other side gets away with it because there's just way too many doing it to catch.

The only thing you will find in my posts here is my dander when self righteous hamsters start coming down on cb'ers for doing the very same things they do...or have done. Additionally, I will also make my thoughts known when I see guys like Dave (he's not alone) getting lost out there in the "realm of infinite possibilities" without keeping his statements within the "realm of finite probabilities".

That's about it in a nutshell.

About the last thing I wanted to say was No, I don't have a radio business. I have nothing to gain monetarily by posting here. I really only wanted to see technical discussions to keep me abreast of techniques and maybe give someone a hand on the older equipment I still remember something about.
BobC

Years ago I got off the bus from high school, fired up on 6 meters just in time to hear a monster AM signal tell the world 'to hell with you Yanks I'm going to bed' from what is now Zambia. Let the man go, Chris, he just experienced the kick radio has to offer. That it is pretty common is true but not to him. Few more years he will be in there with CQ Contest.

Polarization is of interest only on local stuff. By the time a signal does a multihop only God knows what its polarization might be. And the effects get worse with frequency to the point where some satellites transmit two FM downlinks on the same freq and let polarization and the capture effect sort out the survivor. And you generally get a tad less manmade noise on the flat side. For DX, machts nichts.

Isn't this just what they call grey line propogation? Something I've noticed
on the lower freqencies too - like 40 and 75 meters - although usually in
the evening.

Michael Jantzen ^_^

Interesting thing about sattelites - is that the uplink is usually polarized differently from the downlink :). I've never heard of a sattelite that has two downlinks on the same frequency though :(.

http://www.arrowantennas.com/146-437.html - just for interested cb'ers - here's an antenna that you can use with ao27 (a FM phase 2 [I think] sattelite) that is easily workable with a 1~2.5 watt handheld radio. Its quite fun actually - much easier to use then ao-40 or rs-12.

Biiiiithchen!

We could fire up the ol Barrbie, chicken, steaks, hamburgers, hot dogs, Sch-Ka-Bob, plenty of BBQ sauce on everything. Home made BBQ beans, salads, side dishes, home made ice cream and cake.

We can have our own special name tags made up:

RRCB Picnic
I Made it
(Name goes here)
Fucking ah, I am # ___

Arm wrestling, spit distance competition, beer can stacking, mobile linear amplifier - alternator - antenna and all the other stuff car show type of thing.

We could bring a Base Antenna, run the ol generator and power up the base amp, shoot skip, talk to all the channel 6 guys, do some SSB skip shootin on 38 LSB.

Or even..... YEAH! we can have us a big ol Shootout and Keydown, BBQ, Drag Race, Square Dancin, Both kinds of Music, Skip Shootin Contest, the HOLE THING!!!!!!

We would want this near some sleazzey bar, so that we use the phone and pick up women, and use the bathroom.

When and where?????

Jay in the Mojave

Anytime,

Many others have discovered that the US 11-meter CB allocation is smack-dab on HF frequencies that support worldwide propagation. Thus 11-meter "hobby radio" was born. While I certainly don't encourage out of band ("freebanding") operation or illegal amplifiers, violation of the ridiculous 155.3 mi. limit is what drew some of us to radio as a hobby in the first place.

When you limited to 12 watts PEP, you start researching other ways to improve your signal. This usually takes the form of improving your antenna system and reducing losses. (Better coax, etc.) Then there are actual DXing "techniques," such as "tail-ending." Many years ago, I'd read about it in QST magazine and actually got a chance to see it work. I'd heard a faint signal pop (...more like fade) in and realized that it was an US operator transmitting from Kadena AFB in Okinawa, Japan. Holy cow...a genuine "JA" 11-meter operator!!! Well, needless to say the entire east coast tried to grab her (Yes, her.) attention. Many were running 100 watt FT-757s and TS-140S' so I waited until the last fellow called and threw out a quick call with numbers, name, and QTH. Nothing long winded. Well, I got the return call, worked her, and left the mess for the rest. The propagation gods smiled on me that morning...and it was so early that it was still dark outside, go figure. Good luck with that Uniden. They make awfully good units. I wouldn't be surprised if that Uniden eventually leads you toward an Icom or Kenwood and a whole other world of hobby radio. Take care now.

Most of the local guys in my area run field day, not for the hope of
winning, but for the excuse to sit under a tent and drink beer all day
long. They have a lot more fun than some of the "stuffed shirt" groups.

THATS working radio, anyone can talk around the world with power, it's much more exciting and rewarding doing it in this manner related above.

Again, there is a difference between a 1KW ham station, and a 20KW
mobile keydown. People standing on the ground, are not in the direct
path of a ham or commercial broadcast station. The same is not true at a
keydown.
I have a friend who tried to videotape another guy's corona discharge
from his "keydown mobile". He was standing 50 to 75 feet away and
everytime the mobile keyed, the video camcorder took a dump. I've never
been able to affect a camcorder with any of my ham equipment, so one has
to wonder just how much near field RF was being absorbed in the
immediate vicinity of this "high power" mobile. It's not just the power,
but the proximity to the antenna.

> > >
> > > These stations operate on a year round basis (more or less) in these

>
> ## I confess I don't understand what you mean by "moral equivilency" in this
> regard.

The "moral equivilency" tactic basically states that "X" activity should
be as good/bad because "Y" activity is also good/bad. The problem is
that often the conditions, or context of the activity compared against
provides mitigating circumstances that influence the reason why it is
"good/bad", which usually makes for an unfair comparison.

In this context, you make the point that keydowns should be allowed
since hams also use high power. But you fail to consider the points that
hams are supposed to be more technically responsible, and that there are
still specific FCC rules that allow hams to operate. Wheras CB
keydowners are operating purely illegally.

> Hams have only recently been mandated to use any degree of exposure
> guidelines and most, I would bet, don't have a clue how to interpret the
> guidelines nor test for them. If there were a real problem it would have
> surfaced by now. And how do you know those high power cb's aren't close to
> being within those guidelines? Remember, there different standards regarding
> type of operation.

The RF exposure "problem" itself has only recently been uncovered and
given any serious consideration. It is unfair to make a generalization
that hams "don't have a clue" about testing for it. Any serious ham,
that's above "appliance operator" status should understand what's
involved.
And once again, there is a big difference, from an exposure standpoint,
between radiation from an antenna 30 feet in the air, running 1KW, and
one less than 10 feet high with 20 KW behind it.

>

> it wasn't right.

Another example of the "moral equivilency arguement". Dumping tea in the
bay has nothing to do with radio. It does however, underscore the
justification that many hold for arbitrarily breaking laws that they
personally have a problem with.

Keeping with the "moral" theme though, answer me this; what benefits
does an RF keydown bring to society in general? Instead of trying to
justify why is should not be allowed, give me a good reason why it
should. Dumping tea into the harbor was a protest of taxation without
representation. A cause that was shared by many people back then. Other
than making the "I'll do what I want, when I want and F*ck anyone that
tries to stop me" statement, what cause do "keydowners" champion?

> doing something about it prior to the contest.

A 4 (or 100) watt signal may not be a problem. But running 20 KW changes
things. It may be the sheer power than casues the problem. There may not
be a problem until the "Keydown" is in progress.

> > "Correctly" is a matter of debate. High power junkies are only concerned

> it of those signals in an attempt to get those ten watts back onto the main
> freq.

I was refering to the loss that an inline filter might add. If filtering
out harmonics resulted in 10 watts less total power (at the fundamantal
due to loss), they would elect to NOT filter the harmonics.

Sure, there has to be some level of technical competance. But there's a
difference between designing and building to company specs (with a
company budget), and throwing together a bunch of second hand parts on
your own nickel.

You and I have much in common. More than you probably realize. I was
never into contesting, but I always enjoyed roundtables. Still do, which
is why I stay on VHF.

I started in CB in 1970. All though my teenaged years, I learned about
RF and electronic theory and practice, by experimenting with CB radios.
I became the local "tech" and did all the mods and work for our local
group and many truckers.

>
> Around the same time I began to give up on hamsters I also discovered

> worst enemy. That pretty well ended that.

That revelation was called maturity. When I was a "kid" I didn't care
about the rules, only what I could do within my own limitations. I was
caught up in the self-centered universe, that's typical of a teenager. I
probably created many "splatterboxes" in my day, before I had my
"revelation". I am now on the other side. I was now the one getting
annoyed by the noise toys, overmodulation and other hash and trash on
the band, that we all thought was "cool" in the 70's. Now I'm like a
reformed smoker, or a born again. I've discovered just how selfish and
irresponsible it is to cause this much interference to other people, who
are only trying to have casual conversations.

>
> Yeah, I never got along with rules and regulations and confess that,

Thanks to a decline in moral values in society itself, as well as a
ridiculous relaxation of the theory tests, ham radio is only a shell of

its former self. The same self-centered, inconsiderate idiots can occupy the ham spectrum as well as CB.

>
> The only thing you will find in my posts here is my dander when self

> statements within the "realm of finite probabilities".

The difference between a long shot possibility and a real probability often depends on the circumstances. We make rules to protect us from those possibilities. There are backup systems on aircraft to kick in in case the primary systems fail. They may never be needed, but if they ever are, it's nice that someone had the forethought to consider it.

>
> That's about it in a nutshell.

Bob, Truth be told, I really don't have a problem with freebanders, or the practice of the RF version of a tractor pull. What I have a problem with is the "in your face" attitude that seems to proliferate among those that hold little regard for the rule of law.

We used to break the rules back then, but it wasn't so blatent. We were always a little paranoid that the FCC would send one of its "little white vans" to sweep the area. We tried to keep our activities to a low profile, and tried not to attract too much attention.
Now the attitude is more like "Yea I break the law, so what?" and "So I cause interference, F*ck em'". It's not the breaking of the rules as much as the total lack of courtesy and consideration for other people, who are also trying to enjoy their form of radio.

I sincerely hope you meant to say semi-automatic the first time?

It's not the "stupid liberal media" that has it confused, it's the
DEA, ATF, and Congress. The media (which is predominantly conservative
but still stupid) simply prints what the government hands them at the
news conference.

And they're "freebanders" no matter what non-CB frequency they're on,
whether 10m or 80m.

Cool. The guy running the electronics lab here likes to go target shooting
with his son using their shot guns. And another buddy of mine here at work
is also a gun nut too. Seems like when he was in the military he had
competed in contests as a sharp shooter. Guns are fine so long as they are
treated with respect. It's the person behind the trigger you have to worry
about. 8-))

One of the cable channels just had a program on about some high school kid
who had a website setup describing how he was stalking some chick, and how
he was planing to kill her. Nobody took it seriously until he capped her.
The web page is now gone and people are asking how come nobody took the crap
the kid wrote seriously. I think people are going to be looking more closely
at stuff like that on the web. Seems like you never can tell when somebody
is going to blow a gasket and start killing people.

Hi,

I've asked a few times with no success. I'm beginning to think I have the "only" model made or left. Surely someone has to know something! Midland doesn't have it either, I've already tried.

I'm in need of a schematic for a Midland 77-151 (151M). IF that isn't possible, one similar to it. IF a "similar" model is in a Sam's, please let me know which one. I have 85% of the Sams printed. It isn't in them. I'll look to buy whatever edition I'm pointed to - next, that the similar set appears in.

Thanks for your help.

Matter of fact I have, but I don't own one however. Yes a 0.22 can kill.
Also those slugs can do very strange things too. A few people shot in the
head had the slug follow the curvature of their skull and come through the
scalp out on the other side believe it or not. My X-wife got to talk to some
of those lucky people when she worked at the county jail interviewing the
inmates.

That's how one pirate CBer I know got busted by the FCC twice. It was the next door neighbor's TV he was messing up. And yes he was using modified Ham gear at the time too. Several Hams, including myself, have tried to get him legal by urging him to get his Ham ticket. Still doesn't have one and is still playing a game of chicken with the FCC by trying to operate only mobile now. It's only a matter of time before he gets his NAL from the FCC and figures out they're not joking around.

A few months ago someone had a problem with a Pace Sidetalk 1000M. Apparently, there were was a 23ch and a 40ch with the same model number. But Sams only listed the 23ch model, although they also covered a 1000MC, which I suspect was really the 40ch 1000M. I don't think this is the same radio with a Midland name, but it wouldn't hurt to check it out.

Bob, Truth be told, I really don't have a problem with freebanders, or the practice of the RF version of a tractor pull. What I have a problem with is the "in your face" attitude that seems to proliferate among those that hold little regard for the rule of law.

-Proliferate? The proliferation of "in your face" attitudes are right here on this board by anticbers. You can't even mention an amp question or talk about a nonallocated cb frequency without one of these anti's being "in your face" about legalities. When they come at someone like a ton of bricks in the manner they do for asking a question that when actually applied may break an FCC rule, what do you expect in return? Tea and crumpets? The "flaunting" is a direct result of the badgering, not a precursor.

We used to break the rules back then, but it wasn't so blatent. We were always a little paranoid that the FCC would send one of its "little white vans" to sweep the area. We tried to keep our activities to a low profile, and tried not to attract too much attention. Now the attitude is more like "Yea I break the law, so what?"
and "So I cause interference, F*ck em'".

-More bullshit. Maybe you are referring to a personal isolated experience concerning the interference, but who posted anything in this forum that would even remotely support that notion? And the "F" you attitude is thrown back at those who accuse us all of being cb and linear dealers and freebanders capable of taking over the Earth, stealing your land and shooting your children. It's a polite way of reminding those who feel it their place to tell us what we should and shouldn't do according to their armchair lawyering and interpretations, of the esteem we hold them in.

It's not the breaking of the rules as much as the total lack of courtesy and consideration for other people, who are also trying to enjoy their form of radio.
Dave
"Sandbagger"

-It's the same as usenet. No one is forcing you to stay on the frequency if you don't like what you hear. If you can't handle the posts, skip them.

From: sparky@cet.com (Sparky)
On Thu, 14 Feb 2002 20:38:48 Sparky wrote: Just because a majority of people may violate a majority of the laws doesn't mean that the majority of the public is opposed to those laws;

-Sure it does. The only other possibility may be that the majority is hypocritical and break laws they feel only others should be punished for. This you relate to?

What you are missing here, twist is this: Because a person breaks one law does that mean he is opposed to all? Of course not. Does that mean he is opposed to the law he violated? No, not necessarily. All it means is that he violated a law.

-Not according to your posts. You have claimed, and agreed with some infamous others, ignoring laws is a form of anarchy. You have absolutely claimed that he who discriminately breaks laws is a criminal and deserves no respect. Hypocrisy seems to rear it's head again. It doesn't apply one way to one and another to yet another.

And I won't even argue with you on if a majority of people break some law at some time in their lives, because they probably do. But I will argue with you on your inference that the majority of people do not want laws at all.

-As always when losing ground, you rapidly retreat to a fabrication of a false allegation and attribute it to the one that pointed out a view you never considered. I never made an inference that the majority do not want laws, you simply claimed I did. I claimed the majority break some type rules (laws as you like to refer to them all) on a regular basis. How trivial, is irrelevant.

The only people that don't want any laws at all are people like you, twist, and the majority is happy that you are not the majority. Either way, the paradox still exists. If the majority want no law at all, then the will of that majority would become "the law", a law which contradicts it's own purpose. Is that such a hard concept to understand?

-Of course not, which is why I fail to understand why you fail to comprehend it. Your above paragraph is so far removed from your original claim, you should take another few days off <g>.

  but any one person may (or may not) be opposed to whatever law they happen to violate, in which case you have not proven that the violators of any specific law are a majority of the public.

-Nor was the opposite, as you so allude above.

The opposite? A majority of laws being violated by a specific person? I 'alluded' to nothing of the sort.

-Certainly you did. You said, and I quote, ",,any one person."..... ONE person refers to the singular.
Also, we were not speaking of people in the singular context, but of majority. We may address singularity opinion as a topic if that is what you wish, but that is another issue.

I can see how you might be a little confused, so let me clear this up for you: When speaking of a majority, it's useful to use the opposite as a point of reference or comparison. If you wish to substitute the word "minority" for my reference to a single person, then by all means do so, just as long as you are not confused any further. If they were the majority, then they would be able to get the law changed legally, and then would no longer be in violation of that law.

-Not true again. The majority of people don't vote. If the majority was registered to vote, then they COULD get laws changed, but here is where the apathy comes into play.

Which is what I specifically stated below, and to which you agreed. And with respect to the topic, they would have to look for other laws to violate in order to get their kicks. Either way, that's no excuse for the violation.

-Where is this going now? This isn't and wasn't about "kicks."

The original topic, in case you failed to read it, was a lame freebanding excuse, not unlike some of the excuses you have contrived yourself, twist.
=A0=A0

-The rules and legislations being passed today are not made by the will of the majority of the people, but rather the will of the ruling minority (compared to the majority of all), who are not elected by the majority at all.

Quit smoking that funny stuff, twist. Just because you have some sort of personal grudge with the system doesn't mean you have to make up paranoid delusions.

-Haven't indulged in quite a many years. Blaming me for your lack of being able to follow simple voting ratios is one of your finest slides, yet. May even be effective with some.

They may not be elected by THE majority, but they ARE elected be a majority of the voters.

-No argument there. Already stated it for you.

That, and the fact there are people like you in our society, is a very good reason for everyone to get out and vote.

-Pretty ironic, considering it was hypocritical actions (remember the postings of emails?) by individuals such as yourself that is responsibe for the youth vote that is about to take this country over any time now and I'm old enough to realize it. Thing is, so are you.
-
WTF are you talking about, twist? Where is this going now? (Hmmm, didn't I just read that somewhere...) Do you want to talk about the email you sent me as 1mangang? Or would you rather start with your accusations that I was forging posts, while at the same time you were forging as N7VCF? You claimed to have polite conversations with him, but did you happen to disclose to him just what you wrote in those posts using his callsign? Sure twist, keep spinning the subject around to something that will eventually burn your butt!
-
-Spinning? You went so far off subject you are now resorting to year old forges and headers to change the subject. Crosspost them while you're at it, why don't you? See if you can't get me into one of them hammie rooms! <g>
What this all has to do with is the younger crowd is swarming DC and the precious spectrum means only one thing to them..bucks, big daddy greenback type bucks, mucha cash and your imaginary hammie war against all us hardened cb criminals is great fun for some in our spare minutes, but this is where it ends, not begins. Your voices get weaker by the hour.

Ken's Electronics lists the following:

77-150 Sams 281
150M Sams 281

No mention of a Model 77-151 or 151M.

On SAMS web page, there is mention of a "Steelman 151M" found by using their search feature. SAM'S # 223-11. I do not know if this relates to your radio. Perhaps another manufacturer made it before / after Midland?

It would be a perfect two way street if the mirror were parallel to the Earth at all times, but it rarely is. At times it will seem so but this is mostly a case of a big even layer. To be skipped a wave must come in at a fairly narrow range of angles (why there is a skip zone at all) and it is more than possible that a slight tilt in the layer may make the paths non-reciprocal.

> going to make at less than 100 yards?

Keep a several things in mind. The antenna radiation pattern is 3D, and the field strength will vary as you move back and forth from the antenna. One cause of that variation is the old inverse square law effect, once you're outside of the near field of the antenna. The second is the changing angle of the measuring device relative to the antenna. If the setup is a high gain configuration a change of a few degrees could result in a dB or more difference in field straight. The same could be said about walking in a circle around a given antenna setup. Vehicles sporting multiple vertical antennas can have a rather complex field pattern. Without extensive measurements all around the antenna system, or computer modeling, you really can't be sure were all of the high gain lobes are in the field pattern. A few degrees off could leave one making a measurement in a null spot in the field. Last but not least those antennas are typically only a few feet away from earth ground. At H.F. the antenna needs to be a distance above real ground so that it has little to no effect on it. Considering they are mounted a vehicle on some 3 to 8 feet above earth ground the earth ground will also a very big effect on what is measured.

Even the companies that design, build, and sell antennas have a bit of trouble making good antenna measurements. And that's on a dedicated antenna test range too.

Source record: 115613

Seeing you and talking with you might be two different things if you cannot get a signal into the mirror at an angle it will reflect. Mirrors are perhaps not the best analogy but there are such things as one-way mirrors.

And the reflection process is not quite the same; a signal may travel along the reflective layer for a ways before being reflected down. That this process would not be reciprocal is obvious as it cannot be high noon everywhere
on the path.

Wave propagation is not an exact science and the guys who were really good at it, the people who did the work for RCA Globecom and TRT, etc. are more than likely long since dead. But I will tell you they often used non-reciprocal paths.

Am I missing something in this discussion? Back when dinosaurs roamed I engineered for an FM outlet that got about 5500 watts out of a 4CX5000A into a five-bay resulting in 25,500 ERP.
The five bay managed to compress the pattern into a more-or-less horizontal direction that made the pattern, IN A GIVEN DIRECTION, look like 25kw into a vertical dipole. That is all gain and ERP means or ever meant, the gnomes do not come out at nite to fix your shoes and power does not come out of incantations or recipes for the Holy Hand Grenade.

That field strength at a keydown might be a bitch to measure is undeniable but what what in hell do you know when you have measured it?

Maybe I'm not making myself clear. If the only difference in the
contest is the replacement of the receiving CB radio with an FSM,
isn't all else going to be the same? including the take-off angle? Or
was the topic really about measuring the comprehensive field strenth
of a signal and I just misread the post?

Similar, except that we weren't exposing casual bystanders to dangerous levels of RF. Guys engaging in keydowns can make the claim that they will deal with the long term health effects on themselves. But they are also exposing innocent bystanders, who may not have the slightest notion what it is that they're being exposed to.

If you want to host a social gathering, you owe it to your guests to not expose them to something potentially damaging to either their health or safety.

Twisty this has got to be the lamest excuse you have put forth yet , So
because Aaron or anyone els complains that freebanding is illegal and thet
you guys openly encoraged the breaking of Federal rules that is why you
freeband? or why people run amps? Twitsy there has been freebanding and that
in yourface attitude long before Aaron or any one else who promotes Legal CB
Radio ever made a post. Like I siad that sure is a Lame ass excuse for this
type attitude. The Anti's have every right to promote Legal CB when people
talk about breaking FCC Rules. Ask yourself a very simple question. Why do
the Anti's speak out about Legal CB? Because they care what happens to
others and the 11 meter band, Now ask your self this question why do you
break FCC Rules and talk about it openly? Shall i answer for you, you are
ignorant and self centered and only care about yourself you don't care who
you are hurting or who you are corrupting with Illegal Cb facts .

> -It's the same as usenet. No one is forcing you to stay on the frequency.

More Twisty Bullshit no one is forcing you to stay on frequency?, no but
they are certainly forcing legitamite users off of frequencys just like
street thugs you take what is not yours and chase the rightful people away.
They have a right to be there you as a freebander and power monger have no
rights all though you think you own the airwaves.

Oh no.... No way am I going to believe for a minute that the whole attitude of "the outlaw crowd" was a result of legal "taunting" by those that make it their life's mission to remind us what the rules are. No, it's more like if these "outlaws" were not so blatent in their pursuits of these illegal activities, they wouldn't have caused the backlash that they did, by the people that still respect the rules of common courtesy, if not FCC rules. The difference is that on the radio, a 4 watt "mud duck"'s complaints are easily overpowered and ignored. On usenet, we're all on the same footing. There is no power to turn up to drown out dissenters.

This newsgroup is only a small segment of the radio crowd in general. I am basing my viewpoint on my experiences as a RADIO operator, not as a newsgroup junkie.

>

Again, this is based on real world radio experience. I could key up right now and ask some loud mouth skip shooter to back it down a bit,

and he'll "politely" tell me to go shit in my hat. THAT is why we're fed up with illegal outlaws.

>
> It's not the breaking of the rules as much as the total lack of courtesy

> them.

See, you've made my point. The "If you don't like it, turn it to the left" attitude. It's EXACTLY this attitude that has created the backlash against the illegals.

Suppose I don't like it, and decide to put a bullet between your eyes to solve the problem? I suppose you'd hide behind the laws then wouldn't you? But by your own logic, one illegal act to correct another one is perfectly acceptable. That was my whole point when I was discussing the "anarchy" angle some time back. Once you lose respect for the principles of law, it's only a matter of time before you justify, to yourself, breaking of more serious rules.

Let me try and make this even more simple. If a keydown contestant wants to win, he will strive to direct all his RF at the intended receiver, right? And the receiver is sitting at the other end of the parking lot, right? Now if the receiver is replaced with a FSM, why does take-off angle suddenly make a difference? If ERP is partly a function of directionality, and the directionality has been previously established, why should anybody worry about take-off angles any more than they did before?

Is this clear yet? I'm not trying to be sarcastic here, just trying to get my point across.

Sparky, I am not sure where take offf angles etc got throw into the picture
but I don't think ERP is what these contests are judged on even though Toll
Free and Tim seemed to think so. Audio is a huge part of the game thats what
distinguishes one from another the strongest signal does not always win If
that was the case these guys wouldnt be concerened about removing limiters
and using class C amps.

Sparky, as far as I know, the receiving station in a "keydown" is not
placed at the end of the parking lot. More like 10-15 miles away.
The Wash DC affair was held in MD at Traceys Landing, and the
receiving station was in Waldorf. (Get a map and draw a line from
point to point. Lots of RF was passing thru lots of people [including
a grammar school] who weren't aware of it).

Dick:

Nice story about Zambia. I don't play much on 6M anymore, but when I did, and when the band was open, I had ALOT of fun with it!

I wasn't degrading his experience at all; that was not my intent. I was simply pointing out that 1: it doesn't take power to talk skip (I've done it on 2 watts AM with a dipole on the side of the truck), 2: his antenna mounted "sideways" is less than optimal for what he's trying to do, and 3: he did a good job on that HT.

Well, there is that truckstop off the 80 in Grand Island, NE.. That's almost central to everyone in the continental US, and they have a big lot behind the main truck parking that they might let us use... We could even buy some of the groceries there.

Lure? Nah, it was the actual act. I was running my first SSB rig, a
bone stock Royce 639 at a whopping 12 watts PEP. My first DX contact
was with a fellow in Texas. Actually, I didn't know his QTH until we
were in mid-conversation.

> > When you limited to 12 watts PEP, you start researching other ways to
> > improve your signal. This usually takes the form of improving your

>
> Yes you come to rec radio cb and start asking about amplifiers.

I'm not sure whether you're speaking rhetorically or directly to me. I
was never an amp kinda guy. After doing a little (But not much, mind
you.) homework, I kinda knew from the get-go that running an amp'd be
more headache than help. Even in my "naughtiest" days, 30 watts was
QRO for me. I'll likely never run more than 100 watts on HF. I just
can't justify the capital outlay for 1500 watts.

> > Good luck with that Uniden. They make awfully good units. I
> > wouldn't be surprised if that Uniden eventually leads you toward an

>
> Yeah have him ask Nebo for the mods for the icom or kenwood Bert

Twelve watts on the Uniden will suffice nicely. I've said this before
and I'll say it again. I personally have no problem with someone who
runs a Yaesu/Icom/Kenwood on the legal 40 (Or the "freeband," for that
matter.) at 30 wattsa or less. I've made the personal choice to "fly
right." I'd advise anybody to do the same. It's your choice as to
whether or not you're willing to take that risk. I'm NOT! Now hop on
the 10-meter Novice/Tech+ sub-band on AM or run that "full gallon"
from a "dirty" pump driven by a "peak-n-clip" special and I'll drop a
dime on you myself.

Leland where do you get your firearms knowledge from??? you talk of "FICTION" when it concerns guns.You claim a 45ACP jams ,really says you,the standard Colt M1911 in our armed forces for over 60 years a jammer? look again,my springfield M1911 will chamber "empty" cases,not accuate?? again says you the 45ACP for years has been the choice of "BULLSEYE" shooters,50 yard targets one hand hold, new M1911 from better gunsmiths will and do shoot 1 1/2" groups at 50 yards! but then you says revolvers have more velousity since they dont have a slide to lose power? WRONG again Leland, in a spring/recoil op pistol (M1911) the slide does not start to move until the bullet left the muzzle,not a nano second before, the revolver has a 0.30" GAP between the face of the cylinder and the barrel,do you think that that space could "leak" high pressure gas??? when the bullet makes that jump across into the barrel there is a major loss of 'Power",I could go on for days about firearms with you or anyone else who thinks they are an expert,,wrong information is wrong period.

Fair enough. Probably also should admit this was during the 1958 cycle
when MUF on some paths made it over 70 MHz. What a rockcrusher; at first
I thought he was about six blocks away.

Fred first of all I'll admit I'm not a weapons expert. Second I did not mention any specific manufacture either. I'll take your word that the models you mention work fine, however I suspect there maybe others who may want to debate the points you make and possibly disagree with you. All I can relate is the information I learn from others who have a great deal more experience with firearms. It seems that their experience is a bit at odds with yours for what ever the reason.

I didn't think this happened on hf bands (like 11 and 10 meters) - I've seen tropospheric ducting before on vhf bands (especially on 6 meters) though - quite the phenomenon.

Did anybody every come up with a mod to make the Sidewinder 400
stay on the band/frequency that it was on when turned off then back on.
This is a real pain.
Thanks in advance
Tony

That's true for a given setup for one guy. The trouble comes in to play when you try to compare one setup with another of a significaly different antenna configuation.

> Or
> was the topic really about measuring the comprehensive field strenth
> of a signal and I just misread the post?

If the antenna array used by each "contestant" is not the same then it's a hit or miss deal trying to determine what the direction where the max signal strength is located. Same goes for ERP. One guy may get unlucky and have the receiver located in a minor, or major, null in his antenna pattern. This really gets complicated when you're dealing with a muti-antenna array. Different amounts of power and lengths of coax cable connecting the transmitter to several antennas can do wonders to generate field patterns you just would not believe.

Jay I know I said the picnic would be neutral turf but I can't in all good conscience sponsor/help organize a "keydown". If you want to demo your keyclown mobile setups (and someone wants to bring a spectrum analyzer and run some tests) I won't squawk, but it's not fair to the AKC's to turn the whole deal into an illegal 'keydown'.

i am painfully aware of this - and i DID try to mount the Antron on
the roof one Saturday morning, but about 6 of my neighbors came out
holding pitchforks, brooms, and torches walking menacingly toward my
ladder :)

so if i'm horizontal, it's a bit more of a feat considering how i'm
cutting my output down severley - but still making contact!

about 15 minutes ago, i made contact with someone in the "Buckeye
State" who claimed i was 9 bars and advised me "don't touch anything
on that radio! you're making the trip!"

does it make a difference that the Antron is laying horizontal across
a wooden latticework patio, about 12 feet off the ground? that is, as
opposed to laying it flat across a concrete slab?

Let the man go, Chris, he just

yep - definitely felt that "kick".

i've been a Tech for about 1 year, and i'm ready to take the CW portion to move to HF - just don't have much money for a 10m rig, so i'm going to take my time cruising the swaps and stuff.

by the way, if anyone else is reading who thinks CW is a "barrier" to doing HF - you have NO idea how easy Morse is.

i am up to 12wpm, and know pretty much all the characters like the back of my hand - just need to get to a VEC before i start forgetting them again!

Along those lines, I guess I should complain about the multi-hundred
thousand watt VHF TV towers that are in an area south of Houston near here,
huh? They are located squarely in a residential area.

Folks, HF radiation is just not THAT dangerous! Be much more concerned about
the hundreds of microwave link paths you cross each day! The data is there.
Also be much more concerned about those VHF and especially UHF HT's many of
hold up to your heads, and wear on your belts as geek badges!

1383. OT: Most Functional Word

Newsgroup: rec.radio.cb
Date: 2002-02-16 00:36:28 UTC
From: arcweb@bnnorth.net
Message-ID: <3c6da986.597301@news.bright.net>
Source record: 115703

What's the most functional word in the English Language?

Well, it's shit........ That's right, shit! Shit may just be the most functional word in the English language.

Consider:

You can be shit faced, shit out of luck, or have shit for brains.

With a little effort, you can get your shit together, find a place for your shit or decide to shit or get off the pot.

You can smoke shit, buy shit, sell shit, lose shit, find shit, forget shit, and tell others to eat shit and die.

Some people know their shit, while others can't tell the difference between shit and shineola.

There are lucky shits, dumb shits, crazy shits, and sweet shits.

There is bull shit, horse shit and chicken shit.

You can throw shit, sling shit, catch shit, shoot shit, or duck when shit hits the fan.

You can give a shit or serve shit on a shingle.

You can find yourself in deep shit or be happier than a pig in shit.

Some days are colder than shit, some days are hotter than shit, and some days are just plain shitty.

Some music sounds like shit, things can look like shit, and there are times when you feel like shit.

You can have too much shit, not enough shit, the right shit, the wrong shit or a lot of weird shit.

You can carry shit, have a mountain of shit, or find yourself up a shit creek without a paddle.

Sometimes everything you touch turns to shit and other times you fall in a bucket of shit and come out smelling like a rose.

When you stop to consider all the facts, it's the basic building block of creation.

And remember, once you know your shit, you don't need to know anything else!

You could pass this along, if you give a shit!

From: arcweb@bnnorth.net
Message-ID: <3c6da9fa.712763@news.bright.net>
Source record: 115704

One night One night a guy takes his girlfriend home. As they are about to kiss each other goodnight at the front door, the guy starts feeling a little horny. With an air of confidence, he leans with his hand against the wall and smiling, he says to her."Honey, would you give me a blow job??" Horrified, she replies, "Are you mad? My parents will see us!"
"Oh come on! Who's gonna see us at this hour?"
"No, please. Can you imagine if we get caught?"
"Oh come on! There's nobody around, they're all sleeping!"
"No way. It's just too risky!"
"Oh please, please, I love you so much?!"
"No, no and no! I love you too, but I just can't!"
"Oh yes you can. Please?"
"No, no. I just can't"
"I'm begging you .."

Out of the blue, the light on the stairs goes on, and the girl's sister shows up in her pyjamas, hair dishevelled, and in a sleepy voice she says,"Dad says to go ahead and give him a blow job,or I can do it. Or if need be, Mum says she can come down herself and do it. But please, tell him to take his hand off the intercom."

Yes.

There is a kit available to do it, if you don't have the knowlege to do it yourself. I don't know about the availability of the kit now, though.

> Why does Tim and Toll Free etc think a keydown is a ERP measuring contest?

Because all else being equal, the person with the highest Effective Radiated Output will win.

> If I throw a 20 kw deadkey I will have more erp than a guy who i talks 10
> kw but his modulation will cut my lips off.

Because at 10 Kw, if your 100 percent modulating the transmitter, your PEP will be close to 40
grand output.

keydowns are more than ERP
> contests, Thats why over modulated radios work the best.

That's bullshit.

>
> Audio is what wins keydowns, it is who the judge(watergate) hears that is
> how a winner is determined.

Not always, but that is the basic premise.

I know the top builders in the keydown field and
> not one of them uses a spectrum analyzer to tune an amp for a keydowns, why
> should they .

lol

That goes from Ghostrider to Blue gill to davemade to xforce
> to noname not one of them does this.

Not all the people building do the designing.

Daves amps (and X-Force) where tuned using a spec an. Don't beleive me, ask Concrete Man. He and I had a long talk about it in the past.

Bluegill, he got his basic amplifier skills from #12. I don't know Ghost all that well,
and haven't made it to his shop yet so I can't comment on his style of building.

Not really.

The ERP will be greater on the modulated signal, since the PEP value goes up with modulation.

Goes back to that whole thing where Sparky said PEP ratings have nothing to do with AM.

Would you think a 16 watt PEP signal would walk on a 10 watt carrier?

That 16 watt PEP signal will only be doing about 4 watts RMS power, though... Can 4 watts beat 10?

If your lights dim, you aren't swinging backwards... They will get
brighter, due to the fact the amp is putting out less power.

If your pulling more amperage, and still swinging backwards on modulation,
you need to check the tuning of the amplifier in and output stages.

Yes

And the receiver is sitting at the other end of the
> parking lot, right?

No. They are usually located miles away.

Now if the receiver is replaced with a FSM, why
> does take-off angle suddenly make a difference?

None of what you asked is related. Your misguidance was because you thought
the person was near field that
was making the measurements. Keydowns are usually judged from miles away,
not from a parking lot distance.

Otherwise, the top loaded antenna would win :)

Message-ID: <3C6DAFBE.E19A53F1@ultrasw.com>
Source record: 115712

Following up on some good suggestions, I got my el-cheapo multimeter out today and checked AC voltage at the nearest outlet.

It read 136 volts!!! I was expecting somewhere close to 120, so I called my power company (8:18 A.M. local time) and asked about the high voltage reading and whether they could check connections at the meter.

They would be here within four hours. At noon got call that they would be here at 1:00 P.M. Shortly after 1:00, got call that they had emergency and .....

Anyhow, what is groups best thoughts on the ramification of high voltage? I am assuming my meter is not real accurate, but I seem to recall checking AC voltage when I purchased it, and it was around 120.

Thanks in advance,

Ace

1397. SAT scores

Newsgroup: rec.radio.cb
Date: 2002-02-16 01:04:39 UTC
From: arcweb@bnnorth.net
Message-ID: <3c6db019.2280602@news.bright.net>
Source record: 115719

this was posted in rec.radio.amateur.equipment, it was just too funny
to not share here.

Hey Dave, where is it you live? :P <jk>

The following questions and answers were
collected from SAT tests given in Springdale,
Arkansas in 2000 to 16 year old students! (Don't
laugh too hard - one of these may be the
president someday.)

Q: Name the four seasons.
A: Salt, pepper, mustard and vinegar.

Q: Explain one of the processes by which water
can be made safe to drink.
A: Flirtation makes water safe to drink because
it removes large pollutants like grit, sand, dead
sheep and canoeists.

Q: How is dew formed?
A: The sun shines down on the leaves and makes
them perspire.

Q: What is a planet?
A: A body of earth surrounded by sky.

Q: What causes the tides in the oceans?
A: The tides are a fight between the Earth and
the Moon. All water tends to flow towards the
moon, because there is no water on the moon, and
nature abhors a vacuum. I forget where the sun
joins in this fight.

Q: In a democratic society, how important are
elections?
A: Very important. Sex can only happen when a
male gets an election.

Q: What are steroids?
A: Things for keeping carpets still on the
stairs.

Q: What happens to your body as you age?
A: When you get old, so do your bowels and you
get intercontinental.

Q: What happens to a boy when he reaches puberty?
A: He says good-bye to his boyhood and looks
forward to his adultery.

Q; Name a major disease associated with
cigarettes.
A: Premature death.

Q: How can you delay milk turning sour?
A: Keep it in the cow.

Q: How are the main parts of the body
categorized? (E.g., abdomen.)
A: The body is consisted into three parts - the
brainium, the borax and the abdominal cavity.
The branium contains the brain, the borax
contains the heart and lungs, and the abdominal
cavity contains the five bowels, A,E,I,O and U.

Q: What is the Fibula?
A: A small lie.

Q: What does "varicose" mean?
A: Nearby.

Q: What is the most common form of birth control?
A: Most people prevent contraception by wearing a
condominium.

Q: Give the meaning of the term "Caesarean
Section."
A: The caesarean section is a district in Rome.

Q: What is a seizure?
A: A Roman emperor.

Q: What is a terminal illness?
A: When you are sick at the airport

Q: Give an example of a fungus. What is a
characteristic feature?
A: Mushrooms. They always grow in damp places
and so they look like umbrellas.

Q: What does the word "benign" mean?
A: Benign is what you will be after you be eight.

Q: What is a turbine?
A: Something an Arab wears on his head.

Q: What is a Hindu?
A: It lays eggs.

Nobody around here complains. Didn't in my area in Texas, either.

And yes, I have asked. Your still thinkin I run all class C, though.
That's your
mistake, your ASSumptions.

>
> No? I thought not.

ASSumption

>
> >>>>>> Anybody got any "factual" traceable evidence to support any
> > > > > > fatalities or even "near misses" because of this practice?
>
> Isn't it enough that the potential exists?

Yup

Corvettes also exceed the speed limit. Does that mean that everyone who
drives
one should be given a ticket each time they take it out of the garage?

Or that any amateur who purchases a radio should be considered a freebander,
since most amateur rigs are capable of freeband operation?

Or the possibilities of someone using a gun.. Man! All gun owners are now
cold blooded murderers, since the <<potential>> exists.

>
> You want a FATALITY to happen before you'll cease illegal and

> disruptive operation?

Nope, I don't hope that at all.

I just like to show you like to blow things out of proportion.

>

Yes, class C is more efficient for carrier but depending how far beyond class B you go you can reduce the modulation percentage with class C. Some of the No-names according to their hilarious website are perfectly capable of taking a 100% modulated signal and turning it into 20% modulation plus the obligatory crap.

Bullshit, the 20kw rms carrier is twice the power of the 10 kw rms modulated
signal so the erp is greater from the 20 kw signal. Where is old #12 when
you need him.

> Goes back to that whole thing where Sparky said PEP ratings have nothing

> Would you think a 16 watt PEP signal would walk on a 10 watt carrier?
> That 16 watt PEP signal will only be doing about 4 watts RMS power,
> though... Can 4 watts beat 10?

In a keydown the way they are currently set-up, yes it can because they are
judged on who is heard at the recieving end , in a erp contest Ill take the
10 watt carrier over the 4 watt rms

I have asked this question and got no answers except from Tim saying he
will key up at 20 kw and talk back to 15 and he wants to be 2 khz away ???
Go figure

Thats the problem in a keydown all elses is not equal, everyones radio is tuned differently, different modulation percentages, everyone runs different antenna systems right. So how is it a ERP measuring contest, it is a contest to see who is heard. If we both have the same ERP who wins ? What if my erp is the same as yours but I am only modulating at 50% and you at 120% who will win? The point remains it is not a ERP contest solely

Hello Jeff: Is I don't know G.I.!?!?!?

I accidentally replied to a guy asking for someone to send him the assembly instructions for a Sigma 4 antenna. I posted then to the ng and meant to just reply to the guy.

And obviously theres a use net address that will allow you to see all the photos posted, but I thought you werent supposed to post photos?

Again I have a hole key board of wrong keys. Good thing I haven't posted some of the hot stuff I sent the girl friend!!! Wow baby!

The Definition of "Soviet" means REVOLUTIONARY. That means they STOLE land from the POOR people to make their communist system, which they have NOT given back yet, because they KILLED most of the owners of that land. WE DON'T CARE what the "media" calles them, they are still United Socialist Soviet Republics, just like the Soviet STATE you live in NOW !
Dave!!!!!!!!!!!!!!!!!

1420. I thought of something that you HAMBOS really should worry about!

Newsgroup: rec.radio.cb

Yep, the other day I thought of what you Hamboz should REALLY worry about! Some other post has you worrying about not many Hams getting into Hamboland these days.
What you should REALLY worry about is that maybe not too many people getting on to the CB band these days, which will graduate to the "Free Band," which may become Hambos some day! I wonder which percent of the Hams came from the Free Bands! More than what came from the Magazines, I guess! The degeneration of society, caused by the NEA Teachers Union, plus the commies in control of the TV bands, have lead to the general decline of ALL the Freq. bands, including CB. Maybe IF we get rid of the NEA, the TV bands (ALL of them, including cable), and God's people DO 2 Chron. 7: 14, then just MAYBE we will get our country back! If not, I hear they are trying to take away our 1st Amendment rights, under the guise of "fighting terrorism." ONLY the Terrorists will even DARE to take away any of our Bill of Rights! What ALL the "terrorists" need to FEAR and worry about is the Terror of the Lord Jesus Christ! Read about it in the King James Bible and you will learn whom it is that we should really have to fear!
Dave!!!!!!!!!!!!!!!!!!!!!

Wrong....you need to check the other leg. You have a 240 volt service, and should read no more than 127 to ground on each hot leg, and no more than 255 between them.

Sorry about the HTML Doc. I turned it off. Kinda like the effect you have on some of the folks that frequent the newsgroups I've noticed. As far as $500.00 being too much for a Browning, I don't believe you have ever had or seen a Browning as nice as the one I have up for sale! If you had, you would understand why I am asking that amount. I have seen them go for much more also. And don't forget I'm including a Siltronics Model 90 VFO in that price. If the VFO were sold separate it would bring $60.00 to $75.00 so that brings down the price of the Browning to $425.00. You like that price better? Thanks Jeff, for explaining to Doc about the laws of supply and demand. Unlike some people, I am not out here to offend anyone or to argue with anyone. I think we have enough controversy and negative attitudes out here as it is already. I'll just play my little piano and sing my little song as best as I can and leave the rest up to others.................."Porky"

No but I did speak with the principal at Tracey Elementary. She was
VERY interested to hear that "those guys in the trucks" were directing
upwards of 50,000 watts of RF at kids in the playground and the park.

OK, Now does anybody know where I can get a kit?
I think I have the ability to do this myself, IF I just knew WHERE
the parts need to be added to supply voltage to the Microprocessor when the
radio is turned off. Should only take a couple of diodes and a voltage
source.
Is there somewhere to get a circuit diagram of this radio.
Thanks
Tony

Yeah it's a TA now. It's an ok place but you gotta get in before 4 pm to get a parking space.

Hahaha I was there just recently. I heard a cb shop advertising on ch 19. It was B.Good's place. He was bragging on what he and his shop could do for your radios and invited anyone who wanted radio work to go to another ch. I went to that ch. and after he got thru with a couple guys I started playing devils advocate. I had fun with him.I didn't do any of that legal vs. illegal crap. I went straight to his ego about the feasibilities and how much of a waste of time it was for the "gimmick" things he was doing. He and his helper were hot under the collar. I mean they were talking some shit by the time I got thru . ahahahah At the end of it all, he fessed up that his spec analyzer,of which he bragged heavily on, was broken and not available. At the end I told him I was just screwing with him and after he calmed down he invited me to visit with him because it had been a long time since anyone could challenge him in a tech debate. I never did go but seeing the TA mentioned here just brought back a fond memory.

Haven't been to that part of CA in about 5 years... Haven't been over the
road in 3... I guess things are bound to change..
